Researching Disability Issues:

EBOOK: Researching Disability Issues Michelle Moore, Sarah Beazley, June Maelzer, 1998-03-16 This book is designed to meet a growing need for clear illustrations of how to carry out research which seeks to explore disability issues. It aims to demonstrate the value of a critical attention to social rather than medical starting points for researching disability through reviewing a variety of studies which look at different aspects of disabled people's lives. Different methodological approaches and research techniques are considered ranging from analysis of observation data concerning disabled children in schools to rich conversation based data which focuses on family life. A central theme concerns the pivotal role of disabled people in research. The book provides substantive examples of the dilemmas which face researchers and connects these to ideas for individual personal action. Disabled and non disabled researchers, professionals and students from a wide range of disciplines will find the presentation of both research findings and debates informative and of interest. *Researching Disability Issues* Moore, Michelle, Beazley, Sarah, Maelzer, June, 1998-03-01 This book is designed to meet a growing need for clear illustrations of how to carry out research which seeks to explore disability issues. Purpose, Process and Future Direction of Disability Research

Simoni Symeonidou, Karen Beauchamp-Pryor, 2013-11-19 Purpose, Process and Future Direction of Disability Research brings together the collective experience of an international network of early career researchers who set out to discuss the complexity of researching disability. As newcomers to the research process, the researchers detail their apprehensions about embarking on doctoral research together with the struggles they experienced along the way and importantly the motivation that drove them to complete their projects. Contributors present an open and honest reflection on their research experience. Interests, motives and values which underpinned the direction of their research projects are explored, questioning whether their beliefs were subsequently challenged, changed or validated. Research decisions were driven by a range and combination of personal experience of disability and professional experience of working with disabled people. The influence of personal and professional approaches within research is addressed along with subsequent dilemmas. Ideological battles are detailed which include the place of the social model of disability in research and the oppressive nature of doing disability research. The researchers identify and examine their experience throughout the process of analysis, writing up and presenting data and question how far their data resulted in confusions or conclusions. Contributors explore their moral and political position as researchers and the potential influence on the validity of their findings. Issues about dissemination and the impact of their findings are also considered. Future research aims and challenges are identified with each contributor critically questioning the unfinished business that their research has involved. Essential reading recommended for students and supervisors engaged in disability studies and inclusive education.

Social Research and Disability Ciaran Burke, Bronagh Byrne, 2020-12-29 Social Research and Disability argues that the contemporary rules of sociological methods outlined in numerous research methods texts make a number of assumptions concerning the researcher including ambivalence sight hearing and speech In short the disabled researcher is not considered when outlining the requirements of particular methods Drawing upon these considerations the volume emphasizes how disabled researchers negotiate the empirical process in light of disability whilst retaining the scientific rigour of the method It also considers the negative consequences arising from disabled researchers' attempts at passing and the benefits that can emerge from a reflexive approach to method This innovative and original text will for the first time bring together research active academics who identify as being disabled to consider experiences of being disabled within a largely ableist academy as well as strategies employed and issues faced when conducting empirical research The driving force of this volume is to provide the blueprints for bringing how we conduct social research to the same standards and vision as how the social world is understood multi faceted and intersectional To this end this edited collection advocates for a sociological future that values the presence of disabled researchers and normalises research methods that are inclusive and accessible The interdisciplinary focus of Social Research and Disability offers a uniquely broad primary market This volume will be of interest not only to the student market but also to established academics within the social sciences *The Handbook of Social Research Ethics*
