Natural History Of The Doucs And Snubnosed Monkeys:

The Natural History Of The Doucs And Snub-nosed Monkeys Nina G Jablonski,1998-06-25 The Natural History of the Doucs and Snub nosed Monkeys provides a comprehensive introduction to the biology of some of the rarest and least known nonhuman primates Virtually unstudied and unknown until 20 years ago the doucs and snub nosed monkeys occupy some of the most remote habitats of eastern Asia and exhibit some of the most unusual adaptations of any nonhuman primates The volume provides detailed information on these rare Asian primates that will be useful to practitioners of evolutionary biology field and laboratory primatology systematics field ecology and conservation biology *The Natural History of the Doucs and Snub-nosed Monkeys* Nina G. Jablonski,1998 producing a nicely bound and printed book with excellently reproduced illustrations including colour photographs the publishers recommended price is more than fair International Zoo News 1998 This book is an excellent addition to the conservation biology literature and will be a valuable reference for all university libraries I highly recommend this book to all those who are concerned about the conservation and management of highly endangered Asian primates Journal of Mammalogy 1999

The Natural History of Primates Robert W. Sussman, Donna Hart, Ian C. Colquhoun, 2022-10-20 The interest in primates from lemurs to gorillas has never been greater Primatologists are continually finding evidence in the behavior and ecology of our closest genetic relatives that sheds light on human origins So just who are these 520 species of complex and intelligent mammals inhabiting the Neotropics Africa Madagascar and Asia The Natural History of Primates provides the most current information on wild primates from experts who have studied them in their natural environments This volume provides up to date facts and figures on how groups of social primates interact with each other and the plants and other animal species in their ecosystems what they eat which predators might eat them how males and females seek mates how infants are raised and myriad other fascinating details about their visual and vocal communication their ability to craft and use tools and the varieties of locomotion they employ As human populations continue to expand into the rainforests savannas and woodlands where nonhuman primates dwell the preservation of these species becomes ever more important The Natural History of Primates is unique in its emphasis on the conservation status of primate species and its ample discussions of how humans and nonhuman primates can coexist in the twenty first century Elwyn Simons: A Search for Origins John G Fleagle, Christopher C. Gilbert, 2007-12-03 For nearly a half century Dr Simons has dominated the study of primate evolution This volume summarizes the current state of knowledge in many aspects of primate and human evolution that have been studied by Simons and his colleagues and place it in a broader paleontological and historical perspective The book contains the results of new research as well as reviews of many of the critical issues in primate and human evolution during the last half of the twentieth century *Primates in Fragments* Laura K. Marsh, 2013-06-29 This volume was created initially from a symposium of the same name presented at the International Primatological Society s XVIII Congress in Adelaide South Australia 6 12

January 2000 Many of the authors who have contributed to this text could not attend the symposium so this has become another vehicle for the rapidly growing discipline of Fragmentation Science among primatologists Fragmentation has quickly become a field separate from general ecology which underscores the severity of the situation since we as a planet are rapidly losing habitat of all types to human disturbance Getting ecologists particularly primatologists to admit that they study in fragments is not easy In the field of primatology one studies many things but rarely do those things genetics behavior population dynamics get called out as studies in fragmentation For some reason fragmentation primatologists fear that our work is somehow not as good as those who study in continuous habitat We worry that perhaps our subjects are not demonstrating as robust behaviors as they should given fragmented or disturbed habitat conditions I had a colleague openly state that she did not work in fragmented forests that she merely studied behavior when it was clear that her study sites everyone of them was isolated habitat Our desire to be just another link in the data chain for wild primates is so strong that it makes us deny what kinds of habitats we are working in However *The Colobines* Ikki Matsuda, Cyril C. Grueter, Julie A. Teichroeb, 2022-02-24 Covering colobine biology behaviour ecology and conservation this book summarises current knowledge of this fascinating group of primates *Primate Ethnographies* Karen B. Strier, 2025-08-29 This new second edition of *Primate Ethnographies Fieldwork from Across the Globe* is a collection of first person accounts of immersive field studies of primates people and institutions revealing the excitement of studying wild primates and the multi faceted challenges involved in conducting field research This collection of essays spans the diversity of the Primate Order from lemurs to monkeys and apes The ethnographic accounts are written by experts whose diverse backgrounds and experiences reveal the broader nature of the primatological field experience and provide glimpses into the many different pathways one can follow into the field of contemporary primatology This new edition features updated chapters from original contributors as well as new voices from across the global north and south representing cutting edge scholarship in the field Collectively these essays provide insights into the driving concerns of field primatology as it is practiced across the world *Primate Ethnographies Fieldwork from Across the Globe* is of interest to students from fields across the academy including Primatology Anthropology Wildlife Ecology Zoology Conservation Biology and Science Nature Writing Recent Advances in the Evolution of Euarchontoglires Lucja A. Fostowicz-Frelik, Deyan Ge, Irina Ruf, 2022-01-27 **Post-Genome Biology of Primates** Hirohisa Hirai, Hiroo Imai, Yasuhiro Go, 2012-04-23 In 2001 first reports of the human draft genome were published Since then genomes of many other organisms have been sequenced including several primate species the chimpanzee rhesus macaque gorilla orangutan gibbon baboon marmoset tarsier galago lemur and more recently Neanderthals In a new era of post genome biology scientists now have the vast amount of information revealed by genome research to confront one of the most challenging fundamental questions in primatology and anthropology What makes us human This volume comprises a collection of articles on a variety of topics relevant to primate genomes including evolution human origins genome structure

