Pattern Recognition And Artificial Intelligence:

Advances In Pattern Recognition And Artificial Intelligence Marleah Blom, Nicola Nobile, Ching Yee Suen, 2021-11-16 This book includes reviewed papers by international scholars from the 2020 International Conference on Pattern Recognition and Artificial Intelligence held online. The papers have been expanded to provide more details specifically for the book. It is geared to promote ongoing interest and understanding about pattern recognition and artificial intelligence. Like the previous book in the series, this book covers a range of topics and illustrates potential areas where pattern recognition and artificial intelligence can be applied. It highlights, for example, how pattern recognition and artificial intelligence can be used to classify, predict, detect, and help promote further discoveries related to credit scores, criminal news, national elections, license plates, gender, personality characteristics, health, and more. Chapters include works centred on medical and financial applications as well as topics related to handwriting analysis and text processing, internet security, image analysis, database creation, neural networks, and deep learning. While the book is geared to promote interest from the general public, it may also be of interest to graduate students and researchers in the field.

Joint Workshop on Pattern Recognition and Artificial Intelligence (1976 : Hyannis, 1976 Pattern Recognition in Practice II L.N. Kanal, E.S. Gelsema, 2012-12-02 The 1985 Amsterdam conference brought together researchers active in pattern recognition methodology and the development of practical applications. The first part of the book covers various methodological aspects of image processing, knowledge based and model driven image understanding systems, 3D reconstruction methods, and application oriented papers. Part II deals with aspects of statistical pattern recognition, the problem of population classification, and topics common to both pattern recognition and artificial intelligence.

Frontiers In Pattern Recognition And Artificial Intelligence Marleah Blom, Nicola Nobile, Ching Yee Suen, 2019-06-17 The fifth volume in this book series consists of a collection of new papers written by a diverse group of international scholars. Papers and presentations were carefully selected from 160 papers submitted to the International Conference on Pattern Recognition and Artificial Intelligence held in Montreal, Quebec, May 2018, and an associated free public lecture entitled *Artificial Intelligence and Pattern Recognition: Trendy Technologies in Our Modern Digital World*. Chapters address topics such as the evolution of AI, natural language processing, off and on line handwriting analysis, tracking and detection systems, neural networks, rating video games, computer aided diagnosis, and digital learning. Within an increasingly digital world, artificial intelligence is becoming a household term and a topic of great interest to many people worldwide. Pattern recognition, in using key features to classify data, has a strong relationship with artificial intelligence. This book not only complements other monographs in the series, it also provides the latest information. It is geared to promote interest and understanding about pattern recognition and artificial intelligence to the general public. It may also be of interest to graduate students and researchers in the field.

Rather than focusing on one specific area the book introduces readers to various basic concepts and to various potential areas where pattern recognition and artificial intelligence can be applied to make valuable contributions to other fields such as medicine teaching and learning forensic science surveillance online reviews computer vision and object tracking
