Sedimentation of the Wood Bay Formation (Devonian) of Spitsbergen P. F. Structural and Tectonic Modelling and its Application to Petroleum Geology R.M. Larsen,H. Brekke,B.T. Larsen,E. Talleraas,2013-10-22 This monograph presents a unique combination of structural and tectonic modelling with applied petroleum geological problems Focussing on the Norwegian Continental Shelf and neighbouring areas it includes discussion covering all scales from development of sedimentary basins to formation of fractures and joints on a microscale and from exploration to the exploitation of hydrocarbons The book s coverage of structural and tectonic modelling petroleum geology applications and the treatment of the Norwegian Continental Shelf should make this book an invaluable resource book for advanced students of structural and tectonic modelling teachers and researchers as well as for geologists and geophysicists in the petroleum industry Modern and Ancient Fluvial Systems J. D. Collinson,John Lewin,2009-04-15 A book of research articles focused on fluvial processes The book is divided into a several main sections for ease of reference Hydrodynamics and Bedforms Present Day Channel Processes Facies Models and Economic Aspects Geographical and geological investigations are also described in Modern and Ancient Fluvial Systems Research articles include the topics of bedforms and structures near the transition between dunes and a plane bed as well as the vertical and lateral relationships between five major delta distributary channels Research papers are also shared within the publication such as a review of the major developments in the study of channel changes during this century The individual chapter authors take readers from the Colorado Plateau of the Western United States to the Witwatersrand of South Africa *Petroleum Geology of the North European Margin* A. M. Spencer,2012-12-06 Complete Proceedings of the Symposium organised by the Norwegian Petroleum Society and held at Trondheim Norway in 1983 *Geological Survey of Canada, Paper 79-09 , Sedimentary Processes, Environments and Basins* Gary Nichols,Edward Williams,Chris Paola,2009-03-05 For several decades Peter Friend has been one of the leading figures in sedimentary geology and throughout that time he has helped scores of other people by supervising doctoral students collaborating with colleagues especially in developing countries and selflessly sharing ideas with fellow geologists This collection of papers is a survey of the research frontier in basin dynamics a field Peter Friend helped initiate and a token of thanks from people who have benefited from an association with Peter during their careers The papers in this book fall into four themes Tectonics and sedimentation Landscape evolution and provenance Depositional systems and Fluvial sedimentation which reflect Peter s research interests and are all important areas of current research in sedimentary geology There are both case studies and review articles on these themes which reflect recent work but the collection can also be considered to be a sampler of sedimentary geology for anyone with broad interests in the Earth

sciences *The Arctic Ocean* Alan Nairn, 2013-11-22 This trip backward in time capsulizes in a general way the geologic development of the area that is now northern Alaska The Cretaceous through Recent history is predominantly one of erosion of the ancient Brooks Range and filling of the Colville Geosyncline under processes like those in Operation today All the rocks older than Jurassic however were deposited far from their present sites One of the intriguing tectonic puzzles involves the geographic positions and relative timing of events that occurred during the orogeny that built the Brooks Range I suggest that pre Cretaceous deposition took place far to the north along the western margin of the Caledonides Subsequently the region that is now northern Alaska moved southward and impinged upon a northward moving plate or plates from the Pacific region Interactions between these two major parts of the earth's crust produced the Brooks Range during the Jurassic Later developments reflect continuing readjustments of the northern third of of thrust Alaska as southward movement was dissipated in diverse systems faulting and lateral displacement ACKNOWLEDGMENTS I am indebted to many colleagues who during the past 30 years shared with me the excitement and pleasures of exploring the geology of northern Alaska Among these are W P Brosge H N Reiser R L Detterman A K Armstrong A L Bowsher E G Sable I L Tailleux C G Mull M D Mangus A H Lachenbruch M C Lachenbruch R L Morris C J *Skifter om Svalbard og Nordishavet* ,1927 *Principles of Sedimentary Basin Analysis* Andrew D. Miall, 2013-03-09 Review of the second edition For geologists and geophysicists studying sedimentary fill of basins this volume is a valuable addition to their shelves The book is packed with information includes numerous lists of references and is up to date As a source volume this book is second to none It is clear and well organized GEOPHYSICS *Sedimentation of the Wood Bay Formation (Devonian) of Spitsbergen* Peter F. Friend, Mark Moody-Stuart, 1973 *Principles of Sedimentary Basin Analysis* Andrew Miall, 2013-04-17 This book is intended as a practical handbook for those engaged in the task of analyzing the paleogeographic evolution of ancient sedimentary basins The science of stratigraphy and sedimentology is central to such endeavors but although several excellent textbooks on sedimentology have appeared in recent years little has been written about modern stratigraphic methods Sedimentology textbooks tend to take a theoretical approach building from physical and chemical theory and studies of modern environments It is commonly difficult to apply this information to practical problems in ancient rocks and very little guidance is given on methods of observation mapping and interpretation In this book theory is downplayed and the emphasis is on what a geologist can actually see in outcrops well records and cores and what can be obtained using geophysical techniques A new approach is taken to stratigraphy which attempts to explain the genesis of lithostratigraphic units and to de-emphasize the importance of formal description and naming There are also sections explaining principles of facies analysis basin mapping methods depositional systems and the study of basin thermal history so important to the genesis of fuels and minerals Lastly an attempt is made to tie everything together by considering basins in the context of plate tectonics and eustatic sea level changes *Developments and Applications of Geomorphology* J. E. Costa, P. J. Fleisher, 2012-12-06 The last

