Restoring Kapiti Natures Second Chance:

Restoring Kapiti Kerry Brown, 2004 Established as a nature reserve in 1897 Kapiti Island is one of New Zealand's longest and most exciting restoration stories In this text 19 specialists who have worked on the project relay the inspiring tale of its rehabilitation the restoration of the land sea and birds the Island's past and its future Illustrated throughout with colour photographs charts and maps the text is academic but accessible to the general reader *Our Once and Future Planet* Paddy Woodworth, 2013-10-15 The environmental movement is plagued by pessimism And that's not unreasonable with so many complicated seemingly intractable problems facing the planet coupled with a need to convince people of the dangers we face it's hard not to focus on the negative But that paints an unbalanced and overly disheartening picture of what's going on with environmental stewardship today There are success stories and *Our Once and Future Planet* delivers a fascinating account of one of the most impressive areas of current environmental experimentation and innovation ecological restoration Veteran investigative reporter Paddy Woodworth has spent years traveling the globe and talking with people scientists politicians and ordinary citizens who are working on the front lines of the battle against environmental degradation At sites ranging from Mexico to New Zealand and Chicago to Cape Town Woodworth shows us the striking successes and a few humbling failures of groups that are attempting to use cutting edge science to restore blighted polluted and otherwise troubled landscapes to states of ecological health and in some of the most controversial cases to particular moments in historical time before widespread human intervention His firsthand field reports and interviews with participants reveal the promise power and limitations of restoration Ecological restoration alone won't solve the myriad problems facing our environment But *Our Once and Future Planet* demonstrates the role it can play and the hope inspiration and new knowledge that can come from saving even one small patch of earth **A Land Before Humans, a Land After Humans** Mark Fisher, 2025-02-28 Some species survive reliant on conservation some may survive eluding our knowing some may not survive despite our efforts and some may survive by adapting to and integrating with human worlds New Zealand is a unique and fascinating country as a case study for managing invasive species Because of its history we know a lot about species introductions and because of its geographical position as a relatively small remote island the potential for dealing with invasive species may be more effective than elsewhere Moreover the fragility of its ecosystems makes it relatively easy to see the impact of one species upon another Nature and people shape the country's ecology from its geological and biological beginnings to the relatively recent arrival of people and the changes wrought to the wide ranging efforts of individuals and communities to protect and enhance treasured species and environments Among them an ambitious Predator Free 2050 initiative to rid the country of some of its unwanted species The issue is a complex and interesting one There are ethical considerations which species are protected and which destroyed How are they destroyed What are the unforeseen consequences There are also tensions between preservation and the use of natural resources and ultimately our relationship

to the environment how we live A Land Before Humans a Land After Humans explores these issues An invaluable resource for environment ecology animal welfare and ethics students researchers and policy makers the book takes New Zealand as a case study and looks at the practical and ethical considerations of dealing with invasive species 5m Books Unbreaking

Advances in Reintroduction Biology of Australian and New Zealand Fauna Doug Armstrong, Matthew Hayward, Dorian Moro, Philip Seddon, 2015-05-15 The publication of Reintroduction Biology of Australian and New Zealand Fauna nearly 20 years ago introduced the new science of reintroduction biology Since then there have been vast changes in our understanding of the process of reintroductions and other conservation driven translocations and corresponding changes in regulatory frameworks governing translocations Advances in Reintroduction Biology of Australian and New Zealand Fauna is a timely review of our understanding of translocation from an Australasian perspective ensuring translocation becomes an increasingly effective conservation management strategy in the future Written by experts including reintroduction practitioners researchers and policy makers the book includes extensive practical advice and example case studies identifies emerging themes and suggests future directions Topics include key questions in reintroduction biology population establishment prey naivety disease management dispersal the roles of trials and experiments modelling projections assisted colonisation population interchange genetic diversity disease management metapopulation dynamics reintroduced species as ecological engineers the contributions of sanctuary networks and zoos and extensive insights from reintroduction programs This book is aimed at conservation practitioners and researchers as well as conservation management agencies and NGOs Although it is based on Australasian examples it will be of interest globally due to synergies with reintroduction programs throughout the world
