Cardiovascular Physiology in the Genetically Engineered Mouse Brian D. Hoit, Richard A. Walsh, 2001-10-31 The enormous advances in molecular biology and genetics coupled with the progress in instrumentation and surgical techniques have produced a voluminous and often bewildering quantity of data The need for a second edition of Cardiovascular Physiology in the Genetically Engineered Mouse is underscored not only by these rapid advances but by the increasing numbers of scientists who have focussed their research on genetically engineered mice It is the primary objective of this second edition to interpret critically the literature and to provide a framework for the enormous amount of information in this burgeoning field As in the first edition the monograph serves as a practical guide for the

investigator interested in the functional methods used to characterize the murine cardiovascular phenotype However this guidebook is a more comprehensive text than its predecessor although the major objectives enumerated in the first edition have not substantially changed they have been refined in keeping with the increased sophistication of the molecular biologist geneticist and physiologist in each other s discipline Each chapter has been expanded and updated richly enhanced with original tables and figures and in many cases extensively rewritten Eight chapters written by internationally recognized experts have been added this represents a 43 % increase from the first edition

Masters, 2007-12-14 Despite the significant decline in heart disease mortality rates over the last 25 years heart failure has remained a significant problem We are now confronted with large numbers of terminally ill patients for whom conventional therapies for heart failure have been exhausted and for whom repeated hospital visits are necessary There now is a major thrust towards a management strategy which embraces a comprehensive approach including vigorous preventive measures and earlier surgical interventions This book outlines the major surgical options for the treatment of heart failure and brings together a very broad base of opinions with contributions from several outstanding individuals With the improved knowledge and techniques to control rejection transplantation has become the central pillar in the surgical management of this group of patients Unfortunately because of

limited donor supply the technique cannot be applied to large numbers of patients. A great deal of excitement however exists in the potential for xenotransplantation as a supplement to homotransplantation. The use of cardiac assist devices has become a reality with several hundred LVADS and BiVADS implanted throughout the world and cardiac replacement with total artificial hearts continues to be used successfully as a bridge to transplantation. We are on the threshold of the broad application of assist devices to provide prolonged relief of heart failure and restore patients to an ambulatory home environment and hopefully return to the work force in significant numbers.
