Chambers, Ayisha Farooq, 1999-05-26 An examination of the factors that influence economic growth and sustainable development in countries with a significant natural resource sector. It looks at how to make the primary sector sufficiently productive to provide for investment in both itself and other sectors of the economy. **Encyclopedia of Energy, Natural Resource, and Environmental Economics**, 2013-03-29 Every decision about energy involves its price and cost. Understanding and Interpreting Economic Structure

Geoffrey J.D. Hewings, Michael Sonis, Moss Madden, Yoshio Kimura, 2013-06-29 In 1976 volume 116 of the Lecture Notes in Economics and Mathematical Systems appeared in the library of the University of Illinois The title of the book Input Output Analysis and the Structure of Income Distribution was sufficiently intriguing to one of the present editors Hewings to command attention Some years later during the First World Congress of the Regional Science Association in Cambridge Massachusetts in 1980 Madden and Batey presented some of their work using their now familiar demographic economic modeling system Discussion ensued about the relationship between this system Miyazawa's formulation and the social accounting matrices most closely associated with the work of Stone During a year's residence at the University of Illinois

Batey was able to produce a valuable typology of multipliers that began the process of integrating these several modeling systems into a coherent package. Thereafter a number of regional scientists have exploited the ideas and insights proposed by Miyazawa especially the notion of the interrelational income multiplier and the ideas of internal and external multipliers.

Natural Resource Policymaking in Developing Countries William Ascher, Robert G. Healy, 1990. Drawing on case studies developed over a two year period 1987-1989 by Fellows in the Program in International Development Policy at Duke University including experienced representatives from developing countries, the World Bank and scholars, the authors integrate the growing interest in environmental protection and resource conservation into the existing body of knowledge about the political economy of developing countries. This book is about the links that tie resource use, environmental quality and economic development and the way in which those links are affected by the distribution of income and resource ownership. The links may be relatively simple as in the case of peasant farmers too poor to conserve resources for the future and with nothing to gain from sound environmental practices. Or they may be very complex as the authors find when they demonstrate how achievement of higher incomes by the rich can increase environmentally destructive behavior by the poor. Many of the links in some way involve rural land use whether for agriculture or forestry. *Natural Resource Policymaking in Developing Countries* argues that the policies that matter are not merely those dealing with resources and the environment but a much broader set that includes income distribution and asset ownership. *Seventh Symposium on Systems Analysis*

in Forest Resources, Traverse City, Michigan, USA, May 28-31, 1997, 2000. **Natural Resources and the Environment** Mark Kanazawa, 2021-05-18. *Natural Resources and the Environment: Economics, Law, Politics and Institutions* provides a new approach to the study of environmental and natural resource economics. It augments current contributions from the fields of public choice, law and economics and the burgeoning field of what used to be called the New Institutional Economics to describe, explain and interpret how these new developments have been applied to better understand the economics of natural resources and the environment. This textbook takes a multi-disciplinary approach which is essential for understanding complex environmental problems and examines the issue from not only an economic perspective but also taking into account law, politics and institutions. In doing so it provides students with a realistic understanding of how environmental policy is created and presents a comprehensive examination of real world environmental policy. The book provides a comprehensive coverage of key issues including renewable energy, climate change, agriculture, water resources, land conservation and fisheries with each chapter accompanied by learning resources such as recommended further reading, discussion questions and exercises. This textbook is essential reading for students and scholars seeking to build an interdisciplinary understanding of natural resources and the environment. *Natural Capital* Peter Kareiva, 2011-04-07. In 2005 The Millennium Ecosystem Assessment (MA) provided the first global assessment of the world's ecosystems and ecosystem services. It concluded that recent trends in ecosystem change threatened human wellbeing due to declining ecosystem services. This bleak prophecy has

