Trapping Safety into Rules Mathilde Bourrier, 2017-05-15 Rules and procedures are key features for a modern organization to function It is no surprise to see them to be paramount in safety management As some sociologists argue routine and rule following is not always socially resented It can bring people comfort and reduce anxieties of newness and uncertainty Facing constant unexpected events entails fatigue and exhaustion There is also no doubt that proceduralization and documented activities have brought progress avoided recurrent mistakes and allowed for best practices to be adopted However it seems that the exclusive and intensive use of procedures today is in fact a threat to new progress in safety There is an urgent need to consider this issue because there is doubt that the path chosen by many hazardous industries and activities is the most effective safety wise considering the safety level achieved today As soon as safety is involved there seems to be an irresistible push towards a wider scope of norms procedures and processes whatever the context implied This book is not a plea against proceduralization but it does take the view that it is time to reassess how far it can still go and to what benefit Underlying these questions there is a growing suspicion that the path taken might in fact lead to a dead end unless the concept of procedure and the conditions under which these procedures are developed are revisited

Green Products by Design Gregory Eyring, 1998-04 Product design is an important environmental focal point with design decisions directly and indirectly determining levels of resource use and the composition of waste streams This report addresses the importance of product design as a tool for reducing wastes and managing materials It provides a conceptual overview of how designers might integrate environmental concerns with traditional design objectives and how policymakers can best take advantage of such opportunities Although the concept of green design is gathering momentum technical behavioral and economic barriers need to be addressed Illustrated

Green Products by Design United States. Congress. Office of Technology Assessment,1992 *Irrigation and River Basin Management* Mark Svendsen,2005 With increasing water scarcity pressure to re allocate water from agriculture to other uses mounts along with a need to put in place institutional arrangements to promote higher value uses of water Many developing countries are now experimenting with establishing new institutional arrangements for managing water at the river basin level This book based on research by IWMI and others reviews basin management in six developed and developing countries It describes and applies a functional theory of river basin management based on the idea that there is a minimum set of functions required to manage basins effectively and a set of basic conditions that enable effective management institutions to emerge The book examines the experiences of both developed and developing countries in order to see what lessons can be learned and to identify what constitutes the core of a theory of river basin management It concludes that although it is difficult for developing countries to adopt approaches and institutional designs directly from developed countries basic principles and lessons are transferable
