## **Natural Selection In The Wild:**

Natural Selection in the Wild John A. Endler, 1986-04-21 Natural selection is an immense and important subject yet there have been few attempts to summarize its effects on natural populations and fewer still which discuss the problems of working with natural selection in the wild These are the purposes of John Endler's book In it he discusses the methods and problems involved in the demonstration and measurement of natural selection presents the critical evidence for its existence and places it in an evolutionary perspective Professor Endler finds that there are a remarkable number of direct demonstrations of selection in a wide variety of animals and plants The distribution of observed magnitudes of selection in natural populations is surprisingly broad and it overlaps extensively the range of values found in artificial selection He argues that the common assumption that selection is usually weak in natural populations is no longer tenable but that natural selection is only one component of the process of evolution natural selection can explain the change of frequencies of variants but not their origins

*Natural Selection and Tropical Nature* Alfred Russel Wallace, 1895

*The Mystery of Evolutionary Mechanisms* Robert F. Shedinger, 2019-06-28 Is Darwinian evolution really the most successful scientific theory ever proposed or even the best idea anyone has ever had as Daniel Dennett once put it The Mystery of Evolutionary Mechanisms provides a comprehensive critical reading of the literature of evolutionary biology from Darwin to Dobzhansky to Dawkins revealing this popular account of evolution to be a grand narrative of Darwinian triumph that greatly overstates the empirical validity of modern evolutionary theory The mechanisms driving the evolutionary process truly remain a mystery more than one hundred fifty years after Origin of Species a fact that can free religion scholars to think in more creative ways about the positive contributions religious reflection might make to our understanding of life's origin and diversity The Mystery of Evolutionary Mechanisms calls for an embrace of mystery understood not as an abdication of the scientific quest for truth but as a courageous and humble acknowledgment of the limits of human reason and an openness to a fundamentally religious orientation toward life

Nature's Holism Laurence Evans, 1999-08 In the association of the bee and the flower is a very advanced reflection of the process of evolution through natural selection Nature's Holism explores the coevolution of long associated species arriving at a holistic view of nature where the compatibility between species is significant In nature there are two interacting forces There is the numerical increase in numbers of a species termed a force of perpetuity Increasing numbers of a single species have an inevitable impact on the environment However as each species survives within an ecological context there is a feedback from the ecosystem as numbers increase requiring a necessary compatibility with the ecosystem Fitness is therefore defined not only by quantitative representation of genes in the next generation perpetuity but also the qualitative condition of compatibility with the habitat or ecosystem that provided the conditions and resources for this success

**Evolution of Wild Emmer and Wheat Improvement** E. Nevo, A.B. Korol, A. Beiles, T. Fahima, 2013-06-29 This book is about the contribution to evolutionary theory and agricultural technology of one of humankind's most dramatic

imitations of the evolutionary process namely crop domestication as exemplified by the progenitor of wheat *Triticum dicoccoides*. This species is a major model organism and it has been studied at the Institute of Evolution University of Haifa since 1979. The domestication by humans of wild plants to cultivated ones during the last ten millennia is one of the best demonstrations of evolution. It is a process that has been condensed in time and advanced by artificial rather than natural selection. Plant and animal domestication revolutionized human cultural evolution and is the major factor underlying human civilization. A post-Pleistocene global rise in temperature following the ice age, i.e. climatic environmental factors may have induced the expansion of economically important thermophilous plants and in turn promoted complex foraging and plant cultivation. The shift from foraging to steady production led to an incipient agriculture varying in time in various parts of the world. In the Levant, agriculture developed out of an intensive specialized exploitation of plants and animals. Natufian sedentism followed by rapid population growth and resource stress induced by the expanding desert coupled with available grinding technology may have triggered plant domestication.

