Naturally Occurring Antioxidants Richard A. Larson, 1997-09-05 This text describes the roles of naturally occurring antioxidants in living cells It focuses on stoichiometric antioxidants small molecules that the cell can rapidly produce and transport into regions of oxidative stress Naturally Occurring Antioxidants reflects the growing interest in these compounds among the scientific community This book explores how quantitative measures can provide a more complete understanding of important substances and their reactions allowing us to address some crucial environmental and health questions Environmental chemists and toxicologists general organic and inorganic chemists life and environmental scientists environmental and chemical engineers nutritionists and students of environmental chemistry will all find Naturally Occurring Antioxidants to contain thought provoking topics for further study

Natural Antioxidants Rituparna Banerjee, Arun K. Verma, Mohammed Wasim Siddiqui, 2017-06-26 In the recent years considerable research has been carried out evaluating natural substances as antioxidative additives in food products leading to novel combinations of antioxidants and the development of novel food products In addition to their antioxidative capacity these natural additives have positive effects on the human body with documented health benefits This valuable new book provides an overview of natural antioxidants their sources methods of extraction regulatory aspects and application techniques specifically focusing on different foods of animal origin to improve their oxidative stability

Handbook of Antioxidant Methodology Paul D Prenzler, Danielle Ryan, Kevin Robards, 2021-10-12 The field of antioxidant research has grown rapidly over the last 30 years and shows no sign of slowing down In order to understand how antioxidants work it is essential to understand how their activity is measured However antioxidant activity measurements are controversial and their value has been challenged This book addresses a number of the controversies on antioxidant testing methods Specifically the book highlights the importance of context helping the reader to decide what methods are most appropriate for different situations how the results can be interpreted and what information may be inferred from the data There are a multiplicity of methods for measuring activity with no standardized method approved for in vitro or in vivo testing In order to select an appropriate method a thorough knowledge of the processes associated with reduction oxidation is essential leading to an improved understanding and use of activity measurements and the associated data The book presents background information in a unique style which is designed to assist readers to grasp the fundamentals of redox processes as well as thermodynamics and kinetics which are essential to later chapters Recovery and extraction of antioxidants from diverse matrices are presented in a clear and logical fashion along with methods used to determine antioxidant activity from a mechanistic perspective Other chapters present current methodologies used for activity testing in different sample types ranging from foods and plants to body fluids and even to packaging but always with a strong emphasis on the nature of the sample and the underlying chemistry of the method A number of emerging techniques for assessing antioxidant behaviour namely electrochemical methods chip technology

exploiting microfluidic devices metabolomics plus studies of gene and protein expression are examined Ultimately these techniques will be involved in generation of big data for which an understanding of chemometrics will be essential in drawing valid conclusions The book is written to appeal to a wide audience but will be particularly helpful for any researchers who are attempting to make sense of the vast literature and often conflicting messages on antioxidant activity Recent
