Inventing Human Science Christopher Fox,Roy Porter,Robert Wokler,2023-11-15 The human sciences including psychology anthropology and social theory are widely held to have been born during the eighteenth century This first full length English language study of the Enlightenment sciences of humans explores the sources context and effects of this major intellectual development The book argues that the most fundamental inspiration for the Enlightenment was the scientific revolution of the seventeenth century Natural philosophers from Copernicus to Newton had created a magisterial science of nature based on the realization that the physical world operated according to orderly discoverable laws Eighteenth century thinkers sought to cap this achievement with a science of human nature Belief in the existence of laws governing human will and emotion social change and politics economics and medicine suffused the writings of such disparate figures as Hume Kant and Adam Smith and formed the basis of the new sciences A work of remarkable cross disciplinary scholarship this volume illuminates the origins of the human sciences and offers a new view of the Enlightenment that highlights the

period's subtle social theory awareness of ambiguity and sympathy for historical and cultural difference. The human sciences including psychology, anthropology, and social theory are widely held to have been born during the eighteenth century. This first full-length English language study of the Enlightenment sciences of humans explores the sources, context, The Evolution of Psychological Theory Richard Lowry, 2017-09-29. First published in 1982. Is there any point to studying the historical development of psychological theory apart from the antiquarian interest of finding out who said what when? This book is offered in the belief that there is. It is that such a study can provide valuable background for a critical analytical and in the healthy liberating sense of the term skeptical understanding of the psychological conceptions and presuppositions of the present. This has been the author's aim throughout and it has determined both the selection of materials and the manner in which they are presented. Although the book is not a textbook in the conventional sense of the term, i.e. a comprehensive summary of everything a student needs to know, it was written with students in mind and could be read with profit by students in a number of areas of psychological study.
