Library Systems Branch, 1974 Haschek and Rousseaux's Handbook of Toxicologic Pathology Wanda M. Haschek, Colin G. Rousseaux, Matthew A. Wallig, Brad Bolon, Ricardo Ochoa, 2001-10-16 A comprehensive understanding of toxicologic pathology is essential for those in industry academia and government who make decisions concerning the safety and efficacy of drugs and chemicals Toxicologic pathology relies heavily on the fields of both toxicology and pathology which are well covered individually in various texts and references however there are few texts that address the field of toxicologic pathology The Handbook of Toxicologic Pathology fills this void and is thus essential for all health professionals within or interacting with the field of toxicologic pathology This two volume set provides the reader with a single reference for toxicologic pathology In volume I the book covers toxicologic pathology in its basic aspects including its definition the basic biochemical and morphologic mechanisms underlying the discipline the basic practice of toxicologic pathology including special techniques and issues essential to the understanding of toxicologic pathology such as risk assessment experimental design and statistical analysis Next the book moves to specific issues affecting the practice toxicologic pathology including issues such as knowledge management regulatory affairs and writing pathology reports Finally Volume I closes with several chapters that deal with specific classes of environmental toxicants such as endocrine disruptors and heavy metals Volume II addresses the toxicologic pathology in a thoroughly standardized systems manner addressing the basic structure and function of a particular organ system its response to toxic injury mechanisms of injury and methods of evaluation of such injury Key Features Easy to find up to date reference information Graphic and photographic plates Current hot topics and anticipated changes in toxicologic pathology Standardized chapter format Topics that are addressed in both a broad and deep manner resulting in a stand alone text Added coverage of important environmental toxicants Chapters authored by internationally recognized experts and peer reviewed **Hayes' Principles and Methods of Toxicology** A. Wallace Hayes, Claire L. Kruger, 2014-10-10 Hayes Principles and Methods of Toxicology has long been established as a reliable reference to the concepts methodologies and assessments integral to toxicology The new sixth edition has been revised and updated while maintaining the same high standards that have made this volume a benchmark

Histochemistry Richard W. Horobin, 2014-05-16 Histochemistry An Explanatory Outline of Histochemistry and Biophysical Staining describes the histochemical staining of cells and tissues as a major tool applied in biological and medical investigations both in basic research and in practical applications such as clinical diagnosis The book may be considered as a guide to understanding the scientific basis of staining procedures and alternate actions to take when common methods do not proceed as expected The first chapter gives general theoretical ideas from which most part of the book is largely organized around As the book considers the arts and crafts making up the practice of histochemistry and biological staining emphasis is given to the common physicochemical aspects of the technically diverse methodologies involved Hence the author has drawn ideas and information from physicochemically and biochemically related fields such as chromatography pharmacology photography tanning and textile dyeing The bulk of the book is structured around groups of practical procedures such as fixation staining with dyestuffs metal impregnation and selective extraction as a test of significance Lastly general essays on the usefulness of staining theories and on the problems arising from reagent impurities are given as examples The text is suitable for students and researchers in the fields of physiology biochemistry and pharmacology Clinical laboratory scientists and those involved in the life sciences and biotechnology will benefit from reading the book

Regulation of Hepatic Metabolism K. Jungermann, F.C. Kauffman, R.G. Thurman, 2012-12-06 The liver is an exceptionally complex and diverse organ that functions both as an exocrine and an endocrine gland. It secretes bile which contains many constituents in addition to bile salts and it synthesizes and releases many substances in response to the body's demands including prohormones, albumin, clotting factors, glucose, fatty acids, and various lipoproteins. It has a dual blood supply providing a rich mixture of nutrients and other absorbed substances via the portal vein and oxygen-rich blood via the hepatic artery. This functional heterogeneity is accompanied by cellular heterogeneity. The liver contains many cell types including hepatic parachymal cells, Kiipffer cells, Ito cells, and endothelial cells. The most abundant cell type, the parenchymal cells, are biochemically and structurally heterogeneous. The cells in the oxygen-rich areas of the portal triad appear more dependent on oxidative metabolism, whereas those around the central vein, pericentral, perivenous, or centrolobular areas are more dependent upon an anaerobic mechanism. Throughout this volume, the latter three terms are used synonymously by various authors to indicate the five to eight layers of cells radiating from the central vein. Structural and metabolic heterogeneity of hepatic parenchymal cells has been demonstrated by a variety of approaches including histochemical, ultrastructural, and ultramicrobiochemical studies. This microheterogeneity is linked to the physiological functions of the liver and its response to injurious substances.

Physiological Mechanisms Of Marine Pollutant Toxicity Winona Vernberg, 2012-12-02 *Physiological Mechanisms of Marine Pollutant Toxicity* contains the proceedings of a symposium on Pollution and Marine Organisms held at the University of South Carolina in Columbia, South Carolina, on November 30 to December 3, 1981. It explores the effects of pollutants such as petroleum hydrocarbons, heavy metals, and pesticides on the physiology of marine organisms along with the functional aspects of detoxification and the environmental health implications of pollution. Organized into three sections encompassing 24 chapters, this volume begins with a discussion of subcellular accumulation and detoxification of metals in aquatic animals such as fishes, crabs, and polychaetes. The reader is then introduced to the physiological mechanisms of pollutant toxicity, including the sublethal effects of pollutants on the gill morphology of the scallop *Placopecten magellanicus*, mechanisms underlying the tolerance of killifish embryos to heavy metals, increased sensitivity of smolts in seawater to petroleum hydrocarbons such as toluene and naphthalene, and physiological effects of sublethal concentrations of benzene and dimethylnaphthalene on blue crab juveniles. The book concludes by outlining research directions for linking cause and effect concerning pollution and marine organisms. This book will be a valuable resource for marine scientists, ecologists, and students.

Advances in Lipid Research Rodolfo Paoletti, David Kritchevsky, 2014-06-28 *Advances in Lipid Research* Volume 18 is a seven-chapter text that brings together significant research studies on atherosclerosis. The opening chapter describes the pathological techniques in atherosclerosis research.

The succeeding chapters deal with the influence of lipid lowering drugs on bile acid metabolism and the cholesterol metabolism in ovarian tissue Other chapters examine the principal role of sulfolipids and the influence of dietary linoleic acids on blood pressure regulation in rats The closing chapters review the influence of nonnutritive fiber on lipid metabolism and the influence of fiber on lipid associated diseases These chapters also consider the techniques for polar lipid analysis This book will be of great value to lipid chemists biochemists and researchers Operation Synapse William Croft, 2013-03-22 In 1980 Professor Robert Smyth a man who carries an unearthly secret is teaching pathology at the University of Wisconsin Madison His lecture makes clear to his students that the practice of treating the energy based human body with pharmaceuticals has proliferated within the last one hundred years and is now the leading cause of death in society What's more the use of pesticides has brought an additional load of poisons to the human and animal body Continual use of these chemicals has led to great insurance risk for the industry forcing them to cover up these problems and distract the public from their effects The insurance industry joins with bioterrorists who are masters in disease generation in order to manufacture and inflict a highly infectious artificial disease on society a biological weapon one that they are now capable of activating telepathically Humanity's only hope may be a couple who has traveled back in time to prevent this plague from destroying all human and animal life on the planet In this science fiction thriller only time will tell if a pathologist and his spiritual partner both travelers from the future can save humanity from a terrifying biological weapon
