## **Patterns Of Attachment A Psychological Study Of The Strange Situation:**

Patterns of Attachment Mary D. Salter Ainsworth, Mary C. Blehar, Everett Waters, Sally N. Wall, 2015-06-26 Ethological attachment theory is a landmark of 20th century social and behavioral sciences theory and research. This new paradigm for understanding primary relationships across the lifespan evolved from John Bowlby's critique of psychoanalytic drive theory and his own clinical observations supplemented by his knowledge of fields as diverse as primate ethology, control systems theory, and cognitive psychology. By the time he had written the first volume of his classic Attachment and Loss trilogy, Mary D. Salter Ainsworth's naturalistic observations in Uganda and Baltimore and her theoretical and descriptive insights about maternal care and the secure base phenomenon had become integral to attachment theory. *Patterns of Attachment* reports the methods and key results of Ainsworth's landmark Baltimore Longitudinal Study. Following upon her naturalistic home observations in Uganda, the Baltimore project yielded a wealth of enduring benchmark results on the nature of the child's tie to its primary caregiver and the importance of early experience. It also addressed a wide range of conceptual and methodological issues common to many developmental and longitudinal projects, especially issues of age appropriate assessment, quantifying behavior, and comprehending individual differences. In addition, Ainsworth and her students broke new ground, clarifying and defining new concepts, demonstrating the value of the ethological methods and insights about behavior. Today, as we enter the fourth generation of attachment study, we have a rich and growing catalogue of behavioral and narrative approaches to measuring attachment from infancy to adulthood. Each of them has roots in the Strange Situation and the secure base concept presented in *Patterns of Attachment*. Its inclusion in the Psychology Press Classic Editions series reflects *Patterns of Attachment*'s continuing significance and insures its availability to new generations of students, researchers, and clinicians.

Adult Attachment Patterns in a Treatment Context Sarah Daniel, 2014-08-27. Attachment theory posits that the need for attachment is a life-long phenomenon that becomes especially relevant in times of crisis or trauma. When adults experience illness, accidents, assaults, psychological difficulties, or losses, their attachment behavioural systems are activated, motivating them to seek help and support from family and friends, and/or from helping professionals. However, the resulting request for help is affected and shaped by earlier experiences regarding the support and trustworthiness of attachment figures. Can others be trusted? Is it safe to show vulnerability? How should one behave to increase the likelihood of receiving the help needed? *Adult Attachment Patterns in a Treatment Context* provides an

integrated introduction to the subject of adult attachment Research into adult attachment patterns offers professional helpers a theoretically sound insight into the dynamics underlying a range of client behaviours including some of the more puzzling and frustrating behaviours such as denying obvious pain or continually pushing the professional for more personal involvement Sarah Daniel shows how applying knowledge of attachment patterns to treatment settings will improve the way in which professionals engage with clients and the organization of treatments This book will be relevant to a range of helping professionals such as psychotherapists psychologists and social workers both in practice and in training
