Microorganism Research Chen Li,Yu-Dong Yao,Marcin Grzegorzek,2025-05-26 Infections caused by pathogenic microorganisms including bacteria viruses fungi and other eukaryotic microbes seriously threaten human health Traditional research methods and laboratory techniques have many limitations and focus more on the identification and classification of pathogenic microorganisms In recent years technologies such as whole genome sequencing and advanced bioinformatics analysis have promoted the research of pathogenic microorganisms However with the interplay of multiple factors like global climate change ecological and environmental changes urbanization social behavior and lifestyle changes pathogenic microorganisms transmission patterns and impact scope are gradually changing There is an urgent need for multidimensional technological approaches to achieve epidemiological monitoring and evolutionary direction prediction of pathogenic microorganisms Additionally more robust data processing and analysis capabilities are required for rapid identification and diagnosis monitoring of drug resistance development of antimicrobial drugs and vaccines and optimization of treatment plans Therefore Artificial Intelligence AI has entered our field of vision In the field of pathogenic microorganisms AI has shown tremendous potential In epidemiological research AI technology can quickly and automatically collect integrate and analyze the epidemic data of infectious diseases from different regions so as to predict the trend and scope of disease transmission and track the source of infection In the process of diagnosis and treatment of infectious diseases machine learning can not only analyze the microscopic images of pathogens but also analyze the genome sequences

of multiple pathogens in a short time and predict their sensitivity or resistance to specific antibiotics greatly improving the efficiency and accuracy of diagnosis and treatment of infectious diseases In drug or vaccine development researchers can use AI models to predict efficient antigens for diseases such as HIV and influenza and thus design more effective vaccine candidates AI models can also analyze the interactions between drugs pathogens and patients in order to design the optimal dosing regimen for each patient In a word AI can help human beings better deal with infectious diseases We welcome original reviews articles and other contributions in related fields which mainly include the following aspects

- 1 The application of AI in the differential diagnosis of pathogenic microorganisms
