Shafarevich Maps And Automorphic Forms:

    Shafarevich Maps and Automorphic Forms János Kollár,2014-07-14 The aim of this book is to study various geometric properties and algebraic invariants of smooth projective varieties with infinite fundamental groups This approach allows for much interplay between methods of algebraic geometry complex analysis the theory of harmonic maps and topology Making systematic use of Shafarevich maps a concept previously introduced by the author this work isolates those varieties where the fundamental group influences global properties of the canonical class The book is primarily geared toward researchers and graduate students in algebraic geometry who are interested in the structure and classification theory of algebraic varieties There are however presentations of many other applications involving other topics as well such as Abelian varieties theta functions and automorphic forms on bounded domains The methods are drawn from diverse sources including Atiyah s L2 index theorem Gromov s theory of Poincar series and recent generalizations of Kodaira s vanishing theorem Originally published in 1995 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905   **Featured Reviews in "Mathematical Reviews" 1995-1996** Donald G. Babbitt,Jane E. Kister, This collection of reprinted Featured Reviews published in Mathematical Reviews MR in 1995 and 1996 makes widely available informed reviews of some of the best mathematics published recently Featured Reviews were introduced in MR at the beginning of 1995 in part to provide some guidance to the current research level literature With the exponential growth of publications in mathematical research in the first half century of MR it had become essentially impossible for users of MR to identify the most important new research level books and papers especially in fields outside of the users own expertise This work identifies some of the best new publications papers and books that are expected to have a significant impact on the area of pure or applied mathematics with which researchers are concerned All of the papers reviewed here contain interesting new ideas or applications a deep synthesis of existing ideas or any combination of these The volume is intended to lead the user to important new research across all fields covered by MR   **Several Complex Variables** Michael Schneider,Yum-Tong Siu,1999 Expository articles on Several Complex Variables and its interactions with PDEs algebraic geometry number theory and differential geometry first published in 2000   **Representations of Fundamental Groups of Algebraic Varieties** Kang Zuo,2006-11-14 Using harmonic maps non linear PDE and techniques from algebraic geometry this book enables the reader to study the relation between fundamental groups and algebraic geometry invariants of algebraic varieties The reader should have a basic knowledge of algebraic geometry and non linear analysis This book can form the basis for graduate level seminars in the area

of topology of algebraic varieties It also contains present new techniques for researchers working in this area **Algebraic Geometry Santa Cruz 1995** János Kollár,David R. Morrison,1997 *Mathematical Aspects of Quantization* Sam Evens,2012 This book is a collection of expository articles from the Center of Mathematics at Notre Dame s 2011 program on quantization Included are lecture notes from a summer school on quantization on topics such as the Cherednik algebra geometric quantization detailed proofs of Willwacher s results on the Kontsevich graph complex and group valued moment maps This book also includes expository articles on quantization and automorphic forms renormalization Berezin Toeplitz quantization in the complex setting and the commutation of quantization with reduction as well as an original article on derived Poisson brackets The primary goal of this volume is to make topics in quantization more accessible to graduate students and researchers *Lectures on Kähler Groups* Pierre Py,2025-03-25 An introduction to the state of the art in the study of K hler groups This book gives an authoritative and up to date introduction to the study of fundamental groups of compact K hler manifolds known as K hler groups Approaching the subject from the perspective of a geometric group theorist Pierre Py equips readers with the necessary background in both geometric group theory and K hler geometry covering topics such as the actions of K hler groups on spaces of nonpositive curvature the large scale geometry of infinite covering spaces of compact K hler manifolds and the topology of level sets of pluriharmonic functions Presenting the most important results from the past three decades the book provides graduate students and researchers with detailed original proofs of several central theorems including Gromov and Schoen s description of K hler group actions on trees the study of solvable quotients of K hler groups following the works of Arapura Beauville Campana Delzant and Nori and Napier and Ramachandran s work characterizing covering spaces of compact K hler manifolds having many ends It also describes without proof many of the recent breakthroughs in the field Lectures on K hler Groups also gives in eight appendixes detailed introductions to such topics as the study of ends of groups and spaces groups acting on trees and Hilbert spaces potential theory and L2 cohomology on Riemannian manifolds *Featured Reviews in Mathematical Reviews 1997-1999* Donald G. Babbitt,Jane E. Kister,2000-05-05 This second volume of Featured Reviews makes available special detailed reviews of some of the most important mathematical articles and books published from 1997 through 1999 Also included are excellent reviews of several classic books and articles published prior to 1970 Among those reviews for example are the following Homological Algebra by Henri Cartan and Samuel Eilenberg reviewed by G Hochschild Faisceaux algebriques coherents by Jean Pierre Serre reviewed by C Chevalley and On the Theory of General Partial Differential Operators by Lars Hormander reviewed by J L Lions In particular those seeking information on current developments outside their own area of expertise will find the volume very useful By identifying some of the best publications papers and books that have had or are expected to have a significant impact in applied and pure mathematics this volume will serve as a comprehensive guide to important new research across all fields covered by MR *Hodge Theory, Complex Geometry, and Representation Theory* Robert S.