galvanized conservation organizations ecologists and economists to work toward rigorous valuations of ecosystem services at a spatial scale and with a resolution that can inform public policy The editors have assembled the world s leading scientists in the fields of conservation policy analysis and resource economics to provide the most intensive and best technical analyses of ecosystem services to date A key idea that guides the science is that the modelling and valuation approaches being developed should use data that are readily available around the world In addition the book documents a toolbox of ecosystem service mapping modeling and valuation models that both The Nature Conservancy and the World Wide Fund for Nature WWF are beginning to apply around the world as they transform conservation from a biodiversity only to a people and ecosystem services agenda The book addresses land freshwater and marine systems at a variety of spatial scales and includes discussion of how to treat both climate change and cultural values when examining tradeoffs among ecosystem services *Sustainable Economic Development* Mohamed Sami Ben Ali,Ewa Lechman,2024-06-27 This book provides readers with a comprehensive understanding of the general framework of sustainable development paths in relation to where countries stand at present by outlining the main challenges they face and the potential pathways ahead to foster the Sustainable Development Goals SDGs In connecting different SDG s the collection of chapters teases out the multifarious relationships and influences on policy balancing economic social and environmental dimensions for development making qualitative distinctions between high income and low income countries in the SDGs context In doing so the book emphasizes that with the rapid upliftment from extreme poverty and subsistence globally growing economic and social gaps have expanded with unprecedented speed Widening divides in material wealth are shown to some extent as a side effect of fast economic growth and development This book draws out these connections between economic progress expressed through shifts on per capita income and the achievements and setbacks to meeting each of the SDGs respectively Beyond its place in social scientific discourse relevant to scholars researching the various aspects of sustainable economic development this book s findings also have important implications for policymakers development specialists and economists in both developed and developing countries

High-Value Natural Resources and Post-Conflict Peacebuilding Pivi Lujala,2012-03-29 For most post conflict countries the transition to peace is daunting In countries with high value natural resources including oil gas diamonds other minerals and timber the stakes are unusually high and peacebuilding is especially challenging Resource rich post conflict countries face both unique problems and opportunities They enter peacebuilding with an advantage that distinguishes them from other war torn societies access to natural resources that can yield substantial revenues for alleviating poverty compensating victims creating jobs and rebuilding the country and the economy Evidence shows however that this opportunity is often wasted Resource rich countries do not have a better record in sustaining peace In fact resource related conflicts are more likely to relapse Focusing on the relationship between high value natural resources and peacebuilding in post conflict settings this book identifies opportunities and strategies for converting resource revenues to a peaceful future

Its thirty chapters draw on the experiences of forty one researchers and practitioners as well as the broader literature and cover a range of key issues including resource extraction revenue sharing and allocation and institution building The book provides a concise theoretical and practical framework that policy makers researchers practitioners and students can use to understand and address the complex interplay between the management of high value resources and peace High Value Natural Resources and Post Conflict Peacebuilding is part of a global initiative led by the Environmental Law Institute ELI the United Nations Environment Programme UNEP the University of Tokyo and McGill University to identify and analyze lessons in natural resource management and post conflict peacebuilding The project has generated six edited books of case studies and analyses with contributions from practitioners policy makers and researchers Other books in the series address land water livelihoods assessing and restoring natural resources and governance Natural and Energy Resources Eston T. White,1979 *Energy Abstracts for Policy Analysis* ,1978 *Seventh Symposium on Systems Analysis in Forest Resources* ,2000 **Governance, Conflict, and Natural Resources in Africa** Hany Gamil Besada,2021-04-22 A country s abundant natural resources may serve as a curse or a blessing with the outcome often dependent on prevailing governance structures and experience managing these assets Despite natural resource advantages many African countries have failed to transform their enormous economic potential and wealth into tangible benefits such as sustainable socio economic development human security or peace Governance Conflict and Natural Resources in Africa reevaluates the role that foreign state owned and private sector actors play in resource rich states whether stable post conflict or fragile in sub Saharan Africa Through research and an analysis of in depth interviews with local stakeholders in Ghana Sierra Leone and Ethiopia Hany Besada explains how foreign state owned and private sector corporations have contributed to economic growth at both the national and local levels in different resource rich countries This book reveals the unique challenges and opportunities created by these investors demonstrating that new policies in business practices and operations have the potential to generate sustainable development and positive economic transformation Governance Conflict and Natural Resources in Africa puts forward a novel framework for understanding the role of private economic actors in extractive industries in Africa and sheds new light on foreign private sector contributions to capacity building and economic development
