

Nominalism and resemblance

- So, how do nominalists explain resemblance?
- Several options:
 - 1) Resemblance is just primitive: it cannot be explained.
 - 2) Two objects resemble each other if they fall under the same *predicate or concept*.
 - 3) Class nominalism: properties do exist, but they are not universals, they are sets.
 - 4) Ostrich nominalism: bit different.
- We will be looking at (3) and (4)

Resemblance Nominalism:

Resemblance Nominalism Gonzalo Rodriguez-Pereyra, 2002-07-04 Gardeners poets lovers and philosophers are all interested in the redness of roses but only philosophers wonder how it is that two different roses can share the same property Are red things red because they resemble each other Or do they resemble each other because they are red Since the 1970s philosophers have tended to favour the latter view and held that a satisfactory account of properties must involve the postulation of either universals or tropes But Gonzalo Rodriguez Pereyra revives the dormant alternative theory of resemblance nominalism showing first that it can withstand the attacks of such eminent opponents as Goodman and Armstrong and then that there are reasons to prefer it to its rival theories The clarity and rigour of his arguments will challenge metaphysicians to rethink their views on properties Resemblance Nominalism Gonzalo Rodriguez-Pereyra, 2002

The Routledge Handbook of Properties A.R.J. Fisher, Anna-Sofia Maurin, 2023-12-22 Philosophical questions regarding both the existence and nature of properties are ubiquitous in ordinary life the sciences and philosophical theorising In philosophy it is one of the oldest topics discussed in various intellectual traditions East and West reaching back to Plato and Aristotle Today in the analytic tradition properties continue to be a core area of study and research The Routledge Handbook of Properties is an outstanding reference source to this perennial topic and is the first major volume of its kind It contains forty specially commissioned chapters written by an international team of expert contributors and is divided into nine clear parts Methodology and Metaontology Distinctions Realism about Universals Nominalism Trope Theory Properties in Causation Time and Modality Properties in Science Properties in Language and Mind Properties in the Normative Realm the Social World and Aesthetics The Routledge Handbook of Properties is essential reading for anyone studying and researching metaphysics metametaphysics and ontology and will also be of interest to those in closely related areas such as philosophy of science philosophy of language philosophy of mind ethics and aesthetics **Metaphysics: The Key Concepts** Nikk Effingham, Helen Beebe, Philip Goff, 2010-11-30 Ever wondered about Gunk Brains in a Vat or Frankfurt's Nefarious Neurosurgeon With complete explanations of these terms and more Metaphysics The Key Concepts is an accessible and engaging introduction to the most widely studied and challenging concepts in metaphysics Properties Douglas Edwards, 2014-05-12 The world is populated with many different objects to which we often attribute properties we say for example that grass is green that the earth is spherical that humans are animals and that murder is wrong We also take it that these properties are things in their own right there is something in which being green or spherical or an animal or wrong consists and that certain scientific or normative projects are engaged in uncovering the essences of such properties In light of this an important question arises what kind of things should we take properties themselves to be In Properties Douglas Edwards gives an engaging accessible and up to date introduction to the many theories of properties available Edwards charts the central positions in the debate over properties including the views that properties are universals that

properties are constructed from tropes and that properties are classes of objects and assesses the benefits and disadvantages of each Attempts to deny the existence of properties are also considered along with pluralist proposals which aim to accommodate the different kinds of properties that are found in various philosophical debates Properties is the ideal introduction to this topic and will be an invaluable resource for scholars and students wishing to learn more about the important roles that properties have played and continue to play in contemporary philosophy

Concrete Particulars Daniel Giberan, 2024-06-07 This book presents a novel metaphysics of concrete entities The author uses the theory developed to address three major topics in the metaphysics of concreta fundamentality persistence over time and phenomenal consciousness The book provides a new theory of what bundles particular property instances or tropes into material property bearers The theory is based on two new ideas The first

is that the primitive nature of one sui generis monadic property called markedness bears on the bundling of other properties tropes The second idea is that the geometric and topological features of a given markedness trope help to determine which tropes it bundles The author argues that this new markedness bundle theory determines all property co instantiation at the levels of both type and token positioning markedness tropes as the fundamental concreta The theory also explains bundling across time yielding an advantageous account of material persistence Finally markedness tropes operate as de facto panprotopsychoist property instances fundamental non consciousness tropes that uniquely explain where and why consciousness properties are exemplified The book solidifies the case for markedness through sustained critical analysis of competing theories of fundamentality and persistence focusing in part on their inability to account for unending mereological and plural structures Concrete Particulars will appeal to scholars and advanced students working in metaphysics and philosophy of mind

