## **Nature Of Intrinsic Value:**

*The Nature of Intrinsic Value* Michael J. Zimmerman, 2001 Zimmerman philosophy U of N Carolina Greensboro utilizes G E Moore s Principia Ethica as a springboard to investigate some of the issues raised in Moore s writing in relation to intrinsic value The discussion includes what it means for something to be valuable for its own sake what sort of thing can have intrinsic value and how such a value can be computed The author concludes with an analysis of what kinds of states have intrinsic value and what intrinsic value they have with a focus on several specific states pleasure pain displeasure moral virtue and vice c Book News Inc      **Recent Work on Intrinsic Value** Toni Rønnow-Rasmussen, Michael J.

Zimmerman, 2006-02-15 Recent Work on Intrinsic Value brings together for the first time many of the most important and influential writings on the topic of intrinsic value to have appeared in the last half century During this period inquiry into the nature of intrinsic value has intensified to such an extent that at the moment it is one of the hottest topics in the field of theoretical ethics The contributions to this volume have been selected in such a way that all of the fundamental questions concerning the nature of intrinsic value are treated in depth and from a variety of viewpoints These questions include how to understand the concept of intrinsic value what sorts of things can have intrinsic value and how to compute intrinsic value The editors have added an introduction that ties these questions together and places the contributions in context and they have also provided an extensive bibliography The result is a comprehensive balanced and detailed picture of current thinking about intrinsic value one that provides an indispensable backdrop against which future writings on the topic may be assessed

Why care for Nature? Dirk Willem Postma, 2006-10-31 Don t you see that the whole aim of Newspeak is to narrow the range of thought 1 George Orwell This book has been written in a time of environmental neglect A time in which the expansive needs of multinational corporations western consumer interests and the politically celebrated ideals of economic growth and technological progress appear to override any consideration for preserving natural beauty as well as consideration for those unable to speak and negotiate on their own behalf third world citizens future generations animals plants and landscapes This neglect is evident in the withdrawal of national governments from the requirements of international agreements on the reduction of greenhouse gas emissions Kyoto treaty it is manifest in the organised inability and unwillingness to establish more equal trade relations between rich and poor countries as well as in the lack of political commitment to protect extraordinary sites of natural beauty from economic exploitation Alaska the Amazon rainforests the Dutch Wadden Sea In times like these environmental education is a hazardous and primarily ambiguous enterprise since it easily comes to function as a means to foist present responsibilities onto future generations Some proponents for instance argue that environmental education should create a new generation of citizens who are greener than their parents Bell 2004 p 43 Thus new born citizens are burdened with environmental responsibilities that we failed to live up to ourselves

**Duties Regarding Nature** Toby Svoboda, 2015-06-26 In this book Toby Svoboda develops and defends a Kantian

environmental virtue ethic challenging the widely held view that Kant's moral philosophy has little to offer environmental ethics. On the contrary, Svoboda contends that on Kantian grounds there is good moral reason to care about non-human organisms in their own right and to value their flourishing independently of human interests since doing so is constitutive of certain environmental virtues. Svoboda argues that Kant's account of indirect duties regarding nature can ground a compelling environmental ethic. The Kantian duty to develop morally virtuous dispositions strictly proscribes unnecessarily harming organisms and it also gives us moral reason to act in ways that benefit such organisms. Svoboda's account engages the recent literature on environmental virtue including Rosalind Hursthouse, Philip Cafaro, Ronald Sandler, Thomas Hill, and Louke van Wensveen and provides an original argument for an environmental ethic firmly rooted in Kant's moral philosophy.

**Ethics of Nature** Angelika Krebs, 2013-02-06 Is nature's value only instrumental value for human beings or does nature also have intrinsic value? Can traditional anthropocentrism be defended or must we move to a new physiocentric moral position? This study develops a critical taxonomy or map of thirteen arguments for the conservation of nature. It defends the moral intrinsic value of sentient animals but not of nonsentient nature. The arguments are phrased in a simple, plastic, and concise language.

