Patterning Of Time:

Patterning of Time Leonard William Doob, **Electrohydrodynamic Patterning of Functional Materials** Pola Goldberg Oppenheimer, 2013-07-23 This thesis explores a route to induce and control the structure formation process in thin films by the use of strong electric fields We investigate establish and apply the use of the electrohydrodynamic EHD lithography as a versatile patterning tool on the sub micrometre and nanometre length scales for functional materials Thin films are ubiquitous they are found in nature and used in almost every aspect of daily life While film instabilities are often undesirable in nature and technology they can be utilized to produce structures by precisely controlling the destabilization of the film EHD lithography utilizes instabilities induced by means of an electric field to fabricate periodic structures EHD patterning is set to become a competitive candidate for low cost lithographic technology for a number of applications Herein the applied potential of this lithographic process is explored by expanding its applicability to a broad range of materials and by a simultaneous patterning of multilayer systems or functional polymers yielding hierarchical architectures with novel functionalities EHD pattern formation enables for instance the fabrication of multi scale structured arrays as surface enhanced Raman scattering SERS active platforms Furthermore crystalline and conductive polymers are patterned using the EHD approach and the underlying structure formation mechanisms are discussed This extension towards functional material systems offers interesting prospects for potential applications Findings of this thesis are very promising for use in optoelectronic devices

Using Time Series to Analyze Long-Range Fractal Patterns Matthijs Koopmans, 2020-09-23 Using Time Series to Analyze Long Range Fractal Patterns presents methods for describing and analyzing dependency and irregularity in long time series Irregularity refers to cycles that are similar in appearance but unlike seasonal patterns more familiar to social scientists repeated over a time scale that is not fixed Until now the application of these methods has mainly involved analysis of dynamical systems outside of the social sciences but this volume makes it possible for social scientists to explore and document fractal patterns in dynamical social systems Author Matthijs Koopmans concentrates on two general approaches to irregularity in long time series autoregressive fractionally integrated moving average models and power spectral density analysis He demonstrates the methods through two kinds of examples simulations that illustrate the patterns that might be encountered and serve as a benchmark for interpreting patterns in real data and secondly social science examples such as a long range data on monthly unemployment figures daily school attendance rates daily numbers of births to teens and weekly survey data on political orientation Data and R scripts to replicate the analyses are available on an accompanying website

Noering,2022-03-23 In the last decade unsupervised pattern discovery in time series i e the problem of finding recurrent similar subsequences in long multivariate time series without the need of querying subsequences has earned more and more attention in research and industry Pattern discovery was already successfully applied to various areas like seismology medicine robotics or music Until now an application to automotive time series has not been investigated This dissertation fills this desideratum by studying the special characteristics of vehicle sensor logs and proposing an appropriate approach for pattern discovery To prove the benefit of pattern discovery methods in automotive applications the algorithm is applied to construct representative driving cycles **Real-time Design Patterns** Bruce Powel Douglass,2003 This revised and enlarged edition of a classic in Old Testament scholarship reflects the most up to date research on the prophetic books and offers substantially expanded discussions of important new insight on Isaiah and the other prophets **Design Patterns for Embedded Systems in C** Bruce Powel Douglass,2010-11-03 A recent survey stated that 52% of embedded projects are late by 4 5 months This book can help get those projects in on time with design patterns The author carefully takes into account the special concerns found in designing and developing embedded applications specifically concurrency communication speed and memory usage Patterns are given in UML Unified Modeling Language with examples including ANSI C for direct and practical application to C code A basic C knowledge is a prerequisite for the book while UML notation and terminology is included General C programming books do not include discussion of the constraints found within embedded system design The practical examples give the reader an understanding of the use of UML and OO Object Oriented designs in a resource limited environment Also included are two chapters on state machines The beauty of this book is that it can help you today Design Patterns within these pages are immediately applicable to your project Addresses embedded system design concerns such as concurrency communication and memory usage Examples contain ANSI C for ease of use with C programming code
