Freshwater Fish Distribution Tim M. Berra, 2008-09-15 With more than 29 000 species fishes are the most diverse group of vertebrates on the planet Of that number more than 12 000 species are found in freshwater ecosystems which occupy less than 1 percent of the Earth's surface and contain only 2.4 percent of plant and animal species But on a hectare for hectare basis freshwater ecosystems are richer in species than more extensive terrestrial and marine habitats Examination of the distribution patterns of fishes in these fresh waters reveals much about continental movements and climate changes and has long been critical to biogeographical studies and research in ecology and evolution Tim Berra's seminal resource Freshwater Fish Distribution maps the 169 fish families that swim in fresh water around the world Each family account includes the class subclass and order a pronunciation guide to the family name life cycle information and interesting natural history facts Each account is illustrated many with historical nineteenth century woodcuts Now available in paperback this heavily cited work in ichthyology and biogeography will serve as a reference for students a research support for professors and a helpful guide to tropical fish hobbyists and anglers

Where the Wild Things Are Now

Rebecca Cassidy, Molly Mullin, 2020-07-12 Domestication has often seemed a matter of the distant past a series of distinct events involving humans and other species that took place long ago Today as genetic manipulation continues to break new barriers in scientific and medical research we appear to be entering an age of biological control Are we also writing a new chapter in the history of domestication Where the Wild Things Are Now explores the relevance of domestication for anthropologists and scholars in related fields who are concerned with understanding ongoing change in processes affecting humans as well as other species From the pet food industry and its critics to salmon farming in Tasmania the protection of

endangered species in Vietnam and the pigeon fanciers who influenced Darwin Where the Wild Things Are Now provides an urgently needed re examination of the concept of domestication against the shifting background of relationships between humans animals and plants

Strategies for Conserving Native Salmonid Populations at Risk from Nonnative Fish Invasions Kurt D. Fausch, 2006 Native salmonid populations in the inland West are often restricted to small isolated habitats at risk from invasion by nonnative salmonids However further isolating these populations using barriers to prevent invasions can increase their extinction risk This monograph reviews the state of knowledge about this tradeoff between invasion and isolation We present a conceptual framework to guide analysis focusing on four main questions concerning conservation value vulnerability to invasion persistence given isolation and priorities when conserving multiple populations Two examples illustrate use of the framework and a final section discusses opportunities for making strategic decisions when faced with the invasion isolation tradeoff
