

Natural Resource Economics: Methodological Orientations and Policy Effectiveness

Leonard Shabman

Increasing numbers of resource economists serve as advisors to, and employees of, government agencies. To be effective in this advisory role requires at least a modest amount of methodological thinking. I will develop this argument by recasting Randall's schools of resource economics into two groups: the mainstream, which includes his N/RP, PC/U, and PC/I, and the institutional, or his I/LE. Also, I will not distinguish resource economics from the larger discipline. This more aggregated classification system will facilitate my discussion of how methodological orientations of economists affect their approach to, and effectiveness in, the public policy process. I will argue that an institutionalist understanding of the governmental decision process is essential to being effective as a mainstream resource economist.

The Scope of Economics

Mainstream economics offers a compelling demonstration that markets can solve the resource allocation problem through the creation of exchange prices. Therefore, the mainstream resource economist begins any investigation with a focus on the potential for, and limits of, voluntary market exchange for allocating land and water resources. However, the mainstream economist often does not stop with a description of market possibilities. Rather, by implicitly or explicitly accepting Wicksellian compensation as a necessary principle of justice, social organization through market exchange can be treated as a superior organizational form. This perspective permits the economic analyst to defend economic efficiency, the product of the exchange process, as the preeminent determinant of so-

cial welfare. Such a prescriptive position often proceeds without acknowledgement that exchange solutions to the resource allocation problem reflect a distribution of income determined by existing property rights and the existing knowledge base that determines preferences and production technology (Bromley). Underlying this approach is the professionally conscious decision to remove the study of preferences and distributional concerns from the core of the discipline (Cooter and Rappaport).

Mainstream prescriptions for government spending and regulation reflect this underlying commitment to the exchange process and the efficiency test. For the mainstream, government's role is to facilitate market exchange by the definition and enforcement of transferable property rights; or, if markets will not function, the resource allocation decisions of government should mimic the allocative results of an idealized market. Therefore, contemporary benefit-cost analysts who place their faith in shadow pricing to discover exchange values as a guide for policy, proponents of effluent taxes (with their Pigovian and Coasian strands) for pollution control, and the recent advocates of privatization, all are arguing that government programs should adhere to pursuit of the same strategic goal of economic efficiency. The only distinctions that are real are in the recommended tactics for assuring that government secures market-like allocative results.

Institutionalists would not dispute the allocative potential of markets or market-like institutions. However, they stop short of giving the resulting resource allocations any prescriptive significance. The institutional focus of study extends beyond exchange systems to the multiple cultural political and social institutions and power centers that affect property rights, values people hold, and resource allocation. Exchange as a social organizer becomes one component of power to influence

Natural Resource Economics Daniel W. Bromley, 2012-12-06 When approached by Warren Samuels the series editor about organizing a volume on natural resource economics I was at a loss as to how one might possibly capture in several major essays plus several shorter comments thereon all of the diverse activities that fall within this exciting discipline I was further asked to have the book take an affirmative but constructively critical look at its subject The volume was to be interpretative it was to be reasonably comprehensive and yet it was to attempt to present divergent views on the development tensions present status and especially possible lines of development of each field Upon reflection I decided to have the book focus on natural resource economics as a distinctly applied policy science Hence the title **Natural Resource Economics Policy Problems and Contemporary Analysis** While this allowed clarification of a particular sort it did little to narrow the range of policy issues that ought to be considered candidates for inclusion But it did seem after some thought that three broad issues persist at center stage in natural resource policy