Doran,Greg Friedman,Scott Nollet,2014 Contains carefully written expository and research articles Expository papers include discussions of Noether Lefschetz theory algebraicity of Hodge loci and the representation theory of SL2 R Research articles concern the Hodge conjecture Harish Chandra modules mirror symmetry Hodge representations of Q algebraic groups and compactifications distributions and quotients of period domains   Current Developments in Algebraic Geometry Lucia Caporaso,2012-03-19 This volume based on a workshop by the MSRI offers an overview of the state of the art in many areas of algebraic geometry   *Basic Algebraic Geometry 2* Igor R. Shafarevich,2012-11-27 The second volume of Shafarevich s introductory book on algebraic varieties and complex manifolds As with Volume 1 the author has revised the text and added new material e g as a section on real algebraic curves Although the material is more advanced than in Volume 1 the algebraic apparatus is kept to a minimum making the book accessible to non specialists It can be read independently of Volume 1 and is suitable for beginning graduate students in mathematics as well as those in theoretical physics   **Basic Algebraic Geometry 1** Igor R. Shafarevich,2013-11-27 The first edition of this book came out just as the apparatus of algebraic geometry was reaching a stage that permitted a lucid and concise account of the foundations of the subject The author was no longer forced into the painful choice between sacrificing rigour of exposition or overloading the clear geometrical picture with cumbersome algebraic apparatus The 15 years that have elapsed since the first edition have seen the appear ance of many beautiful books treating various branches of algebraic geometry However as far as I know no other author has been attracted to the aim which this book set itself to give an overall view of the many varied aspects of algebraic geometry without going too far afield into the different theories There is thus scope for a second edition In preparing this I have included some additional material rather varied in nature and have made some small cuts but the general character of the book remains unchanged   **Groups St Andrews 1997 in Bath** C. M. Campbell,E. F. Robertson,N. Ruskuc,G. C. Smith,1999   **Infinite Groups: Geometric, Combinatorial and Dynamical Aspects** Laurent Bartholdi,Tullio Ceccherini-Silberstein,Tatiana Smirnova-Nagnibeda,Andrzej Zuk,2006-03-28 This book offers a panorama of recent advances in the theory of infinite groups It contains survey papers contributed by leading specialists in group theory and other areas of mathematics Topics include amenable groups Kaehler groups automorphism groups of rooted trees rigidity C algebras random walks on groups pro p groups Burnside groups parafree groups and Fuchsian groups The accent is put on strong connections between group theory and other areas of mathematics   **Singularities of the Minimal Model Program** János Kollár,Sándor Kovács,2013-02-21 An authoritative reference and the first comprehensive treatment of the singularities of the minimal model program   Positivity in Algebraic Geometry I R.K. Lazarsfeld,2004-08-24 This two volume work on Positivity in Algebraic Geometry contains a contemporary account of a body of work in complex algebraic geometry loosely centered around the theme of positivity Topics in Volume I include ample line bundles and linear series on a projective variety the classical theorems of Lefschetz and Bertini and their modern outgrowths vanishing theorems and local positivity

