Machine Translation And Translation Theory:

Machine Translation and Translation Theory Christa Hauenschild, Susanne Heizmann, 2011-08-02 The series serves to propagate investigations into language usage especially with respect to computational support This includes all forms of text handling activity not only interlingual translations but also conversions carried out in response to different communicative tasks Among the major topics are problems of text transfer and the interplay between human and machine activities

Machine Translation and Translation Theory Omri Asscher, 2025-07-17 Pervasive and ubiquitous machine translation systems have been transforming communication and understanding across languages and cultures on a historical scale Focused on both Neural Machine Translation tools such as Google Translate and generative AI tools such as ChatGPT Omri Asscher pursues the juncture between machine translation and the diverse often competing frameworks of human translation theory He shines a light on the subtleties of the intersection between the two the places where machine translation corresponds well with the ideas that have been developed on human translation throughout the years and the places where machine translation seems to challenge translation theory and perhaps even require that we rethink some of its basic assumptions Machine Translation and Translation Theory reflects the need for an accessible panoramic view on the subject It offers a detailed discussion of various points of theoretical interest definitions of translation equivalence in translation aesthetics of translation translation ethics translation as cross cultural communication and translation s historical agency This is key reading for researchers and students in translation studies as well as scholars of AI mediated communication and computer scientists interested in how machine translation architectures correspond with the understanding of translation in the humanities

The Possibility of Language Alan K. Melby, Terry Warner, 1995-12-08 This book is about the limits of machine translation It is widely recognized that machine translation systems do much better on domain specific controlled language texts domain texts for short than on dynamic general language texts general texts for short The authors explore this general domain distinction and come to some uncommon conclusions about the nature of language Domain language is claimed to be made possible by general language while general language is claimed to be made possible by the ethical dimensions of relationships Domain language is unharmed by the constraints of objectivism while general language is suffocated by those constraints Along the way to these conclusions visits are made to Descartes and Saussure to Chomsky and Lakoff to Wittgenstein and Levinas From these conclusions consequences are drawn for machine translation and translator tools for linguistic theory and translation theory The title of the book does not question whether language is possible it asks with wonder and awe why communication through language is possible

Translation and Practice Theory Maeve Olohan, 2020-10-13 Translation and Practice Theory is a timely and theoretically innovative study linking professional practice and translation theory showing the usefulness of a practice theoretical approach in addressing some of the challenges that the professional world of translation is currently facing including for example the increasing

deployment of machine translation Focusing on the key aspects of translation practices Olohan provides the reader with an in depth understanding of how those practices are performed as translators interact with people technologies and other material resources in the translation workplace The practice theoretical perspective helps to describe and explain the socio material complexities of present day commercial translation practice but also offers a productive approach for studies of translation and interpreting practices in other settings and periods This first book length exploration of translation through the lens of practice theory is key reading for advanced students and researchers of Translation Theory It will also be of interest in the area of professional communication within Communication Studies and Applied Linguistics **Translation**

Marianne Lederer,2014-04-08 This book the English version of La traduction aujourd'hui Hachette 1994 describes the interpretive theory of translation developed at the Paris Ecole Supérieure d'Interprètes et de Traducteurs ESIT over the last 35 years The theory identifies the mental and cognitive processes involved in both oral and written translation understanding the text deverbalizing its language re-expressing sense For the purposes of translation languages are a means of transmitting sense they are not to be translated as such Although translation involves the use of correspondences translators generally set up equivalence between text segments The synecdochic nature of both languages and texts a phenomenon discussed in the book explains why translation is possible across language differences The many practical problems faced by translators the difference between translation exercises used as a language teaching tool and professional translation translating into a foreign language and machine translation as compared to human translation are also discussed **Computers and**

Translation H. L. Somers,2003-01-01 Designed for translators and other professional linguists this work attempts to clarify explain and exemplify the impact that computers have had and are having on their profession The book concerns machine translation computer aided translation and the future of translation and the computer Crossroads between Contrastive Linguistics, Translation Studies and Machine Translation Oliver Czulo,Silvia Hansen-Schirra,2017 Contrastive Linguistics CL Translation Studies TS and Machine Translation MT have common grounds They all work at the crossroad where two or more languages meet Despite their inherent relatedness methodological exchange between the three disciplines is rare This special issue touches upon areas where the three fields converge It results directly from a workshop at the 2011 German Association for Language Technology and Computational Linguistics GSCL conference in Hamburg where researchers from the three fields presented and discussed their interdisciplinary work While the studies contained in this volume draw from a wide variety of objectives and methods and various areas of overlaps between CL TS and MT are addressed the volume is by no means exhaustive with regard to this topic Further cross fertilisation is not only desirable but almost mandatory in order to tackle future tasks and endeavours *Translation and Information Technology* Sin-wai Chan,2002 Information technology has created new challenges for translation In this text contributors in computational linguistics machine translation and translation studies discuss the effect of electronic tools on translation and the conceptual gaps raised by the interface of

human and machine **Repairing Texts** Hans P. Krings, 2001 This study challenges the idea that given the effectiveness of machine translation major costs could be reduced by using monolingual staff to post edit translations It presents studies of machine translation systems and current research into translation process **Translation and Technology** Chiew Kin Quah, 2006-04-12 Chiew Kin Quah draws on years of academic and professional experience to provide an account of translation technology its applications and capabilities Major developments from North America Europe and Asia are described including developments in uses and users of the technology