Ontological Investigations Ingvar Johansson, 2013-05-02 This volume is devoted to problems within analytic metaphysics It defends an ontology and theory of categories inspired by Aristotle but revised in such a way as to be compatible with modern science The ontology of both natural and social reality is addressed starting out from the view that universals exist but only in the spatiotemporal world

immanent realism In attempting to bring Aristotle's ontology up to date the author relies very much on the thinking of Edmund Husserl conceiving the cement of the universe as Husserlian relations of existential dependence and regarding intentionality as a non reducible category in the ontology of mind The work is thoroughly realistic in spirit but large parts of it should nonetheless be of interest to conceptualists and nominalists too David Armstrong Stephen Mumford,2014-12-05 David D M Armstrong is one of Australia's greatest philosophers His chief philosophical achievement has been the development of a core metaphysical programme embracing the topics of universals laws modality and facts a naturalistic metaphysics consistent with a scientific view of the natural world It is primarily through his work that Australian philosophy and Australian metaphysics in particular enjoys such a high reputation in the rest of the world In this book Stephen Mumford offers an introduction to the full range of Armstrong's thought Mumford begins with a discussion of Armstrong's naturalism his most general commitment and his realism about universals He then examines his theories of laws modality and dispositions which make up the basics of Armstrong's core theory With this in place Mumford explores his ideas on perception mind and belief before returning to metaphysics in the last two chapters looking at truth and the new view of instantiation The book is a dispassionate fair and unbiased account of Armstrong's thought Although Armstrong's is a body of work that Mumford regards highly and of real significance he nevertheless highlights areas of weakness and issues about which there is room for further debate

Problems in Epistemology and Metaphysics Steven B. Cowan,2020-02-06 Problems in Epistemology and Metaphysics takes a pro and con approach to two central philosophical topics Each chapter begins with a question Can We Have Knowledge How are Beliefs Justified What is the mind Contemporary philosophers with opposing viewpoints are then paired together to argue their position and raise problems with conflicting standpoints Alongside an up to date introduction to a core philosophical stance each contributor provides a critical response to their opponent and clear explanation of their view Discussion questions are included at the end of each chapter to guide further discussion With chapters covering core questions surrounding religious beliefs scientific knowledge truth being and reality this is a comprehensive introduction to debates lying at the heart of what we know how we know it and the nature of the world we live in

A Critical Introduction to Properties Sophie Allen,2016-02-25 What do blue things have in common Or electrons Or planets Distinct things appear to share properties but what are properties and what is the best philosophical account of them A Critical Introduction to Properties introduces different ontological accounts of properties exploring how their formulation is shaped by the explanatory demands placed upon them This accessible introduction begins with a discussion of universals tropes sets and resemblance classes the major objections to them and their responses providing readers with a firm grasp on the competing ontological accounts of what if anything grounds similarity and difference It then explores issues concerning the formulation and justification of property theories such as how many properties are there Should we accept a sparse ontology of properties or an abundant one Can we make a distinction between intrinsic and

extrinsic properties Do properties have their causal roles necessarily What is the relationship between properties and other metaphysical phenomena such as causality laws and modality These questions get to the heart of why a coherent theory of properties is so important to metaphysics and to philosophy more generally By concluding with the question of the ontological status of properties the reader is introduced to some Carnapian and contemporary themes about the content and methodology of metaphysics For students looking for an accessible resource and a more comprehensive understanding of contemporary metaphysics *A Critical Introduction to Properties* is a valuable starting point

A Metaphysics of Platonic Universals and their Instantiations José Tomás Alvarado, 2020-10-27 This book offers a detailed defense of a metaphysics of Platonic universals and a conception of particular objects that is coherent with said metaphysics The work discusses all the main alternatives in metaphysics of properties and tries to show why universals are the entities that best satisfy the theoretical roles required for a property The work also explains the advantages of Platonic over Aristotelian universals in the metaphysics of modality and natural laws Moreover it is argued that only Platonic universals are coherent with the grounding profile required for universals The traditional objections against Platonism are discussed and answered The third part of the book finally offers a conception of particular objects as nuclear bundles of tropes that is coherent with the Platonic ontology of universals This book is of interest to anyone that wants to understand the current and intricate debate in metaphysics of properties and its incidence in many other areas in philosophy

