

7. Реактивност и резистентност на организма - същност, значение. Фактори влияещи върху реактивността и резистентността. Видове реактивност и резистентност. Форми на резистентността.

Уникалната способност на живите организми е приспособителната изменчивост- биопластичност, чрез непрекъснатата промяна- алостаза. Изявява се чрез формите си: дразнимост, възбудимост и реактивност. Реактивността и резистентността отразяват взаимодействието организъм/среда.

Реактивността е способността на живата материя да изменя своята жизнена активност под влияние на различни на дразнители.

Резистентността е свойството да противодейства и да проявява устойчивост към техните въздействия.

Разнообразните външни и вътрешни фактори променят реактивността и резистентността

- Външни- космически въздействия, лъчения(UV лъчи), рязко променящи се климатични обстановки.
- Вътрешни- гено- и фенотип, пол, възраст, конституция, тип нервна система(всеки тип нервна система е свързан с определена патология)

Видове реактивност

- Биологична или видова- неболедуване на човека от чумата при рогатия добитък.
- Индивидуална- наследственост, конституция, възраст, пол, хранене.
- Физиологична-неутрализира действието на дразнителя и запазва хомеостазата.
- Патологична-недостатъчността на приспособителните възможности на организма.
- Неспецифична- общи механизми на реагиране и защита(стрес и дистрес, треска, гърчова реакция, стресови протеини- шаперони.)

Стадий на адаптация- преодоляване и адаптация на патогенното действие, активиране на хипоталамо- хипофизно- надбъбречната система.

Стадий на изтощение- ако ноксите продължат да въздействат върху организма в даден момент настъпва вторична декомпенсация на адаптациите, завършва със срив на жизнените функции.

Видове реактивност: нормергична, хиперергична, анергична.

Основни форми на резистентност

- Вродена(естествена), напр. остро възпаление.
- Придобита(адаптивна)- висока специфичност.

Реализирането и на двата типа се основава на компоненти и механизми за:

- Разпознаване на ноксата-патогения дразнител.
- Задвижване на сложни верижни мрежи от контролирани и взаимосвързани събития които порождаат неспецифично или специфично противодействие на патогения агент
