Rethinking Archaeology:

Rethinking Archaeology Kwang-chih Chang, 1967 *Re-thinking Archaeology* Håkan Karlsson, 1998 *Rethinking Archaeology* Kwang-chih Chang, 1967 **Digital Innovations in European Archaeology** Kevin Garstki, 2020-12-10

European archaeologists in the last two decades have worked to integrate a wide range of emerging digital tools to enhance the recording analysis and dissemination of archaeological data. These techniques have expanded and altered the data collected by archaeologists as well as their interpretations. At the same time, archaeologists have expanded the capabilities of using these data on a large scale across platforms, regions, and time periods, utilising new and existing digital research infrastructures to enhance the scale of data used for archaeological interpretations. This Element discusses some of the most recent innovative uses of these techniques in European archaeology at different stages of archaeological work. In addition to providing an overview of some of these techniques, it critically assesses these approaches and outlines the recent challenges to the discipline posed by self-reflexive use of these tools and advocacy for their open use in cultural heritage preservation and public engagement.

The Complete Archaeology of Greece John Bintliff, 2012-05-21

The Complete Archaeology of Greece covers the incredible richness and variety of Greek culture and its central role in our understanding of European civilization from the Palaeolithic era of 400 000 years ago to the early modern period. In a single volume, the field's traditional focus on art and architecture has been combined with a rigorous overview of the latest archaeological evidence, forming a truly comprehensive work on Greek civilization. Extensive notes on the text are freely available online at Wiley Online Library and include additional details and references for both the serious researcher and amateur. A unique single volume exploration of the extraordinary development of human society in Greece from the earliest human traces up till the early 20th century AD. Provides 22 chapters and an introduction, chronologically surveying the phases of Greek culture with over 200 illustrations. Features over 200 images of art, architecture, and ancient texts, and integrates new archaeological discoveries for a more detailed picture of the Greece past, its landscape, and its people. Explains how scientific advances in archaeology have provided a broader perspective on Greek prehistory and history. Selected by Choice as a 2013 Outstanding Academic Title.

Reconsidering Archaeological Fieldwork Hannah Cobb, Oliver J. T. Harris, Cara Jones, Philip Richardson, 2012-03-07

Digging, recording, and writing are the three main processes that archaeologists undertake to analyze a site, yet the relationships between these processes is rarely considered critically. *Reconsidering Archaeological Fieldwork* asserts that each of these processes involves at least a bit of subjective interpretation. As a group of archaeologists work together to reconstruct an objective view of the past at a particular time at a particular site, their field methods and subjective interpretations affect the final analysis. This volume explores the important nature of the relationship between fieldwork, analysis, and interpretation. Containing contributions from a diverse group of archaeologists, both academic and professional, from Europe and the Americas, it critically analyzes accepted practices in field archaeology and provides thoughtful and

innovative analysis of these procedures By combining the experiences of both academic and professional archaeologists *Reconsidering Archaeological Fieldwork* highlights key differences and key similarities in their concerns theories and techniques This volume will incite discussion on fundamental questions for all archaeologists both old and new to the field

Space, Time, and Archaeological Landscapes Jaqueline Rossignol, LuAnn Wandsnider, 2013-11-11 The last 20 years have witnessed a proliferation of new approaches in archaeological data recovery analysis and theory building that incorporate both new forms of information and new methods for investigating them The growing importance of survey has meant an expansion of the spatial realm of traditional archaeological data recovery and analysis from its traditional focus on specific locations on the landscape archaeological sites to the incorporation of data both on site and off site from across extensive regions Evolving survey methods have led to experiments with nonsite and distributional data recovery as well as the critical evaluation of the definition and role of archaeological sites in data recovery and analysis In both survey and excavation the geomorphological analysis of landscapes has become increasingly important in the analysis of archaeological materials Ethnoarchaeology the use of ethnography to sharpen archaeological understanding of cultural and natural formation processes has concentrated study on the formation processes underlying the content and structure of archaeological deposits These actualistic studies consider patterns of deposition at the site level and the material results of human organization at the regional scale Ethnoarchaeological approaches have also affected research in theoretical ways by expanding investigation into the nature and organization of systems of land use per se thus providing direction for further study of the material results of those systems

