Food Policy for the Poor Joachim Von Braun, Rajul Pandya-Lorch, 2005-01-01

Eco Crime and Genetically Modified Food Reece Walters, 2010-10-04 The GM debate has been ongoing for over a decade yet it has been contained in the scientific world and presented in technical terms Eco Crime and Genetically Modified Food brings the debates about GM food into the social and criminological arena This book highlights the criminal and harmful actions of state and corporate officials It concludes that corporate and political corruption uncertain science bitter public opposition growing farmer concern and bankruptcy irreversible damage to biodiversity corporate monopolies and exploitation disregard for social and cultural practices devastation of small scale and local agricultural economies imminent threats to organics weak regulation and widespread political and biotech mistrust do not provide the bases for advancing and progressing GM foods into the next decade Yet with the backing of the WTO the US and UK Governments march on but at what cost to future generations

GMO China Cong Cao, 2018-10-02 In China as elsewhere the debate over genetically modified organisms has become polarized into anti and pro GMO camps Given the size of China's population and market much is at stake in conflicts over regulation for domestic as well as international actors In this book Cong Cao provides an even handed analysis that illuminates the tensions that have shaped China's policy toward agricultural biotechnology in a global perspective Cao presents a comprehensive and systematic analysis of how China's policy toward research and commercialization of genetically modified crops has shifted that explains how China's changing GMO stances reflect its evolving position on the world stage While China's scientific community has set the agenda it has encountered resistance rooted in concerns over food safety and consumers rights as well as issues of intellectual property rights and food sovereignty Although Chinese leaders at first sought to take advantage of the biotech revolution by promoting GMO crop consumption Cao demonstrates that policy has since become precautionary as seen in new laws and regulations grounded in concerns over safety and the deferral of commercialization of GM rice He presents China's policies in light of changing global attitudes toward GM crops As shifts in China have closely followed global trends so has domestic activism Drawing on government and scientific documents as well as interviews with scientists officials policy analysts activists and journalists GMO China is an important book for China studies science and technology studies policy analysts and professionals interested in the Chinese biotechnology market

The Political Economy of Food System Transformation Danielle Resnick, Johan Swinnen, 2023-09-21

This is an open access title available under the terms of a CC BY NC 4.0 International licence. It is free to read at Oxford Academic and offered as a free PDF download from OUP and selected open access locations. The current structure of the global food system is increasingly recognized as unsustainable. In addition to the environmental impacts of agricultural production, unequal patterns of food access and availability are contributing to non-communicable diseases in middle and high income countries and inadequate caloric intake and dietary diversity among the world's poorest. To this end, there have been a growing number of academic and policy initiatives aimed at advancing food system transformation, including the 2021 UN Food Systems Summit, the Sustainable Development Goals (SDGs) and several UN Climate conferences. Yet the policy pathways for achieving a transformed food system are highly contested and the enabling conditions for implementation are frequently absent. Furthermore, a broad range of polarizing factors affect decisions over the food system at domestic and international levels, from debates over values and misinformation to concerns over food self-sufficiency, corporate influence and human rights. This volume explicitly analyses the political economy dynamics of food system transformation with contributors who span several disciplines, including economics, ecology, geography, nutrition, political science and public policy. The chapters collectively address the range of interests, institutions and power in the food system, the diversity of coalitions that form around food policy issues and the tactics they employ, the ways in which policies can be designed and sequenced to overcome opposition to reform and processes of policy adaptation and learning. Drawing on original surveys, interviews, empirical modelling and case studies from China, the European Union, Germany, Mexico, South Asia, sub-Saharan Africa and the United States, the book touches on issues as wide-ranging as repurposing agricultural subsidies, agricultural trade, biotechnology innovations, red meat consumption, sugar-sweetened beverage taxes and much more.

Values and Objectivity in Science Hugh Lacey, 2005-06-28. Values and Objectivity in Science illuminates many of the ethical issues that arise concerning scientific practices and applications, offering an account of how social and ethical values play important roles within science. Hugh Lacey develops and clarifies his previous analysis by arguing for the importance of research being conducted under a plurality of strategies, contrasting materialist strategies with agro-ecological strategies. By displaying the structure of current ethical controversies about the legitimacy of planting transgenic crops, this book illustrates that sound thinking on such issues must be grounded on an adequate philosophy of science, one that can clearly distinguish between the proper and the distorting roles of values in scientific practices. This book will prove useful for science students and practitioners as well as those interested in the growing ethical questions involved in scientific practices.

