Seeds J. Derek Bewley, Michael Black, 1994-07-31 In response to enormous recent advances particularly in molecular biology the authors have revised their warmly received work This new edition includes updates on seed development gene expression dormancy and other subjects It will serve as the field's standard textbook and reference source for many years to come

Seeds J. Bewley, 2012-12-06 Since the publication of our monograph on seed physiology and biochemistry *The Physiology and Biochemistry of Seeds in Relation to Germination* Springer Verlag 1978 1982 it has been suggested to us that a text covering the same subject area would be appropriate This book is our response Unlike the previous volumes however this text is not intended to be either a critical or a comprehensive account Instead it is a more generalized consideration of the essential aspects of seed physiology and biochemistry as we see them It also includes a substantial amount of new and different material In a work of this sort it is inevitable that some simplifications must be made but we hope nevertheless that we have presented the most reasonable conspectus of areas of controversy and uncertainty In this respect literature citations have been kept to a minimum and do not interrupt the text they are placed at the end of each chapter and are intended to be used as a source for further references We hope that this book will be of value to students and teachers in universities colleges and other institutes of higher learning whose courses include plant biology Although it is particularly appropriate for studies of seed biology it should also find broader applications in general plant physiology agriculture and horticulture

Larkins, Indra K. Vasil, 1997-09-30 The beginnings of human civilization can be traced back to the time nearly 12 000 years ago when the early humans gradually changed from a life of hunting and gathering food to producing food This beginning of primitive agriculture ensured a dependable supply of food and fostered the living together of people in groups and the development of society During this time plant seeds were recognized as a valuable source of food and nutrition and began to be used for growing plants for food Ever since plant seeds have played an important role in the development of the human civilization Even today seeds of a few crop species such as the cereals and legumes are the primary source of most human food and the predominant commodity in international agriculture Owing to their great importance as food for humans and in international trade seeds have been a favorite object of study by developmental biologists and physiologists nutritionists and chemists A wealth of useful information is available on the biology of seeds Seeds: Anti-proliferative Storehouse for Bioactive Secondary Metabolites Dilipkumar Pal, 2024-08-31 This book presents extensive and up to date information on the anti proliferative properties of various plant seeds for their application in pharmaceutical industry and medicinal research This information is imperative for understanding and developing high quality products from the seeds The book provides insights about anticancer and antitumour activities present in seeds Different chapters cover the traditional knowledge as well as recent innovations in various seeds such as prune pumpkin grape fruit sesame sunflower bitter melon papaya mango apple black plum cumin water melon musk melon cotton carambola pear cardamom moringa wallich Chinese cabbage pistachio etc and their bioactivities for the applications in cancer and malignancy proliferation The book introduces the readers to seed as a bioactive compound and delineates the various health effects It further explains the relation between the different metabolites and their effect on cell proliferation Finally the book goes on to explain different seeds and their specific anti cancer properties This book is useful for students and researchers of pharmacology botany and cancer research It also caters to industry experts in pharmaceutical sciences **Seeds, 3rd Edition** Robert S. Gallagher, 2013-12-06 The 3rd edition of *Seeds The Ecology of Regeneration in Plant Communities* highlights the many advances in the field of seed ecology and its relationship to plant community dynamics that have taken place in recent years The new edition also features chapters on seed development and morphology seed chemical ecology implications of climate

change on regeneration by seed and the functional role of seed banks in agricultural and natural ecosystems The book is aimed at advanced level students and researchers in the fields of seed science seed ecology and plant ecology

of *Food Legumes* Aditya Pratap, Jitendra Kumar, 2011-03-01 Food legumes are important constituents of the human diet and animal feed where they are crucial to a balanced diet supplying high quality proteins. These crops also play an important role in low input agricultural production systems by fixing atmospheric nitrogen. Despite systematic and continuous breeding efforts through conventional methods, substantial genetic gains have not been achieved. With the rise in demand for food legumes, pulses and increased market value of these crops, research has focused on increasing production and improving the quality of pulses for both edible and industrial use.

Seed Biology and Yield of Grain Crops, 2nd Edition Dennis B Egli, 2017-02-23 This new edition of an established title examines the determination of grain crop yield from a unique perspective by concentrating on the influence of the seed itself. As the food supply for an expanding world population is based on grain crops harvested for their seeds, understanding the process of seed growth and its regulation is crucial to our efforts to increase production and meet the needs of that population. Yield of grain crops is determined by their assimilatory processes such as photosynthesis and the biosynthetic processes in the seed, which are partly regulated within the seed itself. Substantially updated with new research and further developments of the practical applications of the concepts explored, this book is essential reading for those concerned with seed science and crop yield, including agronomists, crop physiologists, plant breeders and extension workers. It is also a valuable source of information for lecturers and graduate students of agronomy and plant physiology.

Seeds Handbook Babasaheb B. Desai, 2004-04-22 Revised and expanded throughout, this latest edition of the bestselling *Seeds Handbook: Biology, Production, Processing and Storage* includes valuable information on all areas of seed biology, production and processing. The author, one of the most respected and prolific scientists in the field, identifies current developments in seed testing and certification, storage, transportation and distribution. Tracking the evolution and advancement of seed industries and technologies, he fully covers the development and supply of high quality seeds for every key agronomic and horticulture crop. Contains methods to enhance the genetic and physiological characteristics of more than 80 major and minor crops. With an abundance of current research and additional figures and illustrations, this edition of the *Seeds Handbook* offers chapters on modern biotechnological issues such as the production of synthetic seeds, loss reduction, biotechnologies and new strategies in the seed production industry. It provides in-depth information on burgeoning areas of seed science, including tissue culture and cellular totipotency induction and regeneration, protocols, development and maturation, hormone requirements, drying and storage of somatic embryos, protective encapsulation and crop applications. With an eye to the future, it looks at challenges in the provision and enhancement of seeds for crop plants, practical methods of seed production and micropropagation, genetically modified seeds and world food security.

The Encyclopedia of Seeds J. Derek Bewley, Michael Black, Peter Halmer, 2006 This is the first scholarly reference work to cover all the major scientific themes and facets of the subject of seeds. It outlines the latest fundamental biological knowledge about seeds together with the principles of agricultural seed processing, storage and sowing the food

and industrial uses of seeds and the roles of seeds in history economies and cultures With contributions from 110 expert authors worldwide the editors have created 560 authoritative articles illustrated with plentiful tables figures black and white and color photographs suggested further reading matter and 670 supplementary definitions The contents are alphabetically arranged and cross referenced to connect related entries