Global Archaeological Theory Pedro Paulo Funari, Andrés Zarankin, Emily Stovel, 2006-04-07 Archaeological theory has gone through a great upheaval in the last 50 years from the processual theory which wanted to make archaeology more scientific to post processual theory which understands that interpreting human behavior even of past cultures is a subjective study This subjective approach incorporates a plurality of readings thereby implying that different interpretations are always possible allowing us to modify and change our ideas under the light of new information and or interpretive frameworks In this way interpretations form a continuous flow of transformation and change and thus archaeologists do not uncover a real past but rather construct a historical past or a narrative of the past Post processual theory also incorporates a conscious and explicit political interest on the past of the scholar and the subject This includes fields and topics such as gender issues ethnicity class landscapes and consumption This reflects a conscious attempt to also decentralize the discipline from an imperialist point of view to an empowering one Method and theory also means being politically aware and engaged to incorporate diverse critical approaches to improve understanding of the past and the present This book focuses on the fundamental theoretical issues found in the discipline and thus both engages and represents the very rich plurality of the post processual approach to archaeology The book is divided into four sections Issues in Archaeological Theory Archaeological Theory and Method in Action Space and Power in Material Culture and Images as

Material Discourse Archaeological Theory in Europe Ian Hodder, 2014-10-30 The 1980s witnessed exciting developments in theoretical writing in Western archaeology Where previous decades were dominated by the Anglo American perspective or New Archaeology the recent years showed the European debate grow in confidence and vitality This book published in 1991 captures this spirit of debate as contributors from a wide cross section of countries evaluate the development of the distinctly national and European characteristics of archaeology and assess future directions Contributors consider an extensive range of ideologies and viewpoints stressing the fundamentally historical emphasis and social construction of European archaeology The development of archaeological theory is traced with specific emphasis on factors which differ from country to country Ultimately it argues that the most active response to archaeology is to celebrate theory within a constantly critical mode A great insight into the development of theory Understanding the Archaeological Record Gavin Lucas, 2012-02-06 This book explores the diverse understandings of the archaeological record in both historical and contemporary perspective while also serving as a guide to reassessing current views Gavin Lucas argues that archaeological theory has become both too fragmented and disconnected from the particular nature of archaeological evidence The book examines three ways of understanding the archaeological record as historical sources through formation theory and as material culture then reveals ways to connect these three domains through a reconsideration of archaeological entities and archaeological practice Ultimately Lucas calls for a rethinking of the nature of the archaeological record and the kind of history and narratives written from it *Advances in Archaeological Method and Theory* Michael B Schiffer, 2014-06-30 *Advances in Archaeological Method and Theory* Volume 4 presents the progressive explorations in methods and theory in archaeology This book discusses the increasing application of surface collection in cultural resource management Organized into eight chapters this volume begins with an overview of the fundamental aspects of archaeoastronomy and explains what kinds of testable hypotheses that archaeoastronomy generates This text then examines the general implications for the study of cultural complexity Other chapters consider the use of surface artifacts by archaeologists to locate sites establish regional culture histories and to know where to excavate within sites This book discusses as well the interpretative interfaces between archaeology on the one hand and ethnohistory and ethnology on the other that is based on a theoretical stance advocating a fundamental holistic approach to anthropology The final chapter deals with understanding the ecology of ancient organisms This book is a valuable resource for archaeologists and anthropologists Continuity and Change in the Native American Village Robert A. Cook, 2017-11-02 Cook demonstrates that we can better allow for affiliation of archaeological sites with living descendants by more fully examining the complexity of the past *Archaeological essays in honor of Irving B. Rouse* Robert C. Dunell, Edwin S. Hall, 2011-07-22 No detailed description available for *Archaeological essays in honor of Irving B Rouse* **Advances in Archaeological Method and Theory** , 2014-06-28 *Advances in Archaeological Method and Theory* Archaeological Theory in Dialogue Rachel J. Crellin, Craig N. Cipolla, Lindsay M. Montgomery, Oliver J.T. Harris, Sophie V.

Moore,2020-11-09 *Archaeological Theory in Dialogue* presents an innovative conversation between five scholars from different backgrounds on a range of central issues facing archaeology today Interspersing detailed investigations of critical theoretical issues with dialogues between the authors the book interrogates the importance of four themes at the heart of much contemporary theoretical debate relations ontology posthumanism and Indigenous paradigms The authors who work in Europe and North America explore how these themes are shaping the ways that archaeologists conduct fieldwork conceptualize the past and engage with the political and ethical challenges that our discipline faces in the twenty first century The unique style of *Archaeological Theory in Dialogue* switching between detailed arguments and dialogical exchange makes it essential reading for both scholars and students of archaeological theory and those with an interest in the politics and ethics of the past

