Describes how retailers can plan their cross channel network strategy for the future. **Retail Geography** Shuguang Wang, Paul Du, 2020-05-26 The retail

sector is an integral part of a national economy. From the political economy perspective all consumer goods have surplus values locked up in them; the surplus values are not realized until the consumer goods are purchased by consumers through various distribution channels. As such retailing is the essential link between production and consumption. The success of a retail business depends on two general factors: the location of the retail outlet and management of the business. Both factors are equally important. If the business is located in the wrong place with the wrong customer base it will not generate expected sales. Similarly if the business is poorly managed and operated it will not perform well even if the location is right. Influenced by both traditional and new location theories, Retail Geography is conceptualized and organized using the retail planning process as the framework. The technical and methodological chapters help guide the reader with detailed descriptions of the techniques and are supported with practical examples to reflect the latest software development. Retail Geography provides a state of the art summary and will act as a core textbook for undergraduate and graduate students of economic geography interested in specializing in retail and business geography. The practical examples also make it a valuable handbook for practitioners in the field as well as students of retail management and commercial real estate management. *Retail Location Planning in an Era of Multi-Channel Growth* Mark Birkin, Graham Clarke, Martin

Clarke, 2017-03-27 The way in which products and services are delivered to consumers through branches and retail outlets or

more generally through a network of distribution channels remains fundamentally important for maintaining a competitive advantage for a very wide range of businesses This is true within domestic markets but especially so for increasingly global corporations as shareholder pressure for continued growth drives businesses into ever more widespread geographical markets Arguing that more complex markets demand more sophisticated spatial analysis this book discusses the application of location planning techniques to generate competitive advantage in a variety of business sectors in a changing retail environment The series of techniques are analysed from relatively straightforward branch scorecards to sophisticated applications of geographical information systems GIS spatial modelling and mathematical optimisation Also explored are the changing dynamics of the impact of more restrictive planning environments in many countries on how retailers find new locations for growth and respond to changing consumer needs and wants The book is essential reading for students and scholars alike working in geography economics business management planning finance and industry studies
