**Woodland Conservation and Management** G. F. Peterken, 2013-11-11 Professor John Harper in his recent *Population Biology of Plants* 1977 made a comment and asked a question which effectively states the theme of this book. Noting that one of the consequences of the development of the theory of vegetational climax has been to guide the observer's mind forwards i.e. that vegetation is interpreted as a stage on the way to something he commented that it might be more healthy and scientifically more sound to look more often backwards and search for the explanation of the present in the past to explain systems in relation to their history rather than their goal. He went on to contrast the disaster theory of plant succession which holds that communities are a response to the effects of past disasters with the climax theory that they are stages in the approach to a climax state and then asked do we account most completely for the characteristics of a population by a knowledge of its history or of its destiny. Had this question been put to R. S. Adamson, E. J. Salisbury, A. G. Tansley or A. S. Watt who are amongst the giants of the first forty years of woodland ecology in Britain their answer would surely have been that understanding lies in a knowledge of destiny. Whilst not unaware of the historical facts of British woodlands they were preoccupied with ideas of natural succession and climax and tended to interpret their observations in these terms.

*Trees and Woodlands* George Peterken, 2023-02-16 Features almost 300 colour photographs and brings together more than 60 years of research by a leading voice in British woodland ecology. Trees define woodland. They provide a complex multi-layered habitat for a great range of wildlife yet they are wildlife themselves reacting to their circumstances and each other. Woodlands are important to people supplying timber, food and fuel, accumulating carbon and offering places of refuge and refreshment. But they are also under threat, some stand in the way of progress and all are becoming increasingly vulnerable to neglect, disease and climate change. *Trees and Woodlands* brings together decades of research to explore the ecology, nature conservation and wider cultural value of our native trees and shrubs and the various ways they have combined as woodland. Incorporating personal experiences from 60 years as a forest ecologist, Peterken describes the long history of use and management, how this has influenced woodland wildlife and our art, beliefs and social attitudes. He concludes that most woods should be managed, their timber and small wood being put to good use but recognises that this is all part of a larger question: the future of ourselves. Containing nearly 300 photographs and interspersed with box texts describing the history and ecology of representative woods across Britain, this is a commentary on trees, woodlands and our relationship with them from one of our most highly regarded forest ecologists.

*Woodland Habitats* Mark Frater, Helen J. Read, 2005-07-12 *Woodland habitats* explores the history and ecology of British woodland and explains why they are such a valuable resource. It examines the wide range of

different types of woodland habitats and the typical species that live within them It offers a practical guide to all the key woodland issues including conservation and management coppicing grazing in woodlands fire breaks recreation management for game pasture woodland and commercial forestry Woodland Habitats also includes a guide to notable sites with location maps and illustrations suggested practical projects and a full glossary of terms

**Forest Policies and Social Change in England** Sylvie Nail, 2008-05-08 Forestry has been witness to some dramatic changes in recent years with several Western countries now moving away from the traditional model of regarding forests merely as sources of wood Rather these countries are increasingly recognizing their forests as multi purpose resources with roles which go far beyond simple economics In this

innovative book Sylvie Nail uses England as a case study to explore the relationships between forests society and public perceptions raising important questions about forest policy and management both now and in the future Adopting a sociological approach to forest policy and management the book discusses the current validity of the two principles underlying forestry since the Middle Ages first that forestry should only exist when no better use of the land can be made and second that forestry itself should be profitable The author stresses how values and perceptions shape policies and conversely how policies can modify perceptions and also how policies can fail if they do not take perceptions into account She concludes that many of the issues facing English forestry in the 21st century from leisure health and amenity provision through education and rural as well as urban regeneration to biodiversity conservation go well beyond both national borders and the scope of forestry Indeed forestry in the 21st century seems to be less about planting and managing trees than about being a vector and a mirror of social change This novel synthesis provides a valuable resource for advanced students and researchers from all areas of natural resource studies including those interested in social history socio economics cultural geography and environmental psychology as well as those studying landscape ecology environmental history policy analysis and natural resource management
