This energy is released from the focus of the earthquake and travels outwards in all directions. The energy is carried by seismic waves, which are the vibrations that travel through the Earth.

What are seismic waves?

Seismic waves are the vibrations that travel through the Earth during an earthquake. They are the energy that is released from the focus of the earthquake and travels outwards in all directions. There are three main types of seismic waves: P-waves, S-waves, and surface waves. P-waves are the fastest and travel through the Earth's interior. S-waves are the second fastest and travel through the Earth's interior. Surface waves are the slowest and travel along the Earth's surface.
