Natural gas issues United States. Congress. House. Committee on Energy and Commerce. Subcommittee on Fossil and Synthetic Fuels, 1983 The Natural Problem of Consciousness Pietro Snider, 2017-06-12 The Natural Problem of Consciousness is the problem of understanding why there are presently conscious beings at all Given a non reductive naturalist framework taking consciousness as an ontologically subjective biological phenomenon how can we rationally explain the fact that the actual world has turned out to be one where there are presently living beings that can feel rather than having developed as a zombie world in which there would be no conscious experiences of any kind This book introduces the Natural Problem by relating it to central problems in the philosophy of mind metaphysical mind body problem Hard Problem of consciousness and emphasizing the distinctive interest of its diachronic dimension Ranging from philosophy to biology and neuroscience it offers a thorough analysis aimed at better understanding what could explain why phenomenal consciousness has been preserved throughout evolution by natural selection This is an original engaging and thought provoking philosophical study of a neglected but fundamental question regarding the nature and origin of consciousness

The Really Hard Problem Owen Flanagan, 2009-02-13 A noted philosopher proposes a naturalistic rather than supernaturalistic way to solve the really hard problem how to live in a meaningful way how to live a life that really matters even as a finite material being living in a material world If consciousness is the hard problem in mind science explaining how the amazing private world of consciousness emerges from neuronal activity then the really hard problem writes Owen Flanagan in this provocative book is explaining how meaning is possible in the material world How can we make sense of the magic and mystery of life naturalistically without an appeal to the supernatural How do we say truthful and enchanting things about being human if we accept the fact that we are finite material beings living in a material world or in Flanagan's description short lived pieces of organized cells and tissue Flanagan's answer is both naturalistic and enchanting We all wish to live in a meaningful way to live a life that really matters to flourish to achieve eudaimonia to be a happy spirit Flanagan calls his empirical normative inquiry into the nature causes and conditions of human flourishing eudaimonics Eudaimonics systematic philosophical investigation that is continuous with science is the naturalist's response to those who say that science has robbed the world of the meaning that fantastical wishful stories once provided Flanagan draws on philosophy neuroscience evolutionary biology and psychology as well as on transformative mindfulness and self cultivation practices that come from such nontheistic spiritual traditions as Buddhism Confucianism Aristotelianism and Stoicism in his quest He gathers from these disciplines knowledge that will help us understand the nature causes and constituents of well being and advance human flourishing Eudaimonics can help us find out how to make a difference how to contribute to the accumulation of good effects how to live a meaningful life

Rowe, 2012-12-06 Wood as found in trees and bushes was of primary importance to ancient humans in their struggle to control their environment Subsequent evolution through the Bronze and Iron Ages up to our present technologically advanced society has hardly diminished the importance of wood Today its role as a source of paper products furniture building materials and fuel is still of major significance Wood consists of a mixture of polymers often referred to as lignocellulose The cellulose microfibrils consist of an immensely strong linear polymer of glucose They are associated with smaller more complex polymers composed of various sugars called hemicelluloses These polysaccharides are embedded in an amorphous phenylpropane polymer lignin creating a remarkably strong composite structure the lignocellulosic cell wall Wood also contains materials that are largely extraneous to this lignocellulosic cell wall These extracellular substances can range from less than 1070 to about 35% of the dry weight of the wood but the usual range is 2% 10% Among these components are the mineral constituents salts of calcium potassium sodium and other metals particularly those present in the soil where the tree is growing Some of the extraneous components of wood are too insoluble to be extracted by inert solvents and remain to give extractive free wood its color very often these are high molecular weight polyphenolics
