The Nature of Reston Charles A. Veatch, Claudia Thompson-Deahl, 1999 The Nature of Mathematical Thinking Robert J. Sternberg, Talia Ben-Zeev, 2012-10-12 Why do some children seem to learn mathematics easily and others slave away at it learning it only with great effort and apparent pain Why are some people good at algebra but terrible at geometry How can people who successfully run a business as adults have been failures at math in school How come some professional mathematicians suffer terribly when trying to balance a checkbook And why do school children in the United States perform so dismally in international comparisons These are the kinds of real questions the editors set out to answer or at least address in editing this book on mathematical thinking Their goal was to seek a diversity of contributors representing multiple viewpoints whose expertise might converge on the answers to these and other pressing and interesting questions regarding this subject The chapter authors were asked to focus on their own approach to mathematical thinking but also to address a common core of issues such as the nature of mathematical thinking how it is similar to and different from other kinds of thinking what makes some people or some groups better than others in this subject area and how mathematical thinking can be assessed and taught Their work is directed to a diverse audience psychologists interested in the nature of mathematical thinking and abilities computer scientists who want to simulate mathematical thinking educators involved in teaching and testing mathematical thinking philosophers who need to understand the qualitative aspects of logical thinking anthropologists and others interested in how and why mathematical thinking seems to differ in quality across cultures and laypeople and others who have to think mathematically and want to understand how they are going to accomplish that feat

Some of these have been successful first steps in increasing enrollment in algebra and in broadening the scope of the algebra curriculum Others have compounded existing problems Algebra is not yet conceived of as a K 14 subject Issues of opportunity and equity persist Because there is no one answer to the dilemma of how to deal with algebra making progress requires sustained dialogue experimentation reflection and communication of ideas and practices at both the local and national levels As an initial step in moving from national level dialogue and speculations to concerted local and state level work on the role of algebra in the curriculum the MSEB and the NCTM co sponsored a national symposium The Nature and Role of Algebra in the K 14 Curriculum on May 27 and 28 1997 at the National Academy of Sciences in Washington D C

The turn of the 1960s 70s characterized by the rapid acceleration of globalization prompted a radical transformation in the perception of urban and natural environments. The urban revolution and related prospect of the total urbanisation of the planet in concert with rapid population growth and resource exploitation instigated a surge in environmental awareness and activism One implication of this moment is a growing recognition of the integration and interconnection of natural and urban entities. Using cases studies from around the globe the collection offers a historical and theoretical understanding of a paradigmatic shift whose material and symbolic legacies are still accompanying us in the early 21st century
