Sedimentary Basins And Petroleum Geology Of The Middle East:

Sedimentary Basins and Petroleum Geology of the Middle East A.E.M. Nairn,A.S. Alsharhan,1997-12-11 The wealth of petroleum has made the Middle East one of the most actively explored regions of the world The volume of geological geophysical and geochemical data collected by the petroleum industry in recent decades is enormous The Middle East may be a unique region in the world where the volume of subsurface data and information exceeds that based on surface outcrop This book reviews the tectonic and geological history of the Middle East and the regional hydrocarbon potential on a country by country basis in the context of current ideas developed through seismic and sequence stratigraphy and incorporating the ideas of global sea level change Subsurface data have been used as much as possible to amplify the descriptions The paleogeographic approach provides a means to view the area as a whole While the country by country approach inevitably leads to some repetition it enhances the value of the volume as a teaching tool and underlines some of the changing lithologies within formations carrying the same name Giant Hydrocarbon Reservoirs of The World Paul Mitchell Harris,L. James Weber,2006 Reservoirs described in this volume are located in the Middle East Asia West Africa North and South America The authors explore historical and alternative approaches to reservoir description characterization and management as well as examining appropriate levels and timing of data gathering technology applications evaluation techniques and management practices in various stages in the life of individual development projects The giant fields discussed address issues important to reservoir description characterization and management from both geologic engineering perspectives

Lithosphere Dynamics and Sedimentary Basins of the Arabian Plate and Surrounding Areas François Roure,Ammar A. Amin,Sami Khomsi,Mansour A. M. Al Garni,2016-11-21 This book focuses on the links between deep earth mantle and shallow processes in areas of active tectonics in the Arabian Plate and Surrounding Areas It also provides key information for energy resources in these areas The book is a compilation of selected papers from the Task Force of the International Lithosphere Program ILP It comprises a set of research studies from the Middle East North Africa and the Mediterranean domain focusing on 1 the architecture geodynamic evolution and modelling of the Red Sea rift system and its surroundings and tectonics and sedimentation in the Gulf of Corinth 2 the crustal architecture and georesources of the North Algerian Offshore 3 Reservoirs aquifers and fluid transfers in Saudi Basins Petroleum systems and salt tectonics in Yemen and 4 Cretaceous Eocene foreland inversions in Saudi Arabia *Arabian Plate and Surroundings: Geology, Sedimentary Basins and Georesources* Sami Khomsi,François M. Roure,Mansour Al Garni,Ammar Amin,2019-08-30 This book focuses on the evolution of sedimentary basins of the Arabian Plate and its surroundings Because these sedimentary basins developed in various tectonic settings from extensional or transtensional to flexural transpressional or compressional their sedimentary sequences provide unique records of the regional geology Georesources of the Arabian Plate are also described here including petroleum potential reservoirs water resources fresh water and deep saline aquifers as well as materials and ore

deposits The book is made by a set of papers authored by geoscientists working in both academia and industry Numerous chapters describe some regional important geologic features and selected sedimentary basins from the Middle East North Africa and the Arabian Peninsula domains Other chapters focus on georesources A particular focus is given to the geology of Saudi Arabia This book is an important contribution to the geology of the Arabian Peninsula and its surroundings In view of the strategic and economic importance of the regional geology and georesources of the Arabian Plate and Surroundings this volume will constitute an important reference for a wide range of geoscientists interested in the geology of this region especially those active in petroleum geosciences and related industry Ultimately readers will discover important thematic maps in this book

Unconventional Fossil Fuels The Emirates Center for Strategic Studies and Research, 2014-10-01 With the exploitation of unconventional fossil fuels such as shale oil and gas becoming both economically and technically more feasible and developments of great importance occurring in the pursuit of other unconventional resources we are today witnessing what some have termed a revolution in the means of hydrocarbon extraction Such developments will undoubtedly have major impacts on the dynamics of global energy supply and demand energy markets and prices and on the relative status of traditional producers and consumers The promise of a greater abundance of unconventional hydrocarbon resources has also raised a number of pressing questions and issues relating to the environmental effects of the continued exploitation of fossil fuels These include the potential for and consequences of further legislation to lower carbon emissions implemented by concerned nations around the world as well as the fate of related legislative and economic incentives for the development of renewable energy technologies Based on the proceedings of the ECSSR 19th Annual Energy Conference *Unconventional Fossil Fuels The Next Hydrocarbon Revolution* brings together a group of distinguished experts drawn from industry and academia to provide a strategic outlook for forthcoming developments in the field of unconventional hydrocarbon energy sources The resultant papers compiled in this volume provide both professional and academic perspectives on these highly significant developments in the exploitation of unconventional fossil fuel resources as well as their potential consequences for both producers and consumers

