Brooks,2010-09-23 Biofortification the enrichment of staple food crops with essential micronutrients has been heralded as a uniquely sustainable solution to the problem of micronutrient deficiency or hidden hunger Considerable attention and resources are being directed towards the biofortification of rice the world s most important food crop Through an in depth analysis of international rice biofortification efforts across the US Philippines and China this book provides an important critique of such goal oriented top down approaches These approaches the author argues exemplify a model of global public goods science that is emerging within complex international research networks It provides vital lessons for those researching and making decisions about science and research policy showing that if this model becomes entrenched it is likely to channel resources towards the search for silver bullet solutions at the expense of more incremental approaches that respond to locality diversity and the complex and uncertain interactions between people and their environments The author proposes a series of key changes to institutions and practices that might allow more context responsive alternatives to emerge These issues are particularly important now as increasing concerns over food security are leading donors and policy makers to commit to ambitious visions of impact at scale visions which may never become a reality and may preclude more effective pathways from being pursued Published in association with the Economic and Social Research Council ESRC

Cooperation Networks and Economic Development Andrés Cárdenas O'Farrill,2021-02-11 For most Western audiences Cuba is a touristic paradise stuck in time and virtually detached from world technology networks by the US embargo anything but a hub of industrial innovation and high value added biotechnology However a closer look reveals more subtle but equally powerful stories that challenge the homogenizing assumptions of conventional economics and open up scope for more sophisticated reflections on Cuban economy and industry From this kind of enquiry emerges the case of the internationally respected Cuban biotech industry as the most successful case of science and technology policy in the country s economic history The book takes an interdisciplinary approach exploring issues such as interdependency purpose and history as natural constituencies of the innovation process It also examines the dynamic and crucial role played by the state in the formation of innovative business enterprises This book will be of interest to academic researchers in the fields of innovation and economic development [Micronutrient Malnutrition and the Impact of Modern Plant Breeding on Public](#)
