Technologies for Food and Environmental Security Sunil Kumar, D.R. Singh, Anil Kumar Singh, Sushanta Sarkar, 2024-03-27 Natural resources are vital for meeting the food livelihood and environmental security. It is now widely accepted that future of food livelihood and environmental security depends upon the attention paid to conservation, sustainable development and management of natural resources. Natural resource management ties in with applied concepts such as maximum sustainable yield (MSY) and optimum utilization. Every natural resource has its optimum utilization or acceptable levels of use which are established scientifically and according to which management authorities regulate its exploitation. Degradation of natural resources has been caused by a variety of social, economic, institutional and technological factors. Rapidly growing population, urbanisation and industrial activities have all resulted in considerable deterioration in the quality and quantity of natural resources. This book discusses both the principles and applications of an integrated approach to natural resources management. This book is a compilation of various topical issues on the prime concerns of natural resource conservation in arable and non-arable lands, suitable land utilization, planning, soil, water resource conservation, diversification of crops and farming systems to ensure sustainable management. **Implementation of the Resource Conservation Provisions of**

Subcommittee on Conservation, Credit, and Rural Development, 1987 Input Use Efficiency for Food and Environmental Security Rajan Bhatt, Ram Swaroop Meena, Akbar Hossain, 2022-01-11 Ending hunger, achieving food security and promoting sustainable development are at the top of the list of United Nations UN sustainable global development priorities. In the times of high population growth and increasing pressure of agricultural systems, efficiency in use of natural resources has been at the epicenter of sustainable agriculture. The concept of input efficiency implies production of high quantity and quality of food from using only finite natural resources as inputs in the form of mainly land, water, nutrients, energy or biological diversity. In this book, editors provide a roadmap to the food, nutritional and environmental security in the agricultural systems. They share insight into the approaches that can be put in practice for increasing the input use efficiency in the cropping systems and achieve stability and sustainability of agricultural production systems. This book is of interest to teachers, researchers, climate change scientists, capacity builders and policymakers. Also, the book serves as additional reading material.