decade has seen a remarkable increase in the application of geomorphology for numerous projects and investigations. Geomorphology is now viewed as an indispensable partner of engineering and geology in the world of applied science. For a discipline with few independent theories of its own, geomorphology has become a cosmopolitan science drawing on many topics from allied sciences. To compile a list of successful and viable applications and contributions would be an arduous chore if not an impossible task. Instead, we have compiled a set of invited papers that represent some of the practical developments and uses of geomorphology over the past decade. Such a compilation of papers will reflect our own backgrounds, biases, associations, and personal and professional experiences. We make no apologies for the topics omitted but recognize that this volume could be prohibitively large if all the subdivisions of geomorphology were equally and fully covered. Our goal in assembling the papers for this volume was to emphasize the concepts, principles, and applications of geomorphology. While techniques, procedures, and practical applications are stressed, the reason for each investigation is as important as the method employed. This book therefore represents the methods used and reasons for applying geomorphology. Where case studies are used, they serve as examples that can be applied in related situations, similar settings, and other locations. The authors have successfully addressed this goal in a broad selection of chapter topics.

Correlation in Hydrocarbon Exploration John Collinson, 2012-12-06. This book is the published record of the papers presented at a conference of the Norwegian Petroleum Society (NPF) held in Bergen, Norway, on 3-5 October 1988. The conference was initially proposed and promoted by the Geology and Geophysics Advisory Committee of the Norwegian Petroleum Society, consisting of A. M. Spencer (Chairman), M. Brink, J. D. Collinson, S. Hanslien, D. M. D. James, T. B. Lund, K. Messel, E. Ormaasen, and G. Saeland. The programme and more detailed planning of the conference was carried out by a programme committee consisting of J. D. Collinson (Chairman), O. Eldholm, E. Holter, D. M. D. James, H. Tykoezinski, D. Worsley, and S. M. Aasheim. There were 245 participants at the meeting, and 36 papers were presented as talks, with a further 9 presented as posters. These proceedings are representative of the range of topics covered. The meeting was characterized by a high level of discussion, which has influenced several authors in the final preparation of their written papers. These proceedings have been edited on behalf of the Norwegian Petroleum Society by J. D. Collinson, with help from H. Tykoezinski. The editor and the organizing committee wish to thank all the referees who reviewed papers and all the authors who responded so fully and promptly to their comments. The NPF is most grateful to the University of Bergen for making available their facilities for the conference.

The Making of a Land Ivar B. Ramberg, 2008. *The Making of a Land: Geology of Norway* takes the reader on a journey in geological time from primordial times to the present day. A fantastic journey from the summits of Norway's spectacular rugged and weather-beaten mountains to the riches concealed in the sedimentary rocks on the continental shelf. This book displays the treasures of Norwegian geology for everyone to see. Norway's geological resources represent the foundation of its welfare state. During several centuries, first the mining and then the oil industries have been economic mainstays, and this

will continue in the future The book presents a description both of Norway and the planet we inhabit and depend on for our survival It is lavishly illustrated with photographs and maps from all over the country Precambrian Geology and Metamorphic Petrology Qian Xianglin,Zhengdong You, Henry Campbell Halls,1998 The proceedings of the 30th International Geological Congress held in Beijing China in August 1997 This volume focuses on Precambrian geology and metamorphic petrology It aims to present a view of contemporary geology to researchers interested in the geological sciences *Cyclic Sedimentation* ,1967-01-01 This book provides an overview of the developments in sedimentology Despite the existence of a huge literature this is the first time that a textbook has been written on the subject of cyclic sedimentation The book tries to cover as much of the relevant data as is necessary to allow for adequate consideration of all significant hypotheses

Sedimentology of Coal and Coal-Bearing Sequences R. A. Rahmani,R. M. Flores,2009-04-15 The recent increase in the search for coal has initiated a dramatic growth in sedimentological research on the origin formation and environment of coal deposition This publication is concerned with perhaps the most important field of coal research that of coal environments This subject involves many interrelated disciplines including the sedimentology petrology geochemistry palaeobotany and palaeogeography of coal deposits In the past workers in these fields have operated independently and only recently have their research efforts been integrated to provide a more comprehensive understanding of coal depositional environments
