Molecular Gerontology Research Status And Strategies:

Molecular Gerontology S.I. Rattan, Olivier Toussaint, 2012-12-06 Esteemed researchers from different European laboratories provide state of the art studies on biology and ageing along with guidelines for future investigations They cover such issues in molecular gerontological research as regulation of gene expression from DNA to RNA to functional proteins origin of various age associated diseases genetic regulation of ageing and longevity and different mechanisms of defense and repair Other contributions evaluate new technologies including transgenic organisms and the use of nutritional and chemical modulators of ageing and lifespan

Challenges of Biological Aging Edward J. Masoro, 2000-09-05 This volume provides the non biologist an overview of what is known about the physiological bases of aging The author examines the many basic theories and emerging hypotheses underlying the molecular cellular and systemic processes involved in senescence He addresses the normal physiological changes that characterize the aging phenotype and also considers the role of many age associated diseases in growing older Masoro synthesizes a much needed unified theory of biological aging to which explains how and why the body grows into the condition we call old This text is intended for gerontology students in training as well as for human physiologists interested in gerontology

Modulating Aging and Longevity S.I. Rattan, 2003-09-30 After decades of systematic collection of data describing age related changes in organisms organs tissues cells and macromolecules biogerontologists are now in a position to construct general principles of ageing and explore various possibilities of intervention using rational approaches While not giving serious consideration to the claims made by charlatans it cannot be ignored that several researchers are making genuine attempts to test and develop various means of intervention for the prevention and treatment of age related diseases for regaining the functional abilities and for prolonging the lifespan of experimental organisms This book provides the most up to date information and a critical evaluation of a variety of approaches being tried for modulating aging and longevity including dietary supplementation with antioxidants vitamins and hormones genetic engineering life style alterations and hormesis through mild stress The goal of research on ageing is not to increase human longevity regardless of the consequences but to increase active longevity free from disability and functional dependence

Model Systems in Aging Thomas Nyström, Heinz D. Osiewacz, 2004 Aging is the progressive decline in biological functions over time This decline targets macromolecules cells tissues and as a consequence whole organisms Despite considerable progress in the development of testable hypothesis concerning aging in an evolutionary context a unifying theory of the molecular physiological mechanistic causes of aging has not been reached In fact is it not clear to what extent aging is a programmed or stochastic process This book takes the reader from unicellular bacterial deterioration via senescence in fungi and worms to aging in rodents and humans allowing a comparative view on similarities and differences in different genetic model systems The different model systems are scrutinized in the light of contemporary aging hypothesis such as the free radical and genomic instability theories

Aging of Cells in and Outside the Body S.

Kaul,Renu Wadwha,2013-03-14 This book provides updated knowledge on the basic features and mechanisms of cellular aging established since its first manifestation at cellular level 40 years ago Contributions of genetic and environmental factors failure of genetic and cellular repair mechanisms and the epigenetic modifications determine the final lifespan of cells This book also provides an understanding on how aging mechanisms in mice a most frequently used model differ with that of humans who receive better tumor surveillance because of stringent controls on aging mechanisms It also appraises the use of modern technology for aging studies and its intervention This book serves as an excellent reading on cellular aging for undergraduate students researchers and experts of this area Reproductive Ageing Susan Bewley,William Ledger,Dimitrios Nikolaou,2009-06 This book is based on the RCOG Study Group findings on reproductive ageing Proceedings Indian National Science Academy,2003 *Manual of Gerontologic Nursing* Charlotte Eliopoulos,1999 A practical accessible reference now brought completely up to date This bestselling manual covers all problems related to gerontologic nursing care within the nursing diagnosis framework **Proceedings of the Indian National Science Academy** Indian National Science Academy,1970 **The British National Bibliography** Arthur James Wells,1998