chromosome genomics and bioinformatics The book covers the cutting edge research in molecular primatology and provides great insights into the functional diversity of primates This valuable collection will benefit researchers and students including primatologists anthropologists molecular biologists evolutionary biologists and animal behaviorists **Vietnam: A Natural History**

Eleanor Jane Sterling, Martha Maud Hurley, Le Duc Minh, 2008-10-01 A country uncommonly rich in plants animals and natural habitats the Socialist Republic of Vietnam shelters a significant portion of the world's biological diversity including rare and unique organisms and an unusual mixture of tropical and temperate species This book is the first comprehensive account of Vietnam's natural history in English Illustrated with maps photographs and thirty five original watercolor illustrations the book offers a complete tour of the country's plants and animals along with a full discussion of the factors shaping their evolution and distribution Separate chapters focus on northern central and southern Vietnam regions that encompass tropics subtropics mountains lowlands wetland and river regions delta and coastal areas and offshore islands The authors provide detailed descriptions of key natural areas to visit where a traveler might explore limestone caves or glimpse some of the country's twenty seven monkey and ape species and more than 850 bird species The book also explores the long history of humans in the country including the impact of the Vietnam American War on plants and animals and describes current efforts to conserve Vietnam's complex fragile and widely threatened biodiversity Primate Adaptation and Evolution

John Fleagle, 2013-03-08 Primate Adaptation and Evolution Third Edition is a thorough revision of the text of choice for courses in primate evolution The book retains its grounding in the extant primate groups as the best way to understand the fossil trail and the evolution of these modern forms However this coverage is now streamlined making reference to the many new and excellent books on living primate ecology and adaptation a field that has burgeoned since the first edition of Primate Adaptation and Evolution By drawing out the key features of the extant families and referring to more detailed texts the author sets the scene and also creates space for a thorough updating of the exciting developments in primate palaeontology and the reconstruction through early hominid species of our own human origins This updated version covers recent developments in primate paleontology and the latest taxonomy and includes over 200 new illustrations and revised evolutionary trees This text is ideal for undergraduate and post graduate students studying the evolution and functional ecology of primates and early fossil hominids Long awaited revision of the standard student text on primate evolution Full coverage of newly discovered fossils and the latest taxonomy Over 200 new illustrations and revised evolutionary trees **Old World Monkeys** Paul F. Whitehead, Clifford J. Jolly, 2000-05-04 Old World monkeys

Cercopithecoidea are the most successful and diverse group of living non human primates in terms of the number of species behavioural repertoires and ecology They have much to teach us about the processes of evolution and the principles of ecology and are among our closest living relatives This volume presents a broad technical account of cercopithecoid biology including molecular behavioural and morphological approaches to phylogeny population structure allometry fossil history

functional morphology ecology cognitive capabilities social behaviour and conservation It will be the definitive reference on this group for professionals and graduate students in primatology animal behaviour paleontology morphology systematics and physical anthropology but will also be useful to senior undergraduates **Shaping Primate Evolution** Fred Anapol, Rebecca Z. German, Nina G. Jablonski, 2004-05-20 Shaping Primate Evolution is an edited collection of papers about how biological form is described in primate biology and the consequences of form for function and behavior The contributors are highly regarded internationally recognized scholars in the field of quantitative primate evolutionary morphology Each chapter elaborates upon the analysis of the form function behavior triad in a unique and compelling way This book is distinctive not only in the diversity of the topics discussed but also in the range of levels of biological organization that are addressed from cellular morphometrics to the evolution of primate ecology The book is dedicated to Charles E Oxnard whose influential pioneering work on innovative metric and analytic techniques has gone hand in hand with meticulous comparative functional analyses of primate anatomy Through the marriage of theory with analytical applications this volume will be an important reference work for all those interested in primate functional morphology Primate Conservation ,1997

