Geoffrey R. Stone

Seeds Of Repression:

Seeds of Repression Athan G. Theoharis, 1977 **Perilous Times** Geoffrey R. Stone, 2004 Geoffrey Stone's *Perilous Times* incisively investigates how the First Amendment and other civil liberties have been compromised in America during wartime. Stone delineates the consistent suppression of free speech in six historical periods from the Sedition Act of 1798 to the Vietnam War and ends with a coda that examines the state of civil liberties in the Bush era. Full of fresh legal and historical insight, *Perilous Times* magisterially presents a dramatic cast of characters who influenced the course of history over a two hundred year period from the presidents Adams, Lincoln, Wilson, Roosevelt and Nixon to the Supreme Court justices Taney, Holmes, Brandeis, Black and Warren to the resisters Clement Vallandigham, Emma Goldman, Fred Korematsu and David Dellinger. Filled with dozens of rare photographs, posters and historical illustrations, *Perilous Times* is resonant in its call for a new approach in our response to grave crises.

Seeds of Repression; Harry S. Truman and the Origins of McCarthyism Athan G. Theoharis, 1971 *Embryogenesis* Ken-Ichi Sato, 2012-04-20 The book *Embryogenesis* is a compilation of cutting edge views of current trends in modern developmental biology focusing on gametogenesis, fertilization, early and/or late embryogenesis in animals, plants and some other small organisms. Each of 27 chapters contributed from the authorships of world wide 20 countries provides an introduction as well as an in depth review to classical as well as contemporary problems that challenge to understand how living organisms are born, grow and reproduce at the levels from molecule and cell to individual.

The Politics of Racism Ann Gomer Sunahara, 2020-03-31 *The Politics of Racism: The Uprooting of Japanese Canadians During the Second World War* is the first book to fully document the politics behind the 1942 expulsion order that saw 20,000 Japanese Canadians evicted from their homes in British Columbia and sent inland to work camps, detention centres and farms in Alberta and Manitoba. The book details the relationship between racism and political expediency and shows how political parties and the affairs of the nation were controlled by a small group of politicians who scapegoated minorities to hang on to power. Most alarmingly, *The Politics of Racism* shows how easily Canadians allowed themselves to be manipulated by a political process that used fear and war hysteria in a very cynical and calculated way. Ann Sunahara has used previously classified government documents and the wartime records of the Liberal government to reveal a startling new portrait of political connivance that shows Mackenzie King bowing to the pressures of a small number of B.C. politicians who saw the Japanese problem as a useful tool to enhance their status and win favours in Ottawa. Branded as traitors in the eyes of many of their countrymen, unaware that the military had opposed their uprooting without political friends and allies except for the CCF, the Japanese Canadians were powerless, a muffled minority within a country at war. Ann Sunahara has woven together her analysis of government documents with the personal memories of victims of that shameful period. The accounts of the victims and the official records provide a poignant and powerful indictment of the politicians who used racism and fear to further their own careers and of a society whose indifference let it

happen Since the 1981 version of The Politics of Racism POR1981 was published it has undergone two further editions an HTML version in 2000 POR2000 with an additional afterward about Redress and an e book edition POR2020 with an additional photo essay by the author Both are published at japanesecanadianhistory.ca Gulag Realities Sebastian Farnham, AI, 2025-03-20 Gulag Realities explores the Soviet Gulag system a network of forced labor camps and its devastating impact on Soviet society The book examines how a state built on the premise of equality could operate such a brutal system of political repression It delves into the Gulag s role within the Soviet economy highlighting how it was an integral part of resource extraction and heavy industry Furthermore the book investigates the dehumanization process inflicted on prisoners stripping them of their identities and turning them into expendable tools of the state The book argues that the Gulag system was not an aberration but a consequence of Soviet ideology and political practices It reveals the historical and ideological roots of the Gulag tracing its evolution from the Bolshevik Revolution to its peak under Stalin A significant portion of the book explores the daily realities of life within the camps detailing the harsh living conditions and the brutal treatment of political prisoners The book unfolds in a structured manner beginning with the historical context and progressing to the experiences within the camps and the long term impact on Soviet society By drawing upon archival documents memoirs and scholarly analyses Gulag Realities offers a comprehensive understanding of the Gulag s structure function and lasting consequences making it valuable for students academics and anyone interested in Soviet history and human rights

