New Polymers for Encapsulation of Nutraceutical Compounds Jorge Carlos Ruiz Ruiz, Maira Rubi Segura Campos, 2016-12-27 The incorporation of functional ingredients in a given food system and the processing and handling of such foods are associated with nutritional challenges for their healthy delivery The extreme sensitivity of some components cause significant loss of product quality stability nutritional value and bioavailability and the overall acceptability of the food product Consequently encapsulation has been successfully used to improve stability and bioavailability of functional ingredients Encapsulation is one example of technology that has the potential to meet the challenge of successfully incorporating and delivering functional ingredients into a range of food types The book will cover topics about 1 Characterization of novel polymers and their use in encapsulation processes 2 Stability of nutraceutical

compounds encapsulated with novel polymers 3 Application of encapsulated compounds with novel polymers in functional food systems This book provides a detailed overview of technologies for preparing and characterisation of encapsulates for food active ingredients using modified polymers The use of modified polymers as coating materials it is a field that still needs study The book is aimed to inform students and researchers in the areas of food science and food technology and professionals in the food industry

information about the bioactive molecules presented in our daily food and their effect on the physical and mental state of our body. Although the concept of functional food is new, the consumption of selected food to attain a specific effect existed already in ancient civilizations, namely of China and India. Consumers are now more attentive to food quality, safety, and health benefits, and the food industry is led to develop processed and packaged food, particularly in terms of calories, quality, nutritional value, and bioactive molecules. This book covers the entire range of bioactive molecules presented in daily food, such as carbohydrates, proteins, lipids, isoflavonoids, carotenoids, vitamin C, polyphenols, bioactive molecules presented in wine, beer, and cider. Concepts like French paradox, Mediterranean diet, healthy diet of eating fruits and vegetables, vegan, and vegetarian diet, functional foods are described with suitable case studies. Readers will also discover a very timely compilation of methods for bioactive molecules analysis. Written by highly renowned scientists of the field, this reference work appeals to a wide readership from graduate students, scholars, researchers in the field of botany, agriculture, pharmacy, biotechnology, and food industry to those involved in manufacturing, processing, and marketing of value-added food products.

Plant-derived Natural Products Anne E. Osbourn, Virginia Lanzotti, 2009-07-07. Plants produce a huge array of natural products, secondary metabolites. These compounds have important ecological functions, providing protection against attack by herbivores and microbes, and serving as attractants for pollinators and seed dispersing agents. They may also contribute to competition and invasiveness by suppressing the growth of neighboring plant species, a phenomenon known as allelopathy. Humans exploit natural products as sources of drugs, flavoring agents, fragrances, and for a wide range of other applications. Rapid progress has been made in recent years in understanding natural product synthesis, regulation, and function, and the evolution of metabolic diversity. It is timely to bring this information together with contemporary advances in chemistry, plant biology, ecology, agronomy, and human health to provide a comprehensive guide to plant-derived natural products. Plant-derived natural products: synthesis, function, and application provides an informative and accessible overview of the different facets of the field, ranging from an introduction to the different classes of natural products through developments in natural product chemistry and biology to ecological interactions and the significance of plant-derived natural products for humans. In the final section of the book, a series of chapters on new trends covers metabolic engineering, genome-wide approaches, the metabolic consequences of genetic modification, developments in traditional medicines and nutraceuticals, natural products as leads for drug discovery, and novel non-food crops.
