Natural Man The Life Of William Beebe:

Natural Man Robert Henry Welker, 1975 The Remarkable Life of William Beebe Carol Grant Gould, 2012-09-26 When William Beebe needed to know what was going on in the depths of the ocean he had himself lowered a half mile down in a four foot steel sphere to see five times deeper than anyone had ever gone in the 1930s When he wanted to trace the evolution of pheasants in 1910 he trekked on foot through the mountains and jungles of the Far East to locate every species To decipher the complex ecology of the tropics he studied the interactions of every creature and plant in a small area from the top down setting the emerging field of tropical ecology into dynamic motion William Beebe's curiosity about the natural world was insatiable and he did nothing by halves As the first biographer to see the letters and private journals Beebe kept from 1887 until his death in 1962 science writer Carol Grant Gould brings the life and times of this groundbreaking scientist and explorer compellingly to light From the Galapagos Islands to the jungles of British Guiana from the Bronx Zoo to the deep seas Beebe's biography is a riveting adventure A best selling author in his own time Beebe was a fearless explorer and thoughtful scientist who put his life on the line in pursuit of knowledge The unique glimpses he provided into the complex web of interactions that keeps the earth alive and breathing have inspired generations of conservationists and ecologists This exciting biography of a great naturalist brings William Beebe at last to the recognition he deserves *The Maximum of Wilderness* Kelly Enright, 2012 Locating a new wilderness nature and conservation at the start of the twentieth century Tame adventures and wild homes encountering the jungle with Martin and Osa Johnson Discovering jungle peace the prolonged observations of William Beebe Ingesting the jungle the botanical experiences of David Fairchild and Richard Evans Schultes

Nature's Ghosts Mark V. Barrow, 2011-04-15 The rapid growth of the American environmental movement in recent decades obscures the fact that long before the first Earth Day and the passage of the Endangered Species Act naturalists and concerned citizens recognized and worried about the problem of human caused extinction As Mark V Barrow reveals in *Nature's Ghosts* the threat of species loss has haunted Americans since the early days of the republic From Thomas Jefferson's day when the fossil remains of such fantastic lost animals as the mastodon and the woolly mammoth were first reconstructed through the pioneering conservation efforts of early naturalists like John James Audubon and John Muir Barrow shows how Americans came to understand that it was not only possible for entire species to die out but that humans themselves could be responsible for their extinction With the destruction of the passenger pigeon and the precipitous decline of the bison professional scientists and wildlife enthusiasts alike began to understand that even very common species were not safe from the juggernaut of modern industrial society That realization spawned public education and legislative campaigns that laid the foundation for the modern environmental movement and the preservation of such iconic creatures as the bald eagle the California condor and the whooping crane A sweeping beautifully illustrated historical narrative that unites the fascinating stories of endangered animals and the dedicated individuals who have studied and struggled to protect

them Nature's Ghosts offers an unprecedented view of what we've lost and a stark reminder of the hard work of preservation still ahead

The Mysterious Science of the Sea, 1775-1943 Natascha Adamowsky, 2015-10-06 The depths of the oceans are the last example of terra incognita on earth Adamowsky presents a study of the sea arguing that contrary to popular belief post Enlightenment discourse on the sea was still subject to mystery and wonder and not wholly rationalized by science
