## **Restoration Of Puget Sound Rivers:**

**Restoration of Puget Sound Rivers** David R. Montgomery, Susan Bolton, Derek B. Booth, Leslie Wall, 2015-12-31 The recent listing of Pacific salmon under the Endangered Species Act has led to substantial interest in the scientific basis for river restoration in the Pacific Northwest Millions of dollars in state and federal funding have been programmed for habitat restoration efforts to stem the decline of salmon populations in the region This volume addresses the need for a solid understanding of fluvial processes and aquatic ecology in order to predict both river and salmonid response to restoration projects In the Pacific Northwest as in most regions of the United States we are still learning about the processes that create habitat and river structure how those processes influence aquatic ecosystems and how to gauge the response of river systems to both land use changes and restoration efforts River systems are still responding to historic changes and degraded habitat may not be restored successfully if natural conditions are not well understood particularly if massive changes in watershed hydrology or other processes are the root cause These issues faced in the development of regional river restoration programs are by no means unique to the Northwest and so the initiation of a regional program of river restoration provides an opportunity to evaluate the state of river restoration in general The eighteen chapters of Restoration of Puget Sound Rivers presented by the region s experts at a symposium of the Society for Ecological Restoration examine geological and geomorphological controls on river and stream characteristics and dynamics biological aspects of river systems in the region and the application of fluvial geomorphology civil engineering riparian ecology and aquatic ecology in efforts to restore Puget Sound Rivers This volume will be of interest to geomorphologists aquatic biologists civil engineers planners and all those interested in the interface of science and policy in addressing one of the fundamental environmental challenges of the twenty first century     *Habitat Rehabilitation for Inland Fisheries* Philip Roni, Food and Agriculture Organization of the United Nations, 2005-01-01 This technical paper reviews current information on the effectiveness of habitat rehabilitation techniques for inland fisheries based on published evaluations of projects including studies on roads improvements and sediment reduction riparian and floodplain rehabilitation placement of habitat structures in lakes and streams and the addition of nutrients to increase aquatic production It also sets out information on planning prioritising and monitoring rehabilitation projects     **Restoring the Pacific Northwest** Dean Apostol, Marcia Sinclair, 2012-09-26 The Pacific Northwest is a global ecological hotspot because of its relatively healthy native ecosystems a high degree of biodiversity and the number and scope of restoration initiatives that have been undertaken there Restoring the Pacific Northwest gathers and presents the best examples of state of the art restoration techniques and projects It is an encyclopedic overview that will be an invaluable reference not just for restorationists and students working in the Pacific Northwest but for practitioners across North America and around the world     **Energy and Water Development Appropriations for 2000** United States. Vegetation of Australian Riverine Landscapes Samantha Capon, Cassandra James, Michael Reid, 2016-04 Vegetation communities in Australia's riverine landscapes are ecologically, economically and culturally significant. They are also among the most threatened ecosystems on the continent and have been dramatically altered as a result of human activities and climate change. Vegetation of Australian Riverine Landscapes brings together for the first time the results of the substantial amount of research that has been conducted over the last few decades into the biology, ecology and management of these important plant communities in Australia. The book is divided into four sections. The first section provides context with respect to the spatial and temporal dimensions of riverine landscapes in Australia. The second section examines key groups of riverine plants while the third section provides an overview of riverine vegetation in five major regions of Australia including patterns, significant threats and management. The final section explores critical issues associated with the conservation and management of riverine plants and vegetation including water management, salinity, fire and restoration. Vegetation of Australian Riverine Landscapes highlights the incredible diversity and dynamic nature of riverine vegetation across Australia and will be an excellent reference for researchers, academics and environmental consultants.

**River Futures** Gary J. Brierley, Kirstie A. Fryirs, 2012-09-26 Across much of the industrialized world, rivers that were physically transformed and ecologically ruined to facilitate industrial and agricultural development are now the focus of restoration and rehabilitation efforts. River Futures discusses the emergence of this new era of river repair and documents a comprehensive biophysical framework for river science and management. The book considers what can be done to maximize prospects for improving river health while maintaining or enhancing the provision of ecosystem services over the next fifty to one hundred years. It provides a holistic overview of considerations that underpin the use of science in river management, emphasizing cross-disciplinary understanding that builds on a landscape template. The book frames the development of integrative river science and its application to river rehabilitation programs, develops a coherent set of guiding principles with which to approach integrative river science, considers the application of cross-disciplinary thinking in river rehabilitation, experiences from around the world, examines the crossover between science and management, outlining issues that must be addressed to promote healthier river futures. Case studies explore practical applications in different parts of the world, highlighting approaches to the use of integrative river science, measures of success and steps that could be taken to improve performance in future efforts. River Futures offers a positive, practical and constructive focus that directly addresses the major challenge of a new era of river conservation and rehabilitation: that of bringing together the diverse and typically discipline-bound sets of knowledge and practices that are involved in repairing rivers. It is a valuable resource for anyone involved in river restoration and management, including restorationists, scientists, managers and policymakers, as well as undergraduate and graduate students.

**Salmonid Fisheries** Paul Kemp, 2011-06-13 Salmonid Fisheries is a landmark publication concentrating on river management, habitat restoration and rehabilitation, disseminating lessons learnt in relation to the intensively studied

salmonids that are applicable to future interventions not just for salmonid species but for other non salmonid species biota and ecosystems The contents of this book are the product of the Atlantic Salmon Trust s 40th Anniversary Conference held in association with the Game and Wildlife Conservation Trust Drawing together carefully edited contributions from many of the world leaders in river restoration from academia commercial management and government agencies this important book highlights the need to view river management from the context of the catchment and to adopt an ecosystem based approach to restoration The book is broadly divided into two sections which discuss first the status of current understanding concerning the relationship between lotic habitat management the response of salmonid fisheries and the theory of river restoration and secondly the application of this to habitat management and river restoration Salmonid Fisheries is an extremely valuable work of reference for fisheries managers ecologists environmental scientists fish biologists conservation biologists and geomorphologists Libraries in all universities and research establishments where biological and earth sciences and fisheries management are studied or taught should have copies of this book on their shelves Contributions from a wide range of well known experts Published in association with the Atlantic Salmon Trust Habitat management is crucial for dwindling wild salmon populations Of great importance to aquatic ecologists and fisheries managers

**The Future of Fisheries Science in North America** Richard J. Beamish, Brian J. Rothschild, 2009-02-07 Fisheries science in North America is changing in response to a changing climate new technologies an ecosystem approach to management and new thinking about the processes affecting stock and recruitment Authors of the 34 chapters review the science in their particular fields and use their experience to develop informed opinions about the future Everyone associated with fish fisheries and fisheries management will find material that will stimulate their thinking about the future Readers will be impressed with the potential for new discoveries but disturbed by how much needs to be done in fisheries science if we are to sustain North American fisheries in our changing climate Officials that manage or fund fisheries science will appreciate the urgency for the new information needed for the stewardship of fish populations and their ecosystems Research organizations may want to keep some extra copies for a future look back into the thoughts of a wide range of fisheries professionals Fisheries science has been full of surprises with some of the surprises having major economic impacts It is important to minimize these impacts as the demand for seafood increases and the complexities of fisheries management increase