Seasonality in Primates Diane K. Brockman, Carel P. van Schaik, 2005-11-17 The emergence of the genus Homo is widely linked to the colonization of new highly seasonal savannah habitats However until recently our understanding of the possible impact of seasonality on this shift has been limited because we have little general knowledge of how seasonality affects the lives of primates This book documents the extent of seasonality in food abundance in tropical woody vegetation and then presents systematic analyses of the impact of seasonality in food supply on the behavioural ecology of non human primates Syntheses in this volume then produce broad generalizations concerning the impact of seasonality on behavioural ecology and reproduction in both human and non human primates and apply these insights to primate and human evolution Written for graduate students and researchers in biological anthropology and behavioural ecology this is an absorbing account of how seasonality may have affected an important episode in our own evolution **Nutrient Requirements of Nonhuman Primates** National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Ad Hoc Committee on Nonhuman Primate Nutrition, Committee on Animal Nutrition, 2003-03-01 This new release presents the wealth of information gleaned about nonhuman primates nutrition since the previous edition was published in 1978 With expanded coverage of natural dietary habits gastrointestinal anatomy and physiology and the nutrient needs of species that have been difficult to maintain in captivity it explores the impact on nutrition of physiological and life stage considerations infancy weaning immune function obesity aging and more The committee also discusses issues of environmental enrichment such as opportunities for foraging Based on the world's scientific literature and input from authoritative sources the book provides best estimates of nutrient requirements The volume covers requirements for energy carbohydrates including the role of dietary fiber proteins and amino acids fats and fatty acids minerals fat soluble and water soluble vitamins and water The

book also analyzes the composition of important foods and feed ingredients and offers guidelines on feed processing and diet formulation

The Encultured Brain Daniel H. Lende, Greg Downey, 2012-08-24 Basic concepts and case studies from an emerging field that investigates human capacities and pathologies at the intersection of brain and culture The brain and the nervous system are our most cultural organs Our nervous system is especially immature at birth our brain disproportionately small in relation to its adult size and open to cultural sculpting at multiple levels Recognizing this the new field of neuroanthropology places the brain at the center of discussions about human nature and culture Anthropology offers brain science more robust accounts of enculturation to explain observable difference in brain function neuroscience offers anthropology evidence of neuroplasticity's role in social and cultural dynamics This book provides a foundational text for neuroanthropology offering basic concepts and case studies at the intersection of brain and culture After an overview of the field and background information on recent research in biology a series of case studies demonstrate neuroanthropology in practice Contributors first focus on capabilities and skills including memory in medical practice skill acquisition in martial arts and the role of humor in coping with breast cancer treatment and recovery then report on problems and pathologies that range from post traumatic stress disorder among veterans to smoking as a part of college social life Contributors Mauro C Balieiro Kathryn Bouskill Rachel S Brezis Benjamin Campbell Greg Downey Jos Ernesto dos Santos William W Dressler Erin P Finley Agust n Fuentes M Cameron Hay Daniel H Lende Katherine C MacKinnon Katja Pettinen Peter G Stromberg

Mammals of Africa: Volume II Jonathan Kingdon, 2014-11-20 Mammals of Africa MoA is a series of six volumes which describes in detail every currently recognized species of African land mammal This is the first time that such extensive

coverage has ever been attempted and the volumes incorporate the very latest information and detailed discussion of the morphology distribution biology and evolution including reference to fossil and molecular data of Africa's mammals. With more than 1 160 species and 16 18 orders Africa has the greatest diversity and abundance of mammals in the world. The reasons for this and the mechanisms behind their evolution are given special attention in the series. Each volume follows the same format with detailed profiles of every species and higher taxa. The series includes hundreds of colour illustrations and pencil drawings by Jonathan Kingdon highlighting the morphology and behaviour of the species concerned as well as line drawings of skulls and jaws by Jonathan Kingdon and Meredith Happold. Every species also includes a detailed distribution map. Edited by Jonathan Kingdon, David Happold, Tom Butynski, Mike Hoffmann, Meredith Happold and Jan Kalina and written by more than 350 authors, all experts in their fields, *Mammals of Africa* is as comprehensive a compendium of current knowledge as is possible. Extensive references alert readers to more detailed information. Volume II is edited by Thomas Butynski, Jonathan Kingdon and Jan Kalina and contains profiles of 93 species of primates; this includes the great apes, Old World monkeys, lorises and galagos.

Complexities Susan McKinnon, Sydel Silverman, 2005-06. This book mobilizes experts from several fields of anthropology, cultural, archaeological, linguistic and biological to offer a compelling challenge to the resurgence of reductive theories of human biological and social life. It presents evidence to contest such theories and to provide a multifaceted account of the complexity and variability of the human condition. Back cover
