

Characteristics of naturalistic inquiry

- Purposive sampling: try to choose a sample that gives you the widest range, to include as much information as possible (maximum variation sampling). Sampling is emergent; serial; continually focused and selected to the point of redundancy
- Inductive data analysis.
- Grounded theory: theory that emerges from the data and that “explains” the data. Negative case analysis
- Emergent design: “Tell me what questions I need to ask, and then answer them for me”. Emerges through continuous data analysis, interactions, peer debriefing, journals.