The New Famines Stephen Devereux, 2006-11-22. The recent occurrences of famine in Ethiopia and Southern Africa have propelled this key issue back into the public arena for the first time since 1984, as once again it becomes a priority not only for lesser developed countries but also for the international community. Exploring the paradox that is the persistence of famine in the contemporary world, this book looks at the way the nature of famine is changing in the face of globalization and shifting geo-

political forces The book challenges perceived wisdom about the causes of famine and analyzes the worst cases of recent years including close analysis of food scarcity in North Korea Ethiopia Sudan and Malawi and less well known cases in Madagascar Iraq and Bosnia With fresh conceptual frameworks and analytical tools major theoretical constructs which have previously been applied to analyze famines such as the democracy ends famine argument Sen s entitlement approach and the complex political emergency framework are confronted This volume assembles an international team of contributors including Marcus Noland Alex de Waal and Dan Maxwell an impressive roster which helps make this book an important resource for those in the fields of development studies and political economics

Food and Agricultural Biotechnology in Ethical Perspective Paul B. Thompson, 2020-11-09 This 3rd edition of Food and Agricultural Biotechnology in Ethical Perspective updates Thompson s analysis to reflect the next generation of biotechnology including synthetic biology gene editing and gene drives The first two editions of this book published as Food Biotechnology in Ethical Perspective in 1997 and 2007 were the first comprehensive philosophical studies of genetic engineering applied to food systems The book is structured with chapter length treatments of risk in four categories food safety to animals to the environment and socio economic risks These chapters are preceded by two chapters providing orientation to the uses of gene technology in food and agriculture and to the goals methods and background assumptions of technological ethics There is also a chapter covering all four types of risk as applied to the first US technology recombinant bovine somatotropin The last four chapters take up 1 intellectual property debates 2 religious metaphysical and intrinsic objections to biotechnology 3 issues in risk and trust and 4 a review of ethical issues in synthetic biology gene editing and gene drives the three key technologies that have emerged since the book was last revised

Ending Hunger in Our Lifetime C. Ford Runge, Benjamin Senauer, Philip G. Pardey, Mark W. Rosegrant, 2003-07-08 At a time in history when conflict erupts daily in far flung corners of the world ending severe deprivation may be critical to global peace and stability Yet we are far from reaching the goal of reducing hunger by 2025 The authors of this book bring good news hunger can be banished in our lifetime They first distill what is already known about fighting hunger and then report on important new research findings and projections that show it can be done through new and renewed institutions scientific innovation global economics and investment and sustainable environmental practices Although the book encompasses a wide array of ideas arguments facts and figures it is not a dry academic text Anyone wanting a better understanding of poverty and hunger and how to end it will benefit from reading it

Asia Kevin Hillstrom, Laurie Collier Hillstrom, 2003-06-23 A concise yet thorough overview of the environmental issues problems and controversies facing the world s largest and most populous continent Asia Asia tackles the tough issues the complex problems and the political controversies surrounding the environment of this vast landmass This volume encompasses everything from economics land use energy and transportation to air pollution rivers and lakes oceans and species and habitat protection In Malaysia unchecked discharges of industrial waste and human sewage led the government to label 42 of

its rivers officially dead According to some estimates Southeast Asia alone accounts for more than half of the world's total transport of sediment to the oceans In the Philippines the Chico River dam project which would have subjected 100 000 tribespeople to relocation was canceled when the World Bank withdrew funding after fierce resistance from the indigenous people This fascinating book offers a comprehensive look at how the most populated continent on earth contends with its complicated environment *Biodiversity and the Law* Charles R. McManis, 2012-05-04 How do we promote global economic development while simultaneously preserving local biological and cultural diversity This authoritative volume written by leading legal experts and biological and social scientists from around the world aims to address this question in all of its complexity The first part of the book focuses on biodiversity and examines what we are losing why and what is to be done The second part addresses biotechnology and looks at whether it is part of the solution or part of the problem or perhaps both The third section examines traditional knowledge explains what it is and how if at all it should be protected The fourth and final part looks at ethnobotany and bioprospecting and offers practical lessons from the vast and diverse experiences of the contributors *The Political Economy of Agricultural and Food Policies* Johan Swinnen, 2018-05-24 Winner of the European Association of Agricultural Economists Book Award Food and agriculture have been subject to heavy handed government interventions throughout much of history and across the globe both in developing and in developed countries Today more than half a trillion US dollars are spent by some governments to support farmers while other governments impose regulations and taxes that hurt farmers Some policies such as price regulations and tariffs distribute income but reduce total welfare by introducing economic distortions Other policies such as public investments in research food standards or land reforms may increase total welfare but these policies come also with distributional effects These distributional effects influence the preferences of interest groups and in turn influence policy decisions Political considerations are therefore crucial to understand how agricultural and food policies are determined to identify the constraints within which welfare enhancing reforms are possible or not and finally to understand how coalitions can be created to stimulate growth and reduce poverty *Food, Inc.* Peter Pringle, 2010-05-11 For most people the global war over genetically modified foods is a distant and confusing one The battles are conducted in the mystifying language of genetics A handful of corporate life science giants such as Monsanto are pitted against a worldwide network of anticorporate ecowarriors like Greenpeace And yet the possible benefits of biotech agriculture to our food supply are too vital to be left to either partisan The companies claim to be leading a new agricultural revolution that will save the world with crops modified to survive frost drought pests and plague The greens warn that playing God with plant genes is dangerous It could create new allergies upset ecosystems destroy biodiversity and produce uncontrollable mutations Worst of all the antibiotech forces say a single food conglomerate could end up telling us what to eat In *Food Inc* acclaimed journalist Peter Pringle shows how both sides in this overheated conflict have made false promises engaged in propaganda science and indulged in fear

mongering In this urgent dispatch he suggests that a fertile partnership between consumers corporations scientists and farmers could still allow the biotech harvest to reach its full potential in helping to overcome the problem of world hunger providing nutritious food and keeping the environment healthy

