rates common stock prices and Housing Development Board HDB resale flat prices Singapore's Main Upgrading Program MUP is a heavily subsidized and highly targeted. Since 1992 the HDB has budgeted some S\$3 billion to finance the MUP policy. A positive impact is the asset value enhancement of the HDB flats within the upgraded precincts. MUP subsidies vary significantly with the corresponding option premium. A 3 Room HDB flat owner is more inclined to opt for upgrading while the option premium is deemed to be less attractive for upgrading by the 4 Room HDB flat owner. Residents' satisfaction level with town council TC services are examined under different political parties. The concern is to ascertain a housing finance model which analyzes the affordability of household borrowers for purchasing resale public housing. With Central Provident funds CPF usage total interest paid over the loan life is significantly reduced. CPF as a financial buffer significantly reduces default risks for lender and household borrower.

American Book Publishing Record, 2005 **Introduction to Managerial Economics** Dr. Santanu Kumar Das, Local Activity Principle Klaus Mainzer, Leon O. Chua, 2013

The principle of local activity explains the emergence of complex patterns in a homogeneous medium. At first defined in the theory of nonlinear electronic circuits in a mathematically rigorous way it can be generalized and proven at least for the class of nonlinear reaction-diffusion systems in physics chemistry biology and brain research. Recently it was realized by memristors for nanoelectronic device applications. In general the emergence of complex patterns and structures is explained by symmetry breaking in homogeneous media which is caused by local activity. This book argues that the principle of local activity is really fundamental in science and can even be identified in quantum cosmology as symmetry breaking of local gauge symmetries generating the complexity of matter and forces in our universe. Applications are considered in economic financial and social systems with the emergence of equilibrium states symmetry breaking at critical points of phase transitions and risky acting at the edge of chaos.
