*Transport Processes in Nature PB with CD-ROM* William A. Reiners, Kenneth L. Driese, 2004-07-08 William Reiners and Kenneth Driese introduce a conceptual framework for studying the propagation of ecological influences across landscapes. They also provide examples of models that describe and predict propagation. Their volume is an excellent graduate level introduction to the field of landscape ecology which is concerned with the effects of spatial patterns on ecological processes especially the movement of organisms, abiotic materials and energy across landscapes. **Transport Processes in Nature**

**Hardback with CD-ROM** William A. Reiners, Kenneth L. Driese, 2004-07-08 A conceptual framework for the study and understanding of the propagation of ecological influences in nature. Sediment Transport Faruk Bhuiyan, 2011-10-26 The purpose of this book is to put together recent developments on sediment transport and morphological processes. There are twelve chapters in this book contributed by different authors who are currently involved in relevant research. First three chapters provide information on basic and advanced flow mechanisms including turbulence and movement of particles in water. Examples of computational procedures for sediment transport and morphological changes are given in the next five chapters. These include empirical predictions and numerical computations. Chapters nine and ten present some insights on environmental concerns with sediment transport. Last two contributions deal with two large scale case studies related to changes in the transport and provenance of glacial marine sediments and processes involving land slides. **Computational River Dynamics** Weiming Wu, 2007-11-15 Comprehensive text on the fundamentals of modeling flow and sediment transport in rivers treating both physical principles and numerical methods for various degrees of complexity. Includes 1 D 2 D both depth and width averaged and 3 D models as well as the integration and coupling of these models. Contains a broad selection

*Informatics, Networking and Intelligent Computing* Jiaxing Zhang, 2015-05-06 This proceedings volume contains selected papers presented at the 2014 International Conference on Informatics Networking and Intelligent Computing held in Shenzhen China. Contributions cover the latest developments and advances in the field of Informatics Networking and Intelligent Computing. **Physics of Petroleum Reservoirs** Xuetao Hu, Shuyong Hu, Fayang Jin, Su Huang, 2017-08-08 This

book introduces in detail the physical and chemical phenomena and processes during petroleum production. It covers the properties of reservoir rocks and fluids, the related methods of determining these properties, the phase behavior of hydrocarbon mixtures, the microscopic mechanism of fluids flowing through reservoir rocks and the primary theories and methods of enhancing oil recovery. It also involves the up to date progress in these areas. It can be used as a reference by researchers and engineers in petroleum engineering and a textbook for students majoring in the area related with petroleum exploitation. **Coastal Engineering** Dominic Reeve, Andrew Chadwick, Christopher Fleming, 2018-03-09 Effective coastal engineering is expensive but it is not as costly as neglect or ineffective intervention. Good practice needs to be based on sound principles but theoretical work and modelling also need to be well grounded in practice which is continuously evolving.

Conceptual and detailed design has been advanced by new industry publications since the publication of the second edition. This third edition provides a number of updates; the sections on wave overtopping have been updated to reflect changes brought in with the recently issued EurOtop II manual; a detailed worked example is given of the calculation of extreme wave conditions for design; additional examples have been included on the reliability of structures and probabilistic design; the method for tidal analysis and calculation of amplitudes and phases of harmonic constituents from water level time series has been introduced in a new appendix together with a worked example of harmonic analysis; and a real life example is included of a design adapting to climate change. This book is especially useful as an information source for undergraduates and engineering MSc students specializing in coastal engineering and management. Readers require a good grounding in basic fluid mechanics or engineering hydraulics and some familiarity with elementary statistical concepts.

**Databases for Data-Centric Geotechnics** Kok-Kwang Phoon, Chong Tang, 2024-12-20. Databases for Data Centric Geotechnics forms a definitive reference and guide to databases in geotechnical and rock engineering to enhance decision making in geotechnical practice using data driven methods. This first volume pertains to site characterization. The opening chapter presents an in depth analysis of site data attributes including the establishment of a new taxonomy of site data under 4S site generalizations: spatial features, sampling characteristics and smart data to provide a novel agenda for data driven site characterization. Type 3 machine learning methods disruptive value are possible as sensors become more pervasive and more intelligent. A comprehensive overview of site characterization information is also presented with a focus on its availability, coverage, value to decision making and challenges. The remaining 13 chapters cover databases of soil and rock properties and the application of these databases to rock socket behavior, rock classification, settlement on soft marine clays, permeability of fine grained soils and liquefaction among others. The databases were compiled from studies undertaken in many countries including Austria, Australia, Brazil, Canada, China, France, Finland, Germany, India, Iran, Japan, Korea, Malaysia, Mexico, New Zealand, Norway, Singapore, Sweden, Thailand, the United Kingdom and the United States. This volume on site characterization is a companion to the volume on geotechnical structures. Databases for Data Centric Geotechnics represents the most diverse and comprehensive assembly of database research in a single publication consisting of two volumes to date. It follows from Model Uncertainties for Foundation Design, also published by CRC Press and suits specialist geotechnical engineers, researchers and graduate students.

**Practical Channel Hydraulics, 2nd edition** Donald W. Knight, Caroline Hazlewood, Rob Lamb, Paul G. Samuels, Koji Shiono, 2018-03-05. Practical Channel Hydraulics is a technical guide for estimating flood water levels in rivers using the innovative software known as the

Conveyance and Afflux Estimation System CES AES The stand alone software is freely available at HR Wallingford s website [www.riverconveyance.net](http://www.riverconveyance.net) The conveyance engine has also been embedded within industry standard river modelling software such as InfoWorks RS and Flood Modeller Pro This 2nd Edition has been greatly expanded through the addition of Chapters 6 8 which now supply the background to the Shiono and Knight Method SKM upon which the CES AES is largely based With the need to estimate river levels more accurately computational methods are now frequently embedded in flood risk management procedures as for example in ISO 18320 Determination of the stage discharge relationship in which both the SKM and CES feature The CES AES incorporates five main components A Roughness Adviser A Conveyance Generator an Uncertainty Estimator a Backwater Module and an Afflux Estimator The SKM provides an alternative approach solving the governing equation analytically or numerically using Excel or with the short FORTRAN program provided Special attention is paid to calculating the distributions of boundary shear stress distributions in channels of different shape and to appropriate formulations for resistance and drag forces including those on trees in floodplains Worked examples are given for flows in a wide range of channel types size shape cover sinuosity ranging from small scale laboratory flumes  $Q \ 2 \ 0 \ 1 \ s \ 1$  to European rivers  $2 \ 000 \ m^3 \ s \ 1$  and large scale world rivers  $23 \ 000 \ m^3 \ s \ 1$  a  $10^7$  range in discharge Sites from rivers in the UK France China New Zealand and Ecuador are considered Topics are introduced initially at a simplified level and get progressively more complex in later chapters This book is intended for post graduate level students and practising engineers or hydrologists engaged in flood risk management as well as those who may simply just wish to learn more about modelling flows in rivers