Volume II begins with a survey of positivity for vector bundles and moves on to a systematic development of the theory of multiplier ideals and their applications A good deal of this material has not previously appeared in book form and substantial parts are worked out here in detail for the first time At least a third of the book is devoted to concrete examples applications and pointers to further developments Volume I is more elementary than Volume II and for the most part it can be read without access to Volume II **Fundamental Groups of Compact Kahler Manifolds** Jaume Amorós,1996 This book is an exposition of what is currently known about the fundamental groups of compact K hler manifolds This class of groups contains all finite groups and is strictly smaller than the class of all finitely presentable groups For the first time ever this book collects together all the results obtained in the last few years which aim to characterize those infinite groups which can arise as fundamental groups of compact K hler manifolds Most of these results are negative ones saying which groups don not arise The methods and techniques used form an attractive mix of topology differential and algebraic geometry and complex analysis The book would be useful to researchers and graduate students interested in any of these areas and it could be used as a textbook for an advanced graduate course One of its outstanding features is a large number of concrete examples The book contains a number of new results and examples which have not appeared elsewhere as well as discussions of some important open questions in the field **Positivity in algebraic geometry 2** R.K. Lazarsfeld,2004-08-24 This two volume work on Positivity in Algebraic Geometry contains a contemporary account of a body of work in complex algebraic geometry loosely centered around the theme of positivity Topics in Volume I include ample line bundles and linear series on a projective variety the classical theorems of Lefschetz and Bertini and their modern outgrowths vanishing theorems and local positivity Volume II begins with a survey of positivity for vector bundles and moves on to a systematic development of the theory of multiplier ideals and their applications A good deal of this material has not previously appeared in book form and substantial parts are worked out here in detail for the first time At least a third of the book is devoted to concrete examples applications and pointers to further developments Whereas Volume I is more elementary the present Volume II is more at the research level and somewhat more specialized Both volumes are also available as hardcover edition as Vols 48 and 49 in the series Ergebnisse der Mathematik und ihrer Grenzgebiete

Foliation Theory in Algebraic Geometry Paolo Cascini,James McKernan,Jorge Vitório Pereira,2016-03-30 Featuring a blend of original research papers and comprehensive surveys from an international team of leading researchers in the thriving fields of foliation theory holomorphic foliations and birational geometry this book presents the proceedings of the conference Foliation Theory in Algebraic Geometry hosted by the Simons Foundation in New York City in September 2013 Topics covered include Fano and del Pezzo foliations the cone theorem and rank one foliations the structure of symmetric differentials on a smooth complex surface and a local structure theorem for closed symmetric differentials of rank two an overview of lifting symmetric differentials from varieties with canonical singularities and the applications to the classification

of AT bundles on singular varieties an overview of the powerful theory of the variety of minimal rational tangents introduced by Hwang and Mok recent examples of varieties which are hyperbolic and yet the Green Griffiths locus is the whole of X and a classification of psuedoeffective codimension one distributions Foliations play a fundamental role in algebraic geometry for example in the proof of abundance for threefolds and to a solution of the Green Griffiths conjecture for surfaces of general type with positive Segre class The purpose of this volume is to foster communication and enable interactions between experts who work on holomorphic foliations and birational geometry and to bring together leading researchers to demonstrate the powerful connection of ideas methods and goals shared by these two areas of study div **Proceedings of the Symposium on Algebraic Geometry in East Asia** Akira Ohbuchi,2002 This book is the proceedings of the conference OC Algebraic Geometry in East AsiaOCO which was held in International Institute for Advanced Studies IIAS during August 3 to August 10 2001 As the breadth of the topics covered in this proceedings demonstrate the conference was indeed successful in assembling a wide spectrum of East Asian mathematicians and gave them a welcome chance to discuss current state of algebraic geometry