#### **Adaptive Genetic Variation in the Wild** Timothy A.

Mousseau, Barry Sinervo, John A. Endler, 2000-01-13. Two of the great mysteries of biology yet to be explored concern the distribution and abundance of genetic variation in natural populations and the genetic architecture of complex traits. These are tied together by their relationship to natural selection and evolutionary history and some of the keys to disclosing these secrets lie in the study of wild organisms in their natural environments. This book featuring a superb selection of papers from leading authors summarizes the state of current understanding about the extent of genetic variation within wild populations and the ways to monitor such variation. It proposes the idea that a fundamental objective of evolutionary ecology is necessary to predict organism population community and ecosystem response to environmental change. In fact the overall theme of the papers centers around the expression of genetic variation and how it is shaped by the action of natural selection in the natural environment. Patterns of adaptation in the past and the genetic basis of traits likely to be under selection in a dynamically changing environment is discussed along with a wide variety of techniques to test for genetic variation and its consequences ranging from classical demography to the use of molecular markers. This book is perfect for professionals and graduate students in genetics, biology, ecology, conservation biology and evolution.

Sex, Gender, Ethics and the Darwinian Evolution of Mankind Michel Veuille, 2024-06-28. Sex, Gender, Ethics and the Darwinian Evolution of Mankind examines the impact of Darwin's *Descent of Man* on contemporary biology and the humanities. Its publication in 1871 was a founding event in anthropology. Its content was primarily concerned with the development of sexual life, social life and intellectual life, not only as outcomes of evolution but as components that have actively intermixed over time with the evolutionary mechanism of natural selection. The stamp of Darwinism on modern thought is still very important and brings novelties to academic studies. Several fields influenced by Darwinian anthropology developed in recent decades including evolutionary ethics, the evolution of sociality and sexual communication in animal and plant species. Sociobiology and evolutionary psychology are topics that

draw heavily on Darwin's *Descent of Man*. The understanding of Darwin's thought has also progressed greatly in recent decades following the systematic study of Darwin's correspondence and notebooks leading to a reassessment of the development of his thought on humans, social groups and heredity and how they come together in his theory of evolution. The book combines a historical perspective on Darwin's achievement and his legacy. It will be of interest to students and scholars in a variety of fields from experimental biology to the social and historical sciences.

### **Feminism in the Wild** Ambika

Kamath, Melina Packer, 2025-09-02 How dominant culture from sexism and homophobia to racism, capitalism, ableism and more has limited the science of animal behavior and how we can free ourselves from these limited perspectives. In *Feminism in the Wild*, Ambika Kamath and Melina Packer reveal how scientists studying animal behavior have long projected human norms and values onto animals while seeking to understand them. When scientific studies conclude that these norms and values are natural in animals, it makes it easier to think of them as natural in humans too. And because scientists historically and to this day largely belong to elite, powerful segments of society, the norms and values embedded in animal behavior science match those of the already powerful. How can animal behavior science escape this trap of naturalizing dominant culture? Drawing from decades of feminist, antiracist, queer, disability justice and Marxist contributions, including those of biologists, Kamath and Packer break down persistent assumptions in the status quo of animal behavior science and offer a multitude of alternative approaches. Core concepts in animal behavior science and evolutionary biology from sex categories and sexual selection to fitness, adaptation, biological determinism and more are carefully contextualized and critically reexamined. This unique collaboration between an animal behavior scientist and a feminist science studies scholar is an illuminating and hopeful read for anyone who is curious about how animals behave and anyone who wants to break free from scientific approaches that perpetuate systems of oppression.

### Ending the War Between Humanity and Nature Patrick C.

Lee, 2020-08-19 This book offers plausible explanations for people's puzzling unwillingness to address the human-nature interactions that have led us to the precipice: that is, climate change today. Humanity and nature are at war; the evidence is all around us: catastrophic weather events, rising sea levels, extinction of species, famine, wildfires, melting polar ice, millions of environmental refugees and toxic pollution of air, water and soil. The list goes on and on. What is causing this war and how can it be stopped? Is this war an unintended consequence of economic and environmental imperatives pulling in opposite directions? This book takes the question and its answer to a deeper level. It argues that the root cause of our war on nature might be found in the time-honored, historically deep myths, narratives and stories we tell ourselves and have been telling ourselves for centuries about humanity's place in or out of the natural world.
