**Web Service Mining** George Zheng,Athman Bouguettaya,2010-06-14 The new computing environment enabled by advances in service oriented architectures mashups and cloud computing will consist of service spaces comprising data applications infrastructure resources distributed over the Web This environment embraces a holistic paradigm in which users services and resources establish on demand interactions possibly in real time to realise useful experiences Such interactions obtain relevant services that are targeted to the time and place of the user requesting the service and to the device used to access it The benefit of such environment originates from the added value generated by the possible interactions in a large scale rather than by the capabilities of its individual components separately This offers tremendous automation opportunities in a variety of application domains including execution of forecasting of ce tasks travel support intelligent information gathering and analysis environment monitoring healthcare e business community based systems e science and e government A key feature of this environment is the ability to dynamically compose services to realise user tasks While recent advances in service discovery

composition and Semantic Web technologies contribute necessary first steps to facilitate this task the benefits of composition are still limited to take advantages of large scale ubiquitous environments The main stream composition techniques and technologies rely on human understanding and manual programming to compose and aggregate services Recent advances improve composition by leveraging search technologies and flow based composition languages as in mashups and process centric service composition

**The Search for Biological Active Agent(s) From Actinobacteria, 2nd Edition** Learn-Han Lee,Kok-Gan Chan,Jem Stach,Elizabeth M. H. Wellington,Bey-Hing Goh,2020-03-27 There is a large market demand for new drugs The existing chronic or common ailments without cures development of new diseases with unknown causes and the widespread existence of antibiotic resistant pathogens have driven this field of research further by looking at all potential sources of natural products To date microbes have made a significant contribution to the health and well being of people globally The discoveries of useful metabolites produced by microbes have resulted in a significant proportion of pharmaceutical products in today s market Therefore the investigation and identification of bioactive compound s producing microbes is always of great interest to researchers Actinobacteria are one of the most important and efficient groups of natural metabolite producers Among the numerous genera Streptomyces have been recognized as prolific producers of useful natural compounds as they provide more than half of the naturally occurring antibiotics isolated to date and continue to emerge as the primary source of new bioactive compounds Certainly these potentials have attracted ample research interest and a wide range of biological activities have been subsequently screened by researchers with the utilization of different In vitro and In vivo model of experiments Literature evidence has shown that a significant number of interesting compounds produced by Actinobacteria were exhibiting either strong anticancer or neuroprotective activity The further in depth studies have then established the modulation of apoptotic pathway was involved in those observed bioactivities These findings indirectly prove the biopharmaceutical potential possessed by Actinobacteria and at the same

time substantiate the importance of diverse pharmaceutical evaluations on Actinobacteria. In fact, many novel compounds discovered from Actinobacteria with strong potential in clinical applications have been developed into new drugs by pharmaceutical companies. Together with the advancement in science and technology, it is predicted that there would be an expedition in discoveries of new bioactive compounds producing Actinobacteria from various sources including soil and marine sources. In light of these current needs and great interest in the scope of this research, this book seeks to contribute on the investigation of different biological active compounds producing actinobacteria which are exhibiting antimicrobial, antioxidant, neuroprotective, anticancer activities and similar.

### **Health Care Systems Engineering** Paola

Cappanera, Jingshan Li, Andrea Matta, Evren Sahin, Nico J. Vandaele, Filippo Visintin, 2018-01-29. This book presents statistical processes for health care delivery and covers new ideas, methods, and technologies used to improve health care organizations. It gathers the proceedings of the Third International Conference on Health Care Systems Engineering HCSE 2017, which took place in Florence, Italy, from May 29 to 31, 2017. The Conference provided a timely opportunity to address operations research and operations management issues in health care delivery systems. Scientists and practitioners discussed new ideas, methods, and technologies for improving the operations of health care systems developed in close collaborations with clinicians. The topics cover a broad spectrum of concrete problems that pose challenges for researchers and practitioners alike: hospital drug logistics, operating theatre management, home care services, modeling, simulation, process mining, and data mining in patient care and health care organizations.

*Biosynthesis and Molecular Genetics of Fungal Secondary Metabolites, Volume 2* Susanne Zeilinger, Juan-Francisco Martín, Carlos García-Estrada, 2015-06-15. Fungi produce many chemically diverse secondary metabolites whose biological roles largely remain elusive. Within the increasing number of sequenced fungal genomes, several important genes involved in secondary metabolite formation have been identified. Most of these genes are clustered, and their coordinated transcription is controlled in a complex way by both narrow pathway-specific regulators as well as broad global transcription factors responsive to environmental cues. In recent years, it was discovered that many of the newly identified gene clusters are silent under laboratory conditions, suggesting that the biosynthetic potential of fungi is far from being exploited. Besides identifying novel bioactive metabolites from still unexplored sources, the activation of these gene clusters by several approaches may result in the discovery of new substances with antibiotic and pharmaceutical benefits. This book covers recent advances in the field of fungal secondary metabolisms, ranging from methodologies to biological aspects, and will include the latest knowledge on fungal molecular biology, genomics, and metabolomics. With the related volume by Professor Juan Francisco Martín, where the most relevant and well-studied fungal secondary metabolites are compiled, this book provides a comprehensive overview of the state of the art of research on fungal secondary metabolites.