Archeology in Cultural Systems Lewis R. Binford,2017-07-05 *Archeology* shares with other anthropological sciences the goal of explaining differences and similarities among cultural systems Sally R Binford and Lewis R Binford therefore are concerned with theory and arguments which treat problems of the interrelationship of cultural variables with explanatory value *Archeology in Cultural Systems* is devoted to four different aspects of archeology This book progresses from theoretical methodological discussions to specific consideration of archeological materials It focuses on the analysis of archeological remains from a single site Its concern is primarily with recognizing measuring and explaining variability in the form and distribution of a site s cultural remains The authors argue that internal variability derives from the composition and distribution of societal segments represented at the site The work then shifts to study of archeological components or their attributes and seeks explanations for observed differences and similarities A final section of the volume comments and discusses materials in the volume *Archeology in Cultural Systems* is not a monolithic presentation of any particular school of archeological thought There are common interests and many points of agreement among the authors but there is also diversity of opinion on several points These points are the focus of research here

Debating Archaeology

Lewis R Binford,2016-09-16 In this volume the founder of processual archaeology Lewis R Binford collects and comments on the twenty eight substantive papers published in the 1980 s the third in his set of collected papers also Working at Archaeology and An Archaeological Perspective This ongoing collection of self edited papers together with the extensive and very candid interstitial commentaries provides an invaluable record of the development of The New Archaeology and a challenging view into the mind of the man who is certainly the most creative archaeological theorist of our time A new 2009 foreword allows further reflections on his work

Archaeological Method and Theory Linda Ellis,2003-12-16 This Encyclopedia brings together the most recent scientific information on a collection of subjects that are too often and inconveniently treated in separate publications It provides a survey of archaeological method and theory as well as the application of physical and biological sciences in archaeological research Every aspect of archaeological work is represented from the discovery process to the ultimate disposition of materials Thus the reader will find entries on subject matter

covering disciplinary theory legislation affecting the work of archaeologists pre excavation surveying excavation methodology on site conservation techniques post excavation analysis The rapid evolution of analytical technology is often superficially treated or not covered at all in textbooks or other commonly available sources Here the latest refinements in techniques such as radiometric dating stable isotopic analysis and the PCR technique of DNA analysis are presented clearly and authoritatively The discussion of these techniques is amplified by including results of the work of professionals conducting interdisciplinary research and by covering the methodological enhancements provided by the physical and natural sciences Cultural property legislation regardless of its country of origin has affected how archaeologists conduct their work This encyclopedia covers all major U S legislation developed for the protection of cultural property including the recent Native American Graves Protection and Repatriation Act and offers a substantial article on worldwide legislation concerning the reburial of human remains and its effects on the present and future practice of archaeology Without some sort of conservation program at the point of excavation valuable materials may be inadvertently contaminated or destroyed Many simple and low cost techniques to promote both sample integrity and long term preservation for major classes of materials are described in this volume Traditional treatments of method and theory usually focus on prehistoric periods and are limited in their geographic range This volume includes discussions based on various historical periods on different continents as reflected in entries such as Historical Archaeology Industrial Archaeology Medieval Archaeology and Classical Archaeology

Reclaiming Archaeology Alfredo González-Ruibal, 2013-08-21 Archaeology has been an important source of metaphors for some of the key intellectuals of the 20th century Sigmund Freud Walter Benjamin Alois Riegl and Michel Foucault amongst many others However this power has also turned against archaeology because the discipline has been dealt with perfunctorily as a mere provider of metaphors that other intellectuals have exploited Scholars from different fields continue to explore areas in which archaeologists have been working for over two centuries with little or no reference to the discipline It seems that excavation stratigraphy or ruins only become important at a trans disciplinary level when people from outside archaeology pay attention to them and somehow dematerialize them Meanwhile archaeologists have been usually more interested in borrowing theories from other fields rather than in developing the theoretical potential of the same concepts that other thinkers find so useful The time is ripe for archaeologists to address a wider audience and engage in theoretical debates from a position of equality not of subalternity Reclaiming Archaeology explores how archaeology can be useful to rethink modernity's big issues and more specifically late modernity broadly understood as the 20th and 21st centuries The book contains a series of original essays not necessarily following the conventional academic rules of archaeological writing or thinking allowing rhetoric to have its place in disclosing the archaeological In each of the four sections that constitute this book method time heritage and materiality the contributors deal with different archaeological tropes such as excavation surface depth genealogy ruins fragments repressed memories and traces They criticize their modernist implications and

rework them in creative ways in order to show the power of archaeology not just to understand the past but also the present. Reclaiming Archaeology includes essays from a diverse array of archaeologists who have dealt in one way or another with modernity including scholars from non Anglophone countries who have approached the issue in original ways during recent years as well as contributors from other fields who engage in a creative dialogue with archaeology and the work of archaeologists. *Archäologien Europas / Archaeologies of Europe* Alexander Gramsch, Arkadiusz Marciniak, Peter F. Biehl, Peter F. Biehl, Alexander Gramsch, Arkadiusz Marciniak, 2002
