daily practice *Clinical Atlas of Bone SPECT/CT* Tim Van den Wyngaert, Gopinath Gnanasegaran, Klaus Strobel, 2024-02-24
This clinical atlas is a comprehensive reference work on bone and joint disorders that can be characterized and assessed with hybrid bone SPECT CT. It is structured according to the major joints and regions of the skeletal system including spine, shoulder and elbow, hand and wrist, pelvis and hip, knee and foot and ankle. For each region, the annotated normal X-ray and cross-sectional anatomy is presented, followed by a general introduction to the most common pathologies and frequent surgical procedures. Optimal bone SPECT CT acquisition parameters are summarized, and pre and postoperative conditions are then discussed with the aid of informative clinical case vignettes featuring not only bone SPECT CT images but also correlative findings on other imaging modalities. For every case, teaching points highlighting need to know findings and common pitfalls are presented. The book concludes with two dedicated chapters covering bone SPECT CT imaging in sports injuries and oncology. Featuring many high quality illustrations, *Clinical Atlas of Bone SPECT CT* will be an invaluable resource for all nuclear medicine physicians. It is published as part of the SpringerReference program which delivers access to living editions constantly updated through a dynamic peer review publishing process. **Orthopaedics** Jeffrey Michael Spivak, 1999. A welcome alternative to the short reviews or large tomes currently on the market. Modeled after Tintinalli's Emergency Medicine Study Guide, this title uses short, concise chapters on a given subject to provide comprehensive coverage of the full range of orthopaedic disorders. The book will appeal to residents taking their licensing examinations as well as practitioners who require a review of a selected topic. **International Books in Print**, 1997 *Atlas of Gallium-67 Scintigraphy* Gerald Johnston, 2012-12-06. In 1970, under the sponsorship of Oak Ridge Associated Universities (ORAU), a group of clinical investigators formed the Cooperative Group to Study Localization of Radiopharmaceuticals. The first radiopharmaceutical selected for study was ⁶⁷Ga, administered as the citrate. The object of the study was to determine the usefulness of ⁶⁷Ga in the diagnosis and treatment of patients with various malignancies. Funding for the project was granted by the U.S. Atomic Energy Commission and the National Cancer Institute, National Institutes of Health, NIH. The Nuclear Medicine Department of the Clinical Center, NIH, agreed to assist ORAU with aspects of this study, particularly with ⁶⁷Ga scintigraphy of patients with lymphoma and Hodgkin's disease. Preliminary reports from the ORAU study are in press. Since April 1971, ⁶⁷Ga scintigraphy has gained increasing use in the study of cancer patients at the Clinical Center, NIH, where well over 1000 such patients have been examined by this method. This monograph was written to present selected examples from this group of a variety of malignancies seen in this 28-month period. No attempt has been made to correlate this overall experience statistically. Rather, this presentation is to help familiarize the practitioner of Nuclear Medicine with the wide range of usefulness for ⁶⁷Ga scintigraphy while making him aware of the variation in scan appearance and watchful of the many pitfalls of ⁶⁷Ga scan interpretation. Permission to use these patient studies and x-rays was generously granted by Dr. Paul P. Radionuclide and Hybrid Bone Imaging Ignac Fogelman, Gopinath
