Physical Science David Heywood,Joan Parker,2009-12-16 In the science classroom there are some ideas that are as difficult for young students to grasp as they are for teachers to explain Forces electricity light and basic astronomy are all examples of conceptual domains that come into this category How should a teacher teach them The authors of this monograph reject the traditional separation of subject and pedagogic knowledge They believe that to develop effective teaching for meaningful learning in science we must identify how teachers themselves interpret difficult ideas in science and in particular what supports their own learning in coming to a professional understanding of how to teach science concepts to young children To do so they analyzed trainee and practising teachers responses to engaging with difficult ideas when learning science in higher education settings The text demonstrates how professional insight emerges as teachers identify the elements that supported their understanding during their own learning In this paradigm professional awareness derives from the practitioner interrogating their own learning and identifying implications for their teaching of science The book draws on a significant body of critically analysed empirical evidence collated and documented over a five year period involving large numbers of trainee and practising teachers It concludes that it is essential to problematize subject knowledge both for learner and teacher The book s theoretical perspective draws on the field of cognitive psychology in learning In particular the role of metacognition and cognitive conflict in learning are examined and subsequently applied in a range of contexts The work offers a unique and refreshing approach in addressing the important professional dimension of supporting teacher understanding of pedagogy and critically examines assumptions in contemporary debates about constructivism in science education
