convergent approach adds to theory model formulation above and beyond the contribution of individual component methods We expect that such combinations of approaches will significantly forward theoretical development in the field The present research topic comprise a collection of manuscripts discussing the cognitive and neural organisation of speech processing including speech production and perception at the level of individual speech sounds syllables words and sentences Our goal was to use findings from a variety of disciplines perspectives and approaches to gain a more complete picture of the organisation of speech processing The contributions are grouped around the following five main themes 1 Spoken language comprehension under difficult listening conditions 2 Sub lexical processing 3 Sensorimotor processing of speech 4 Speech production The contributions used a variety of research approaches including behavioural experiments fMRI EEG MEG and TMS Twelve of the 14 contributions were on speech perception processing and the remaining two examined speech production This Research Topic thus displays a wide variety of topics and research methods and this comprehensive approach allows an integrative understanding of currently available evidence as well as the identification of concrete venues for future research
