*Water and Wastewater Management* Müfit Bahadır, Andreas Haarstrick, 2022-03-25 This volume addresses the situation of water and wastewater management from a global angle underpinned by selected case studies Without doubt water and wastewater management are among the greatest challenges of our century and there is also no doubt that the challenges posed by climate change will become even greater However most efforts especially in developing countries but also in the so called developed countries have been less than optimal or not optimal at all In particular there are still too many people who have to live without clean water and decent sanitation Today 2.2 billion people lack access to safely managed drinking water and wastewater and 4.2 billion people lack safely managed sanitation services The question why this is so and why in many cases in developing countries is discussed in this book among other urgent water and wastewater management issues The publication of this book is the start of a book series that in more detail critically reviews discusses and analyzes the water and wastewater situation and management in different regions and countries worldwide

**Pharmaceutical Residues in the Environment** Jolanta Kumirska, 2020-11-18 Pharmaceuticals due to their pseudo persistence and biological activity as well as their extensive use in human and veterinary medicine are a class of environmental contaminants that is of emerging concern In contrast to some conventional pollutants they are continuously delivered at low levels which might give rise to toxicity even without high persistence rates These chemicals are designed to have a specific physiological mode of action and to resist frequently inactivation before

exerting their intended therapeutic effect These features among others result in the bioaccumulation of pharmaceuticals which are responsible for toxic effects in aquatic and terrestrial ecosystems It is extremely important to know how to remove them from the environment and or how to implement procedures or treatments resulting in their biological inactivation Although great advances have been made in their detection in aquatic matrices there remains limited analytical methodologies available for the trace analysis of target and non target pharmaceuticals in matrices such as soils sediments or biota There are still many gaps in the data on their fate and behavior in the environment as well as on their threats to ecological and human health This book has included nine current research and three review articles in this field **Waste**

adequately captured and understood This book aims to address this gap by compiling case studies and reviews that explore NbS for urban water management from different regions and perspectives and highlight emerging challenges and opportunities for harnessing their potential      **Fixed-film Reactors In Wastewater Treatment** Nicholas F

Gray, 2020-08-17 Our rivers and lakes are continuously self purifying thanks to algal and bacterial biofilms that grow over the surface of stones and other debris This same process has been employed for over a century to treat our municipal and industrial wastewater in specially designed fixed film reactors that maximize this microbial activity by providing ideal growth conditions and unlimited food and oxygen Fixed film or attached biofilm reactors are unique in their ability to treat complex wastewaters and shock loadings using far less energy than other wastewater treatment processes such as activated sludge making them a sustainable treatment option Targeted at undergraduate and postgraduate engineers and scientists this book follows the structure of bestseller Biology of Wastewater Treatment This volume gives an expanded and up to date overview of the use of fixed film reactors in wastewater treatment with content spanning from biofilm formation to traditional trickling filters and rotating biological contactor technology advanced submerged systems including MBBRs and IFAS and their key role in the treatment of contaminated air and finally to nitrogen removal employing new microbial pathways such as