Africa & the Middle East Kevin Hillstrom,Laurie Collier Hillstrom,2003-11-17 A concise yet thorough overview of the environmental issues problems and controversies facing the continent of Africa and the Middle East Examining both the rich biological heritage of the world s second largest continent and the very serious human threats to it Africa and the Middle East explores the impact global pollution and a burgeoning population are having on landscape and wildlife alike How is global warming responsible for the rapidly expanding Sahara Desert Can local populations be recruited to preserve threatened species Over 80 percent of Madagascar s species are endemic the highest percentage of any major ecological region in the world such as the highly endangered aye aye which resembles a cross between a monkey a bat and a woodpecker and the giraffe necked weevil a red rainforest insect with a neck like a fire truck rescue ladder Readers will learn all about these fascinating species and much more

The Man who Fed the World Leon F. Hesser,2006 The Man Who Fed the World provides a loving and respectful portrait of one of America s greatest heroes Nobel Peace Prize recipient for averting hunger and famine Dr Norman Borlang is credited with saving hundreds of millions of lives from starvation more than any other person in history Loved by millions around the world Dr Borlang is recognized as one of the most influential men of the twentieth century

India's Economy Raj Kapila,Uma Kapila,2006 Featuring 20 articles from leading economic development experts this collection provides rare insight into the challenges facing India following the country s entry into the world economy From growth poverty and reform to globalization and sectoral developments the essays address potential problems but coalesce to form an optimistic picture of India s future A potential root of the nation s current problems tardy or incomplete policy implementation is also discussed

Transgenics and the Poor Ronald J. Herring,2013-09-13 Genetic engineering is changing the terrain of development studies Technologies with unprecedented potential the capacity to move genes across species have created widely politicized phenomena Frankenfoods GMOs and The Terminator En masse the public has reacted with equanimity or appreciation to genetically engineered pharmaceuticals beginning with insulin but transgenics in food and agriculture have raised a globally contentious politics This book begins with the needs of the poor for income nutrition environmental integrity and evaluates the theory and evidence for contributions from transgenic crops Social scientists with expertise in regional studies economics sociology agriculture and political science join biologists to bring specialized knowledge on genuinely new questions created by the genomics revolution questions of ecological integrity biodiversity international trade the costs and effectiveness of biosafety protocols The authors collectively conclude that predictions of disaster for the poor from transgenic technology are uninformed by empirical results rest on misunderstandings of biotechnology or the poor or both or get the science wrong Yet the triumphalism of pro transgenic forces however must be tempered by serious unanswered questions much is unknown but

the transgenic genie is out of the bottle In this much needed book an emergent empirical literature allows scholars in disciplines ranging from micro biology to economics and political science to assess the potential effects of transgenic organisms on poverty through multiple dynamics of property yields prices biodiversity environmental integrity and nutrition

The Fight Against Hunger and Malnutrition David E. Sahn, 2015-05-21 Advances in science and policy during the past 50 years have prevented the predicted widespread food shortages as the world's population soared Malnutrition however remains prevalent This book details strategies and practical approaches designed to alleviate hunger and malnutrition in a new era where technological change markets patterns of governance and social programs have an increasingly global dimension More specifically this book addresses a range of considerations including the role of small farmers in a world where the global reach of multinational corporations have enormous control from the farm to local markets and the grocery store misgivings and misperceptions about genetically modified foods the increasing competition of food and energy sectors for agricultural output the importance of micronutrient deficiencies and chronic disease related to obesity which often coexists in the same communities as hunger and issues of sustainability of the food and agricultural system in an period when there is increasing concerns over global warming and environmental degradation Currently there is also more emphasis on evidence based policymaking which has raised the standard of proof for evaluating the impact of micro level interventions that have traditionally been so widely embraced and are now under increased scrutiny It is in this context that this book provides practical advice on programs that can effectively target those at greatest risk of malnutrition and guidance on policies to promote a healthy and sustainable food and agricultural system Overlaying all of these challenges is the book's emphasis on both identifying data and information needs for decision making and practical considerations for better understanding the domestic and international political and social constraints that need to be addressed when trying to translate scientific knowledge and information into practice

When Cooperation Fails Mark A. Pollack, Gregory C. Shaffer, 2009-05-21 The dispute over genetically modified organisms has brought the US and the EU into conflict This book examines the dynamic interactions of domestic law and politics transnational networks international regimes and global markets through a theoretically grounded and empirically comprehensive analysis of the governance of GM foods and crops