Improving of Seed Quality and Yield in Model and Crop Plants Daoquan Xiang,Zhaorong Hu ,Raju Datla,2025-03-06 Seed development represents an important phase of the life cycle in sexually reproducing plant species A seed is a complex organ system of three components the embryo that contributes to germline continuity endosperm for nourishment and the seed coat for protection The developmental programs and the associated events that culminate in the production of a mature seed are highly complex and require precisely coordinated integration of the genetic molecular biochemical metabolic and physiological pathways and their interactions with environmental cues Research advances in seed development using model and crop species such as Arabidopsis rice maize wheat and Brassica species have uncovered several key genes and pathways that regulate the cell and tissue specification differentiation and growth programs The key findings from these studies are helping to develop a framework for advancing the knowledge and understanding of the process and the underpinning molecular mechanisms of an embryo endosperm and seed coat development However knowledge gaps still exist in understanding the regulating networks and metabolic programs involved in defining several important seed traits associated with seed quality and yield especially in crop plants Continued rapid advances in omics technologies have contributed to the development of several critical tools for performing genome epigenome transcriptome proteome and metabolome studies and their applications in seed development Bioinformatics and computational tools are also playing important contributions in the large scale genome wide systems level analysis modeling and predictions to identify and characterize the underpinning mechanisms that support seed formation A holistic understanding of the complexities and interactions that drive seed development is becoming increasingly possible with the application of omics tools to decipher gene protein and metabolite networks In the proposed Research Topic we highlight current advances in genomics proteomics lipidomics metabolomics metagenomics transcriptomics and phenomics studies of seed development in both model and crop species We aim to further elucidate how these key genetic regulators and pathway genes act together to control cell division patterning differentiation and storage reserve accumulation during seed development how these critical processes coordinate to define the seed as a whole and how the genetic and regulatory networks function to generate tremendous natural diversity in the size number and compositional aspects of plant seeds

Abiotic Stress Signaling in Plants: Functional Genomic Intervention Girdhar K. Pandey, Manoj Prasad, Amita Pandey, Maik Boehmer, 2016-08-08 Abiotic stresses such as high temperature low temperature drought and salinity limit crop productivity worldwide Understanding plant responses to these stresses is essential for rational engineering of crop plants In Arabidopsis the signal transduction pathways for abiotic stresses light several phytohormones and pathogenesis have been elucidated A significant portion of plant genomes Arabidopsis and rice were mostly studied encodes for proteins involves in signaling such as receptor sensors kinases phosphatases transcription factors and transporters channels Despite decades of physiological and molecular effort knowledge pertaining to how plants sense and transduce low and high temperature low water availability drought water submergence microgravity and salinity signals is still a major question for plant biologist One major constraint hampering our understanding of these signal transduction processes in plants has been the lack or slow pace of application of molecular genomic and genetics knowledge in the form of gene function In the post genomic era one of the major challenges is investigation and understanding of multiple genes and gene families regulating a particular physiological and developmental aspect of plant life cycle One of the important physiological processes is regulation of stress response which leads to adaptation or adjustment in response to adverse stimuli With the holistic understanding of the signaling pathways involving not only one gene family but multiple genes or gene families plant biologist can lay a foundation for designing and generating future crops which can withstand the higher degree of environmental stresses especially abiotic stresses which are the major cause of crop loss throughout the world without losing crop yield and productivity Therefore in this e Book we intend to incorporate the contribution from leading plant biologists to elucidate several aspects of stress signaling by functional genomics approaches

Seed Dormancy Angel J. Matilla, 2020-11-13 The appearance of the new generation in higher plants is ensured by the presence of viable seeds in the mother plant A good number of signaling networks is necessary to provoke germination Phytohormones play a key role in all stages of seed development maturation and dormancy acquisition The dormancy of some seeds can be relieved through a tightly regulated process called after ripening AR that occurs in viable seeds stored in a dry environment Although ABA is