International Approaches to Hydrocarbon Development in Disputed Zones

Eduardo G. Pereira, Marianthi Pappa, Damilola S. Olawuyi, 2024-12-23 This book analyses the legal obstacles associated with the advancement of unitization processes and procedures at an international level Using case studies in international cross border unitization and joint development agreements the book uses regional examples from the Americas Europe Africa and the Middle East It also touches upon case studies related to ongoing disputes from the South China Sea Mediterranean Sea and Gulf of Guinea Focusing on best practices which have influenced the development of the unitization concept the book looks at the formulation of different models and agreements and their potential impact on unexplored hydrocarbon resources particularly in cases where unitization is necessary The book will be of interest to practitioners scholars and students in the field of natural resource law international law and unitization

The Middle and Late Jurassic Intrashelf Basin of the

Eastern Arabian Peninsula A.O. Wilson, 2020-12-04 This memoir provides a thorough review of the geology of the rimmed Arabian Intrashelf Basin reconciling differing interpretations of lithostratigraphy sequence stratigraphy and biostratigraphy Variation of energy levels and facies due to its setting in the SE palaeotrade wind belt are described The roles subtle tectonism played in developing the basin and in the Late Jurassic creating restriction by uplift and exposure of the Tethys shelf are evaluated The intrashelf basin formed during rising sea level as a single rimmed carbonate intrashelf basin A possible global cooling phase resulted in a lowstand which restricted the basin resulting in petrographically unique carbonate source rock facies dominated by cyanobacterial deposition Two subsequent 3rd order carbonate sequences largely filled the basin Eustatic change concomitant with uplift of the Tethys shelf resulted in alternation of carbonates and evaporites gypsum anhydrite across the region The end result was a sealed intrashelf basin which preserved early formed porosity and confined generated hydrocarbons within the intrashelf basin facies

Styles of Continental Contraction

Stefano Mazzoli, Robert W. H. Butler, 2006 This Special Paper includes a selection of material on the various contractional styles and modes of deformation in internal and external zones and in deep and shallow parts of orogens The collection of case studies discusses a broad range of processes and phenomena including thrust tectonic styles detachment dominated vs thick skinned or crustal ramp dominated in different subduction and collision orogens modes and timing of thrust fold and fabric development the role of tectonic inversion processes and of strain localization vs distributed deformation and syn convergence extensional deformation and related tectonic exhumation in orogens Case studies are from the Zagros the Apennines the Appalachians the Tasmanides of Eastern Australia and the Moine Thrust Belt A review of the main subduction and collision related orogens of the world is also provided including the Alps the Himalayas the North American Cordillera the Andes the Caledonides of Scotland the Appalachians the Alice Springs orogeny in Australia and the Aleutian and Makran accretionary wedges Publisher's website

Rollinson, M.P. Searle, I.A. Abbasi, A. Al-Lazki, M.H. Al-Kindi, 2014-04-07 The Oman Mountains contain one of the world's best exposed and best understood fold thrust belts and the largest best exposed and most intensively studied ophiolite complex on Earth This volume presents new international research from authors currently active in the field focusing on the geology of the Oman Mountains the foreland region the carbonate platforms of Northern and Central Oman and the underlying basement complex In addition there is a particular focus on geoconservation in the region The volume is divided into three main sections that discuss the tectonics of the Arabian plate using insights from geophysics petrology structural geology geochronology and palaeontology the petrology and geochemistry of the Oman Ophiolite and the sedimentary and hydrocarbon systems of Oman drawing on the geophysics structure and sedimentology of these systems The volume is enhanced by numerous colour images provided courtesy of Petroleum Development Oman Sedimentary Basins Gerhard Einsele, 2013-06-29 The modern geological sciences are characterized by extraordinarily rapid progress as well as by the development and application of numerous new and refined methods most of them handling an enormous amount of data available from all the continents and oceans Given this state of affairs it seems inevitable that many students and professionals tend to become experts in relatively narrow fields and thereby are in danger of losing a broad view of current knowledge The abundance of new books and symposium volumes testifies to this trend toward specialization However many geologic processes are complex and result from the interaction of many seemingly unrelated individual factors This signifies that we still need generalists who have the broad overview and are able to evaluate the great variety of factors and processes controlling a geologic system such as a sedimentary basin In addition this also means that cooperation with other disciplines in the natural sciences and engineering is increasingly important Modern text books providing this broad overview of the earth sciences are rare Hydrogeology of an Arid Region: The Arabian Gulf and Adjoining Areas A.S. Alsharhan, Z.A. Rizk, A.E.M. Nairn, D.W. Bakhit, S.A. Alhajari, 2001-11-16 This book provides comprehensive information about the water resources of the Arabian Gulf region an area that is symbolic as an arid to extremely arid belt Filling an information gap it provides in depth analyses of both natural and human related constraints on water resources and presents a new vision on efficient management of available water resources It contains an overview of the physical geography and climatic constraints on water resources systematic inventory of available traditional and non traditional water resources water related problems water conservation and legislations comprehensive water laws applicable to the region and modern techniques of water resources investigation This work meets the needs of scientists environmentalists engineers planners and decision makers Senior undergraduate graduate students and researchers of the Gulf area and more generally of arid regions will also find