Mind, Values, and Metaphysics Anne Reboul, 2014-08-13 This book addresses five main topics of metaphysics in its first section formal objects and truth makers tropes properties and predicates varieties of relations and the notion of explanation in metaphysics The second part of this volume focuses on the history of philosophy with an emphasis on Austrian philosophy the ideas of Bolzano Wittgenstein Locke and Bergson amongst others are explored in the papers presented here This is the first volume in a two volume set that originates from papers presented to Professor Kevin Mulligan covering the subjects that he contributed to during his career including ontology mind and value history and philosophy of mind and philosophy of language This volume contains thirty two chapters written by researchers from across Europe North America and North Africa These papers cover topics in metaphysics ranging from Lehrer and Tolliver s discussion of truth and tropes to Johansson s defence of the distinction between thick and thin relations and Persson and Sahlin s presentation of the difficulties inherent in applying the concept of explanation in metaphysics Papers on the history of philosophy include a look at Bolzano s formative years and his conception of mathematics De Libera examines Brentano s adverbial theory of judgment and Fisette traces the history of the Philosophical Society of the University of Vienna in the late 19th and early 20th century Marion contests the trendy pragmatist accounts that lump Wittgenstein and Heidegger together and there are analyses of Locke and Bergson s work amongst the many papers presented here This volume contains three chapters in French and one in Spanish The second volume of this set looks at ethics values and emotions epistemology perception and consciousness as well as philosophy of mind and philosophy of language

Experience and Possibility Joseph Mendola, 2021-01-11 Experience and Possibility concerns the modal ontology of experience. It investigates the detailed metaphysics of the colors, shapes, and other concrete properties present in our experience of ordinary concrete objects and also of their spatial and temporal relations. It examines their experienced particularity and the nature of their locations and material bits. This detailed concern with specific cases reveals many inadequacies of traditional ontology. But the central novelty of the book is an intense focus on the modal aspects of such experienced entities and what it reveals about modality in general. The reality of such things would involve in surprising ways not merely what would hence be actual but also what would be merely possible. This supports a general conception of modality of the possible and the necessary according to which the actual and the possible are locally entwined and involve different types of being. The particulars, properties, and relations we experience involve distinctive forms of modal structure characteristic of specific sorts of universals and irreducible particularities. When this experience is not veridical, when for instance the color we experience is somewhat misleading about reality, it is a puzzle how we have such experience nonetheless. Exploration of these forms of modal structure is groundwork for a new account of how our neurophysiology explains such misleading experience, how our physical structure delivers such qualia. This is sketched for the case of experienced color. Its core idea is that the apparent modal structure of things we experience is sometimes due to the actual modal structure of the neurophysiology that constitutes that experience.

Property Possession as Identity Patrick X. Monaghan, 2013-05-02 In this essay Monaghan argues for an account of property possession as strict numerical identity. According to this account, for an entity to possess a property is for that entity and that property to be numerically identical to each other. To defend this view, he argues against two views he calls Externalism and Internalism about property possession. Monaghan argues that it is impossible for one entity to possess a second entity as a property. He provides replies to a variety of objections one might raise against his account.

Moderate Realism and Its Logic Donald W. Mertz, 1996-01-01 Applying the rules and systems of mathematics and logic to instance ontology, this work argues for the validity and problem-solving capacities of instance ontology and associates it with a version of the realist position which is named by the author as moderate realism.

Bertrand Russell's Bundle Theory of Particulars Gülerberk Koç Maclean, 2014-03-13 Winner of the 2015 Bertrand Russell Society Book Award, Bertrand Russell's Bundle Theory of Particulars presents and evaluates Russell's arguments for two competing theories on the nature of particulars at different stages in his career: the substratum theory of particulars (1903-1913) and the bundle theory of particulars (1940-1948). Through its original focus on Russell's little-known metaphysics in the later part of his career, this study explains why Russell's theory of particulars is relevant today. It argues that a Russellian realist bundle theory is indeed the best explanation of similarities and differences that we observe around us, thanks to the ontological economy such a theory provides and its strength and completeness as a theory of the nature of reality. Tackling the major criticisms levelled against the realist bundle theory, the problem of individuation, the problem of

necessity and the problem of analyticity this study presents and defends a tenable Russellian bundle theory which can answer the objections Bertrand Russell's Bundle Theory of Particulars is a novel and significant contribution to Russell scholarship *Varieties of Things* Cynthia MacDonald, 2008-04-15 *Varieties of Things* Foundations of Contemporary Metaphysics is about some of the most fundamental kinds of things that there are the things that we encounter in everyday experience A book about the things that we encounter in everyday experience Contains a thorough and accessible discussion of the nature and aims of metaphysics Examines a wide range of ontological categories including both particulars and universals Mounts a forceful and persuasive case for anti reductionism