directly involved in dormancy recent data suggest that auxin also plays a preponderant role On the other hand the participation of reactive oxygen species ROS in the life of the seed is becoming increasingly confirmed ROS accumulate at different stages of the seed s life and are correlated with a low degree of dormancy Thus ROS increase upon AR and dormancy release In the last decade the advances in the knowledge of seed life have been noteworthy In this Special Issue those processes regulated by DOG1 auxin and nucleic acid modifications are updated Likewise new data on the effect of alternating temperatures AT on dormancy release are here present On the one hand the transcriptome patterns stimulated at AT that encompasses ethylene and ROS signaling and metabolism together with ABA degradation were also discussed Finally it was also suggested that changes in endogenous aminobutyric acid GABA may prevent seed germination Advances in Seed Biology Paolo A. Sabelli,Brian A. Larkins,2015-11-11 The seed plays a fundamental role in plant reproduction as well as a key source of energy nutrients and raw materials for developing and sustaining humanity With an expanding and generally more affluent world population projected to reach nine billion by mid century coupled to diminishing availability of inputs agriculture is facing increasing challenges to ensure sufficient grain production A deeper understanding of seed development evolution and physiology will undoubtedly provide a fundamental basis to improve plant breeding practices and ultimately crop yields Recent advances in genetic biochemical molecular and physiological research mostly brought about by the deployment of novel high throughput and high sensitivity technologies have begun to uncover and connect the molecular networks that control and integrate different aspects of seed development and help determine the economic value of grain crops with unprecedented details The objective of this e book is to provide a compilation of original research articles reviews hypotheses and perspectives that have recently been published in Frontiers in Plant Science Plant Evolution and Development as part of the Research Topic entitled Advances in Seed Biology Editing this Research Topic has been an extremely interesting educational and rewarding experience and we sincerely thank all authors who contributed their expertise and in depth knowledge of the different topics discussed We hope that the information presented here will help to establish the state of the art of this field and will convey how exciting and important studying seeds is and hopefully will stimulate a new crop of scientists devoted to investigating the biology of seeds Epigenetic Memory and Control in Plants Gideon Grafi,Nir Ohad,2013-04-18 Epigenetics commonly acts at the chromatin level modulating its structure and consequently its function in gene expression and as such plays a critical role in plant response to internal and external cues This book highlights recent advances in our understanding of epigenetic mechanisms as a major determinant through which internal and external signals such as those occurring during hybridization flowering time reproduction and response to stress communicate with plant cells to bring about activation of multiple nuclear processes and consequently plant growth and development The outcome of these processes may persist for generations long after the initial cues have expired and may contribute to plant evolution **Molecular Genetics, Genomics and Biotechnology of Crop Plants Breeding** Søren K.

Rasmussen,2020-05-27 This Special Issue on molecular genetics genomics and biotechnology in crop plant breeding seeks to encourage the use of the tools currently available It features nine research papers that address quality traits grain yield and mutations by exploring cytoplasmic male sterility the delicate control of flowering in rice the removal of anti nutritional factors the use and development of new technologies for non model species marker technology site directed mutagenesis and GMO regulation genomics selection and genome wide association studies how to cope with abiotic stress and an exploration of fruit trees adapted to harsh environments for breeding purposes A further four papers review the genetics of pre harvest spouting readiness for climate smart crop development genomic selection in the breeding of cereal crops and the large numbers of mutants in straw lignin biosynthesis and deposition Seed Endophytes Satish Kumar Verma,James Francis White, Jr,2019-04-05 This book focuses on the importance and roles of seed microbiomes in sustainable agriculture by exploring the diversity of microbes vectored on and within seeds of both cultivated and non cultivated plants It provides essential insights into how seeds can be adapted to enhance microbiome vectoring how damaged seed microbiomes can be assembled again and how seed microbiomes can be conserved Plant seeds carry not only embryos and nutrients to fuel early seedling growth but also microbes that modulate development soil nutrient acquisition and defense against pathogens and other stressors Many of these microbes bacteria and fungi become endophytic entering into the tissues of plants and typically exist within plants without inducing negative effects Although they have been reported in all plants examined to date the extent to which plants rely on seed vectored microbiomes to enhance seedling competitiveness and survival is largely unappreciated How microbesfunction to increase the fitness of seedlings is also little understood The book is a unique and important resource for researchers and students in microbial ecology and biotechnology Further it appeals to applied academic and industrial agriculturists interested in increasing crop health and yield
