Ryan,2007-05-08 In this time of edited volumes when the list of individual contributors may reach double figures it is appropriate to question the usefulness of a volume with such a broad scope by a single author The answer is simple For years he has believed that the rather sharp distinction between fundamental and applied aspects of this discipline has ill served the significance of each and has diminished the incidence of fruitful synergies Yet the need for these was never greater and this case may be developed by a single author with experience of each aspect The inclusion of a Chapter on Genetic Engineering may raise some doubts but it is enabled by the chosen title Chemoreception as distinct from Chemoperception the latter implies detection of a chemical followed by a behavioural response But the former broader category subsumes Chemoperception and allows for the reception of a chemical toxin so potent as to prelude a behavioural

or physiological response other than death Accordingly chemical toxins are a legitimate inclusion In which event their delivery through a GM plant is as appropriate for study as their application in a spray
