Patterns Of Action:

Spatial Temporal Patterns for Action-Oriented Perception in Roving Robots Paolo Arena, Luca Patanè, 2008-12-19 The basic principles guiding sensing perception and action in bio systems seem to rely on highly organised spatial temporal dynamics In fact all biological senses visual hearing tactile etc process signals coming from different parts distributed in space and also show a complex time evolution As an example mammalian retina performs a parallel representation of the visual world embodied into layers each of which represents a particular detail of the scene These results clearly state that visual perception starts at the level of the retina and is not related uniquely to the higher brain centres Although vision remains the most useful sense guiding usual actions the other senses first of all hearing but also touch become essential particularly in cluttered conditions where visual percepts are somehow obscured by environment conditions Efficient use of hearing can be learnt from acoustic perception in animals insects like crickets that use this ancient sense more than all the others to perform a vital function like mating

Action Patterns in Business Process Models Sergey Smirnov, Weidlich, Matthias, Mendling, Jan, Weske, Mathias, 2009 Business process management experiences a large uptake by the industry and process models play an important role in the analysis and improvement of processes While an increasing number of staff becomes involved in actual modeling practice it is crucial to assure model quality and homogeneity along with providing suitable aids for creating models In this paper we consider the problem of offering recommendations to the user during the act of modeling Our key contribution is a concept for defining and identifying so called action patterns chunks of actions often appearing together in business processes In particular we specify action patterns and demonstrate how they can be identified from existing process model repositories using association rule mining techniques Action patterns can then be used to suggest additional actions for a process model Our approach is challenged by applying it to the collection of process models from the SAP Reference Model

Flexibility in the Parts-of-Speech System of Classical Chinese

Linlin Sun, 2020-02-10

Languages across the world differ from each other in a number of respects and one such difference is in terms of how their lexicons are categorized Compared to most European languages with distinct functionally dedicated word classes in the traditional sense quite a few languages are observed to possess lexical items that can fulfill the functions typically associated with more than one traditional word class such as noun and verb According to Rijkhoff and van Lier 2013 these lexemes exhibit what is called flexibility Classical Chinese is observed to feature word class flexibility in the sense that there are lexemes that can be used to serve the functions of two or more traditional word classes without the functional change being marked by any derivational means For instance a lexical item like x n can either function as a verb meaning to be trustworthy intr or to believe to trust tr or serve as a noun meaning trust oath of alliance Similarly a human denoting lexeme such as y u FRIEND cannot only mean a friend but also to be a friend to behave friendly intr to make friends with tr or to consider as a friend tr an instrument word like bi n WHIP cannot only mean a whip but also to whip This situation is often thought to be related to the fact that Classical Chinese does not have any kind of productive morphology in the traditional sense e g Z drapa 2011 This is reflected in the lack of markedness distinctions across Croft s 2000 2001 conceptual space for parts of speech This study ascribes flexibility of parts of speech in Classical Chinese to precategoriality in line with Bisang 2008 a b Precategoriality can roughly be defined as the absence of the noun verb distinction in the lexicon instead the linking of individual words to the syntactic position of N or V as well as their text frequency in these positions are subject to pragmatics Precategorial lexical items are those that are not preclassified into parts of speech in the lexicon rather their word class specification is ultimately determined at the syntactic level according to their position function in a given word class indicating construction From a diachronic viewpoint this study assumes that precategoriality and categoriality of individual lexical items are not static but that they are potentialities and tendencies that may change over time Specifically full precategoriality and full categoriality are assumed to constitute a continuum in the lexicon of Chinese throughout its history In any given historical period lexical items of the language are distributed between the two extremes on the continuum according to the intensity of the association between their lexical meaning and the syntactic position function of e g N or V Generally along the continuum at a given historical stage lexemes with a strong association between meaning and function i e lexemes that are normally associated only with one word class specification for a particular syntactic role tend to be located close to the extreme of full categoriality In contrast lexemes that are not necessarily related to one specific association between meaning and function but can potentially occur in a variety of such associations are assumed to be placed closer to full precategoriality instead Roughly speaking the group of lexemes that is located towards full

precategoryality are flexible lexemes though with varying degrees of flexibility whose semantics licenses a syntactic variety and can thus be linked to more than one word class specification through syntactic specification a syntactically specified process of category assignment Based on these considerations this study aims to present the results of a corpus based investigation into flexibility of parts of speech in Classical Chinese The research focuses on two types of syntactic specifications of flexible lexemes namely those using action denoting lexemes in nominal function the V N type and those using object denoting lexemes in verbal function the N V type The two types of syntactic specifications are investigated for this study in the five Classical Chinese texts Zuozhuan Mengzi Guoyu Mozi and Zhanguoce Based on empirical facts flexibility of parts of speech in Classical Chinese is addressed at three descriptive levels in this study First at the level of syntax the discussion focuses on the most important syntactic configurations for the use of flexible lexemes and their relations to the basic word order of this language with flexibility being observed in two positions of an argument structure construction the V position and the syntactic position of an argument The findings of this study demonstrate that as far as the argument structure constructions formed with flexible lexemes are concerned VO word order is much more frequent than OV This strong preference for VO is in connection with lexical flexibility explained as follows With the loss of derivational morphology in early stages of Old Chinese e g Sagart 1999 word order became the most important indicator of word class and strongly supported the omission of strict verb noun distinctions co existence of precategoryality and categoryality in the lexicon of this language Second at the level of cognitive semantics e g Lakoff 1987 K vecses and Radden 1998 Sch nefeld 2005 the discussion concentrates on the metonymic relationships that constitute the cognitive semantic foundation of the use of flexible lexemes in Classical Chinese In a metonymic mapping of either the V N or the N V type the original semantics of a lexical item which may typically be associated with a certain syntactic role of N or V is used as a reference point to provide mental access to the newly derived meaning of the item in another syntactic function Given the typologically salient characteristics of Classical Chinese discussed in this book the argument is that the flexible use of an existing word form as a metonymically related but syntactically distinct item is one of the most economic ways in this language to name a new concept or a newly construed situation in discourse Third at the level of argument structure constructions Bisang 2008a b the discussion focuses on how the different metonymic relationships mentioned interact with a given argument structure construction which carries its own meaning within itself and how these are further concretized into rule based or metaphorically motivated pragmatic implicatures A closer examination of an argument structure construction with an object word in the V position reveals that there are two underlying frameworks for deriving the concrete meaning of the construction In the rule based framework the verbal function of a given object word can basically be derived through grammatical analysis of the whole construction In the metaphorical framework the composed semantics of the construction actively interacts with the outside world in our conceptual system where metaphor Lakoff 1987 1993 K vecses 2010 serves as

an essential cognitive principle in establishing and re interpreting relations in the construction The two mechanisms rule based and metaphorical complement each other and work together to account for flexibility in Classical Chinese This study argues that flexibility of parts of speech in Classical Chinese can only be fully understood by integrating a wide range of aspects both linguistic and non linguistic The components that are needed to account for it include constructions form meaning pairings semantics Croft s conceptual space pragmatic implicatures metonymies metaphors as well as world knowledge as reflected within a culture In my view it is reasonable to argue that these components need not be specific to the language investigated here they are applicable to any language that shows flexibility in its parts of speech system
