Design in Nature Adrian Bejan, J. Peder Zane, 2013-01-08 In this groundbreaking book Adrian Bejan takes the recurring patterns in nature trees tributaries air passages neural networks and lightning bolts and reveals how a single principle of physics the constructal law accounts for the evolution of these and many other designs in our world Everything from biological life to inanimate systems generates shape and structure and evolves in a sequence of ever improving designs in order to facilitate flow River basins cardiovascular systems and bolts of lightning are very efficient flow systems to move a current of water blood or electricity Likewise the more complex architecture of animals evolve to cover greater distance per unit of useful energy or increase their flow across the land Such designs also appear in human organizations like the hierarchical flowcharts or reporting structures in corporations and political bodies All are governed by the same principle known as the constructal law and configure and reconfigure themselves over time to flow more efficiently Written in an easy style that achieves clarity without sacrificing complexity Design in Nature is a paradigm shifting book that will fundamentally transform our understanding of the world around us

**Building Natures** Julia Daniel, 2017-11-28 In Building Natures Julia Daniel establishes the influence of landscape architecture city planning and parks management on American poetry to show how modernists engaged with the green worlds and social playgrounds created by these new professions in the early twentieth century The modern poets who capture these parks in verse explore the aesthetic principles and often failed democratic ideals embedded in the designers verdant architectures The poetry of Carl Sandburg Wallace Stevens William Carlos Williams and Marianne Moore foregrounds the artistry behind our most iconic green spaces At the same time it demonstrates how parks framed rather than ameliorated civic anxieties about an increasingly diverse population living and working in dense unhealthy urban centers Through a combination of ecocriticism urban studies and historical geography Building Natures unveils the neglected urban context for seemingly natural landscapes in several modernist poems such as Moore's An Octopus and Stevens's Notes Toward a Supreme Fiction while contributing to the dismantling of the organic/mechanic divide in modernist studies and ecocriticism

Design in Nature Claus Mattheck, 2012-12-06 The chicken bone you nibbled yesterday and threw away was a high tech product Not only that it was a superlative light weight design functionally adapted to its mechanical requirements No engineer in the world has as yet been able to copy this structural member which is excellently optimized in its external shape and its internal architecture as regards minimum weight and maximum strength The tree stem on which you recently carved your initials has also by life long care for its body steadily improved its internal and external structure and adapted optimally

to new loads In the course of its biomechanical self optimization it will heal up the notch you cut as speedily as possible in order to repair even the smallest weak point which might otherwise cost it its life in the next storm This book is dedicated to the understanding of this biomechanical optimization of shape It is the synthesis of many years of extensive research using the latest computer methods at the Karlsruhe Research Centre to help understand the mechanism of biological self optimization adaptive growth and to simulate it by computer The method newly developed for this purpose was called CAO Computer Aided Optimization With this method it is possible to predict the growth of trees bones and other biological structures from the tiger s claw to the sea urchin s skeleton

**The Nature of the Creative Process in Art** Jaroslav Havelka, 2012-12-06 No single factor determined the growth of this book It may have been that as a novice researcher in Behavioral Psychology I experienced growing discontent with the direction of intellectual activity in which the accent was on methodology and measurement with a distinct atmosphere of dogmatism insecurity and defensiveness The anathema of tender mindedness was attached to any study of mental manifestations that avoided laboratory confirmation and statistical significance Man in his uniqueness and unpredictable potentialities remained unexplored Yet outside the systematic vivisection of variables and their measurement men of originality and genius were studying the mind in its complex yet natural interaction of aspirations values and creative capacities It was almost too easy for me to turn to them for the reorientation of my psychological interest and it was not difficult to find in Freud the most daring and penetrating representant of humanistic psychology Furthermore it could have been the fact that Freud's thoughts on creative processes appeared to me at once starkly original and yet incomplete and fragmentary that led me to reconsider and expand on them Freud's fascination with culture and creativity although frank and serious led him to a peculiar indecisiveness and overcautiousness which was radically different from the dramatic boldness of his therapeutic methods and the depth of his personality theories
