Astronomy on the Personal Computer Oliver Montenbruck, Thomas Pfleger, 2013-03-14 It is said that a typical astronomer of the 19th century spent seven hours working at a desk for every hour spent at the telescope That's how long the routine analysis of data took with pencil paper and logarithmic tables Thus when Wilhelm Olbers discovered the minor planet Vesta in 1807 and gathered the necessary observations his friend Gauss needed almost 10 hours to hand calculate its orbit That achievement astonished many less gifted astronomers of the time who might have labored days to work out the orbit of a newfound comet How different things are today Gauss's method of orbit determination presented in Chap 11 of this book runs to completion on a home computer in a few seconds at most The machine will issue its accurate results in less time than it takes to key in the observations In this book a landmark in the youthful literature of astronomical computer algorithms Oliver Montenbruck and Thomas Pfleger cover many topics of keen interest to the practical observer For me its most remarkable feature is the library of interrelated program modules all elegantly written in PASCAL Anyone who has tried to create such modules in interpreted BASIC soon runs into trouble too few letters for variable names not enough significant digits and so on These PASCAL routines are invoked one after another in coordinate transformations and calendar conversions

Shadows Martin Isler, 2001 What do the pyramids of Egypt really represent What could have driven so many to so great and often so dangerous an effort Was the motivation religious or practical Illustrated with more than 300 photographs and drawings this book presents an original approach to the subject of pyramid building It reveals the connection between devices that served both a practical need for survival and a spiritual belief in gods and goddesses It examines Egyptian technologies and techniques from the origins of pyramid development to the step by step details of how the ground was leveled how the site was oriented and how the stone was raised and placed to meet at a distant point in the sky Here the author also asks and answers questions virtually ignored for the last century He discloses for example the ancient use of shadows now denigrated to the ornamental back yard sundial but once an important tool for telling the height of an object geographical directions the seasons of the year and the time of day He also reinterprets the ancient stretching of the cord ceremony which once was thought to have only religious significance but here is shown as the means of establishing the sides of a pyramid