*Thoreau's Living Ethics* Philip Cafaro, 2010-01-25 Thoreau's *Living Ethics* is the first full, rigorous account of Henry Thoreau's ethical philosophy. Focused on Walden but ranging widely across his writings, the study situates Thoreau within a long tradition of ethical thinking in the West from the ancients to the Romantics and on to the present day. Philip Cafaro shows Thoreau grappling with important ethical questions that agitated his own society and discusses his value for those seeking to understand contemporary ethical issues. Cafaro's particular interest is in Thoreau's treatment of virtue ethics, the branch of ethics centered on personal and social flourishing. Ranging across the central elements of Thoreau's philosophy—life, virtue, economy, solitude, and society, nature, and politics—Cafaro shows Thoreau developing a comprehensive virtue ethics less based in ancient philosophy than many recent efforts and more grounded in modern life and experience. He presents Thoreau's evolutionary, experimental ethics as superior to the more static, foundational efforts of current virtue ethicists. Another main focus is Thoreau's environmental ethics. The book shows Thoreau not only anticipating recent arguments for wild nature's intrinsic value but also demonstrating how a personal connection to nature furthers self-development, moral character, knowledge, and creativity. Thoreau's life and writings, argues Cafaro, present a positive life-affirming environmental ethics combining respect and restraint with an appreciation for human possibilities for flourishing within nature.

*Faking Nature* Robert Elliot, 2008-02-21 *Faking Nature* explores the arguments surrounding the concept of ecological restoration. This is a crucial process in the modern world and is central to companies' environmental policy: whether areas restored after ecological destruction are less valuable than before the damage took place. Elliot discusses the pros and cons of the argument and examines the role of humans in the natural world. This volume is a timely and provocative analysis of the simultaneous destruction and restoration of the natural world and the ethics related to those processes in an era of

accelerated environmental damage and repair      Managing Protected Areas Michael Lockwood, Graeme Worboys, Ashish Kothari, 2012-05-04 This handbook produced by world renowned experts from the World Conservation Union IUCN spans the full terrain of protected area management and is the international benchmark for the field. The book employs dozens of detailed international case studies, hundreds of concise topical snapshots, maps, tables, illustrations, and a colour plate section as well as evaluation tools, checklists, and numerous appendices to cover all aspects of park management from biodiversity to natural heritage to financial management. The book establishes a conceptual underpinning for protected area management, presents guiding principles for the 21st century, reflects recent work on international best practice, and provides an assessment of skills required by professionals. As the most authoritative guide ever compiled to the principles and practice of protected area management, this volume is essential for all professionals and students in all countries and contexts.

**Management Planning for Nature Conservation** Mike Alexander, 2012-12-05 The first edition of Mike Alexander's *Management Planning for Nature Conservation* brought a new dimension to the modern literature on conservation management. This second edition is a significant enhancement of the original, dealing with the development both conceptually and practically of adaptive management planning for nature conservation. It is about preparing management plans and guides the reader through the entire process. Case studies including a conservation and access plan demonstrate the planning process in action. This approach to planning can be applied to any place which is managed entirely or in part for wildlife. It can be applied to the management of species or habitats in any circumstance regardless of site designation. The process is fully compatible with the Convention on Biological Diversity's ecosystem approach to conservation management. Mike Alexander has long been at the forefront of developing management planning for conservation, with experience ranging from Uganda to Estonia and from Costa Rica to Wales. He is the General Secretary of the Conservation Management System Consortium, a group of organisations with a common aim of raising standards and developing best practice in conservation management and planning. In 2012, Mike Alexander was elected a Fellow of the Society of Biology in recognition of his contribution to nature conservation and in particular management planning. This book has drawn on the experiences and expertise of the CMS consortium and other leaders in both conservation research and wildlife management from around the world. It is essential reading for professional conservation managers and any student studying management planning for conservation within a range of degree and postgraduate courses.

*A Sense of Wonder Towards Nature* Haydn Washington, 2018-08-06 Environmental scientist and writer Haydn Washington argues that we will not solve the environmental crisis unless we change our worldview and ethics, and to do so we must rejuvenate our sense of wonder at nature. This book focuses on humanity's relation with nature and the sense of wonder and belonging common to indigenous cultures and children everywhere. Drawing on events in the author's own four decades working to protect wild places and the current literature on wonder, it examines what a sense of wonder is, what it has been called in different cultures, and our high points of wonder at

nature It also looks at the Great Divide in worldview between anthropocentrism and ecocentrism and considers the problem of anthropocentric theory in academia arguing that the focus should instead be on harmony with nature The book concludes with an examination of why wonder has become buried in Western society and considers ways in which it can be revived including rituals and education It also considers how wonder helps humanity to become whole The final chapter presents the road back to wonder and how wonder towards nature can be restored in Western society This book will be of great interest to environmental scientists conservation biologists environmental philosophers and ecological ethicists as well as environmentalists educators eco psychologists and students looking at sustainability deep ecology and environmental philosophy and ethics
